Contents

Preface to Second Edition xii
Preface to First Edition xiii
Symbols xvii

Chapter 1 Introduction 1

1.1 Scope of Micrometeorology 1
1.2 Micrometeorology versus Microclimatology 5
1.3 Importance and Applications of Micrometeorology 6
Problems and Exercises 9

Chapter 2 Energy Budget Near the Surface 11

2.1 Energy Fluxes at an Ideal Surface 11
2.2 Energy Balance Equations 12
2.3 Energy Budgets of Bare Surfaces 19
2.4 Energy Budgets of Canopies 20
2.5 Energy Budgets of Water Surfaces 25
2.6 Applications 25
Problems and Exercises 26

Chapter 3 Radiation Balance Near the Surface 28

3.1 Radiation Laws and Definitions 28
3.2 Shortwave Radiation 32
3.3 Longwave Radiation 36
3.4 Radiation Balance near the Surface 38
3.5 Observations of Radiation Balance 39
3.6 Radiative Flux Divergence 41

3.7 Applications 43
Problems and Exercises 44

Chapter 4 Soil Temperatures and Heat Transfer 46

4.1 Surface Temperature 46
4.2 Subsurface Temperatures 47
4.3 Thermal Properties of Soils 48
4.4 Theory of Soil Heat Transfer 51
4.5 Thermal Wave Propagation in Soils 52
4.6 Measurement and Parameterization of Ground Heat Flux 56
4.7 Applications 60
Problems and Exercises 60

Chapter 5 Air Temperature and Humidity in the PBL 62

5.1 Factors Influencing Air Temperature and Humidity 62
5.2 Basic Thermodynamic Relations and the Energy Equation 63
5.3 Local and Nonlocal Concepts of Static Stability 71
5.4 Mixed Layers, Mixing Layers and Inversions 77
5.5 Vertical Temperature and Humidity Profiles 78
5.6 Diurnal Variations 82
5.7 Applications 85
Problems and Exercises 86

Chapter 6 Wind Distribution in the PBL 89

6.1 Factors Influencing Wind Distribution 89
6.2 Geostrophic and Thermal Winds 89
6.3 Friction Effects on the Balance of Forces 95
6.4 Stability Effects on the PBL Winds 99
6.5 Observed Wind Profiles 101
6.6 Diurnal Variations 107
6.7 Applications 109
Problems and Exercises 110

Chapter 7 An Introduction to Viscous Flows 113

7.1 Inviscid and Viscous Flows 113
7.2 Laminar and Turbulent Flows 116

7.3 Navier–Stokes Equations of Motion 117
7.4 Laminar Plane-Parallel Flows 119
7.5 Laminar Ekman Layers 124
7.6 Developing Laminar Boundary Layers 132
7.7 Heat Transfer in Laminar Flows 136
7.8 Applications 139
Problems and Exercises 139

Chapter 8 Fundamentals of Turbulence 142

8.1 Instability of Flow and Transition to Turbulence 142
8.2 The Generation and Maintenance of Turbulence 146
8.3 General Characteristics of Turbulence 147
8.4 Mean and Fluctuating Variables 149
8.5 Variances and Turbulent Fluxes 152
8.6 Eddies and Scales of Motion 155
8.7 Fundamental Concepts, Hypotheses, and Theories 156
8.8 Applications 160
Problems and Exercises 161

Chapter 9 Models and Theories of Turbulence 163

9.1 Mathematical Models of Turbulent Flows 163
9.2 Gradient-transport Theories 171
9.3 Dimensional Analysis and Similarity Theories 177
9.4 Applications 185
Problems and Exercises 185

Chapter 10 Near-neutral Boundary Layers 188

10.1 Velocity-profile Laws 188
10.2 Surface Roughness Parameters 197
10.3 Surface Drag and Resistance Laws 203
10.4 Turbulence 208
10.5 Applications 211
Problems and Exercises 211

Chapter 11 Thermally Stratified Surface Layer 213

11.1 The Monin–Obukhov Similarity Theory 213

11.2 Empirical Forms of Similarity Functions 217
11.3 Wind and Temperature Profiles 223
11.4 Drag and Heat Transfer Relations 224
11.5 Methods of Determining Momentum and Heat Fluxes 226
11.6 Applications 239
Problems and Exercises 239

Chapter 12 Evaporation from Homogeneous Surfaces 242

12.1 The Process of Evaporation 242
12.2 Potential Evaporation and Evapotranspiration 243
12.3 Modified Monin–Obukhov Similarity Relations 245
12.4 Micrometeorological Methods of Determining Evaporation 248
12.5 Applications 264
Problems and Exercises 264

Chapter 13 Stratified Atmospheric Boundary Layers 266

13.1 Types of Atmospheric Boundary Layers 266
13.2 Similarity Theories of the PBL 270
13.3 Mathematical Models of the PBL 277
13.4 Parameterization of the PBL 310
13.5 Applications 317
Problems and Exercises 317

Chapter 14 Nonhomogeneous Boundary Layers 321

14.1 Types of Surface Inhomogeneities 321
14.2 Step Changes in Surface Roughness 322
14.3 Step Changes in Surface Temperature 328
14.4 Air Modifications over Water Surfaces 334
14.5 Air Modifications over Urban Areas 336
14.6 Building Wakes and Street Canyon Effects 346
14.7 Other Topographical Effects 353
14.8 Applications 362
Problems and Exercises 362

Chapter 15 Agricultural and Forest Micrometeorology 365

15.1 Flux-profile Relations above Plant Canopies 365
15.2 Radiation Balance within Plant Canopies 370

15.3 Wind Distribution in Plant Canopies 375
15.4 Temperature and Moisture Fields 378
15.5 Turbulence in and above Plant Canopies 381
15.6 Applications 388
Problems and Exercises 389
