Contents

Introduction	7
List of symbols	11
Chapter 1. Thermodynamics of the atmosphere	19
Chapter 2. Hydrostatics	73
Chapter 3. Atmospheric dynamics	95
Chapter 4. Condensation and precipitation processes	135
Chapter 5. Radiation in the atmosphere	163

Chapter 1. Thermodynamics of the atmosphere

1. Thermodynamic state and state variables for a pure substance 21
- 1.2 Mixtures of gases or liquids 24
- 1.3 Thermodynamic processes. The first law of thermodynamics 26
- 1.4 Ideal gases 27
- 1.5 Ideal gas mixtures 32
- 1.6 Thermodynamics applied to the atmosphere 35
- 1.7 Composition of the atmosphere. Dry air 39
- 1.8 Thermodynamic diagrams for dry air 43
- 1.9 The water substance 47
- 1.10 Moist air 53
- 1.11 Humidity measures 60
- 1.12 Thermodynamic charts for moist air 65
- 1.13 Adiabatic processes for moist air. Pseudo wet-bulb and wet-bulb potential temperature 67

Chapter 2. Hydrostatics

- 2.1 The hydrostatic equation 74
- 2.2 The variation with height of the state variables 76
- 2.3 Static stability in non-saturated air 77
- 2.4 Static stability in saturated air 80
- 2.5 The temperature-sounding curve 81
- 2.6 On motions in stable and unstable air 84
- 2.7 Processes leading to changes in the static stability 84
- 2.8 Geopotential height 86
- 2.9 The thickness of isobaric layers 88
- 2.10 Determination of the geopotential height of isobaric surfaces 91
- 2.11 Reduction of the atmospheric pressure to mean sea level 92
- 2.12 The barometer as altimeter 93

Chapter 3. Atmospheric dynamics

- 3.1 Motions on the rotating Earth 96
- 3.2 Gravity, tidal force, and Coriolis force 99
- 3.3 The equation of motion 101
- 3.4 Equation of continuity 104
- 3.5 Classification of atmospheric motion systems 104
- 3.6 Turbulence 107
- 3.7 Turbulent transport of momentum, heat and humidity between atmospheric layers 109
- 3.8 Convection 112
- 3.9 The large scale motion systems 114
- 3.10 Simplified, quasi-static dynamics of the large-scale motions 115
- 3.11 The horizontal Coriolis force 117
- 3.12 The horizontal pressure force 118
- 3.13 Geostrophic wind 122
- 3.14 The wind in the free atmosphere 124
- 3.15 The force of turbulent friction and the wind in the planetary boundary layer 127
- 3.16 Formation of large-scale vortices 128
- 3.17 Numerical models of the atmosphere 132

Chapter 4. Condensation and precipitation processes

- 4.1 Pure water droplets in equilibrium with moist air 136
- 4.2 Particles in the atmosphere 139
- 4.3 Solution effect 142
- 4.4 Köhler's diagram 143
- 4.5 Droplet growth in water clouds by condensation and coalescence 148
- 4.6 The formation of ice particles 152
- 4.7 Mixed clouds and ice clouds 154
- 4.8 Release of precipitation 155
- 4.9 Artificial seeding of supercooled water clouds 156
- 4.10 Processes causing the relative humidity to increase 157

Chapter 5. Radiation in the atmosphere

- 5.1 Description of a radiation field 164
- 5.2 Basic laws of radiation 169
- 5.3 Solar radiation 174
- 5.4 The attenuation of the solar radiation in the atmosphere 178
- 5.5 Solar radiation at the earth's surface 186
- 5.6 Terrestrial radiation 188
