San Diego New York Berkeley Boston
London Sydney Tokyo Toronto

Contents

<i>Preface</i>	<i>xi</i>
<i>Symbols</i>	<i>xv</i>
Chapter 1 Introduction	
1.1 Scope of Micrometeorology	1
1.2 Micrometeorology versus Microclimatology	3
1.3 Importance and Applications of Micrometeorology	4
Problems and Exercises	8
Chapter 2 Energy Budget near the Surface	
2.1 Energy Fluxes at an Ideal Surface	9
2.2 Energy Balance Equations	10
2.3 Some Examples of Energy Budget	15
2.4 Applications	19
Problems and Exercises	19
Chapter 3 Radiation Balance near the Surface	
3.1 Radiation Laws and Definitions	21
3.2 Shortwave Radiation	24
3.3 Longwave Radiation	29
3.4 Radiation Balance near the Surface	30
3.5 Radiative Flux Divergence	33
3.6 Applications	35
Problems and Exercises	35

Chapter 4 Soil Temperatures and Heat Transfer

4.1	Surface Temperature	37
4.2	Subsurface Temperatures	39
4.3	Thermal Properties of Soils	40
4.4	Theory of Soil Heat Transfer	41
4.5	Applications	46
	Problems and Exercises	46

Chapter 5 Air Temperature and Humidity in the PBL

5.1	Factors Influencing Air Temperature and Humidity	49
5.2	Basic Thermodynamic Relations and Definitions	50
5.3	Static Stability	54
5.4	Mixed Layers and Inversions	57
5.5	Vertical Temperature and Humidity Profiles	58
5.6	Diurnal Variations	61
5.7	Applications	63
	Problems and Exercises	64

Chapter 6 Wind Distribution in the PBL

6.1	Factors Influencing Wind Distribution	67
6.2	Geostrophic and Thermal Winds	68
6.3	The Effects of Friction	71
6.4	The Effects of Stability	74
6.5	Observed Wind Profiles	75
6.6	Diurnal Variations	81
6.7	Applications	84
	Problems and Exercises	84

Chapter 7 An Introduction to Viscous Flows

7.1	Inviscid and Viscous Flows	87
7.2	Laminar and Turbulent Flows	90
7.3	Equations of Motion	91
7.4	Plane-Parallel Flows	93
7.5	Ekman Layers	95
7.6	Developing Boundary Layers	99
7.7	Heat Transfer in Fluids	103
7.8	Applications	106
	Problems and Exercises	106

Chapter 8 Fundamentals of Turbulence

8.1	Instability of Flow and Transition to Turbulence	109
8.2	The Generation and Maintenance of Turbulence	113
8.3	General Characteristics of Turbulence	114
8.4	Mean and Fluctuating Variables	115
8.5	Variances and Turbulent Fluxes	117
8.6	Eddies and Scales of Motion	119
8.7	Applications	121
	Problems and Exercises	121

Chapter 9 Semiempirical Theories of Turbulence

9.1	Mathematical Description of Turbulent Flows	123
9.2	Gradient-Transport Theories	128
9.3	Dimensional Analysis and Similarity Theories	133
9.4	Applications	139
	Problems and Exercises	139

Chapter 10 Neutral Boundary Layers

10.1	Velocity-Profile Laws	141
10.2	Surface Roughness Parameters	148
10.3	Surface Stress and Drag Coefficient	152
10.4	Turbulence	153
10.5	Applications	154
	Problems and Exercises	155

Chapter 11 Momentum and Heat Exchanges with Homogeneous Surfaces

11.1	The Monin–Obukhov Similarity Theory	157
11.2	Empirical Forms of Similarity Functions	161
11.3	Wind and Temperature Profiles	166
11.4	Drag and Heat Transfer Coefficients	167
11.5	Methods of Determining Momentum and Heat Fluxes	169
11.6	Applications	179
	Problems and Exercises	179

Chapter 12 Evaporation from Homogeneous Surfaces

12.1	The Process of Evaporation	183
12.2	Potential Evaporation and Evapotranspiration	184
12.3	Modified Monin–Obukhov Similarity Relations	186
12.4	Micrometeorological Methods of Determining Evaporation	189
12.5	Applications	195
	Problems and Exercises	195

Chapter 13 Marine Atmospheric Boundary Layer

13.1	Sea-Surface Characteristics	197
13.2	Momentum Transfer to the Sea Surface	203
13.3	Parameterization of Air–Sea Exchanges	211
13.4	Mean Profiles in the Marine Atmospheric Boundary Layer	214
13.5	Turbulence over Water	219
13.6	Applications	220
	Problems and Exercises	221

Chapter 14 Nonhomogeneous Boundary Layers

14.1	Types of Surface Inhomogeneities	223
14.2	Step Changes in Surface Roughness	224
14.3	Step Changes in Surface Temperature	231
14.4	Air Modifications over Water Surfaces	235
14.5	Air Modifications over Urban Areas	237
14.6	Building Wakes and Street Canyon Effects	245
14.7	Other Topographical Effects	252
14.8	Applications	259
	Problems and Exercises	260

Chapter 15 Agricultural and Forest Micrometeorology

15.1	Flux-Profile Relations above Plant Canopies	263
15.2	Radiation Balance within Plant Canopies	266
15.3	Wind Distribution in Plant Canopies	271
15.4	Temperature and Moisture Fields	273
15.5	Turbulence in Plant Canopies	277
15.6	Applications	282
	Problems and Exercises	284
