Contents

<i>Preface</i>	xi
<i>Chapter 1 Introduction</i>	1
Spaceborne Remote Sensing in Earth and Planetary Studies	1
Illustrative Examples in Planetary Geoscientific Sensing • Future Outlook in Spaceborne Remote Sensing • Remote Sensing Across the Electromagnetic Spectrum	
Types of Spaceborne Radar Sensors	5
Atmospheric Limitations	7
Book Plan	8
PART I IMAGING RADARS	9
<i>Chapter 2 Wave-Surface Interactions and Geoscientific Application</i>	11
Wave-Surface Interactions	11
Surface Scattering Models • Absorption Losses and Volume Scattering • Effects of Polarization • Effects of the Frequency • Effects of the Incidence Angle • Scattering from Natural Terrain • Scattering from the Ocean Surface	
Solid Surface Sensing	26
Geologic Mapping • Subsurface Penetration • Vegetation and Soil Moisture Mapping • Land Use and Man-Made Features • Planetary Applications	
Oceanographic and Polar Ice Applications	38
Surface Waves • Internal Waves • Eddies • Rain Cells • Currents • Bathymetric Features • Ship Wakes • Polar Ice • Glaciers and Ice Sheets	
<i>Chapter 3 Principle and Theory</i>	51
Basic Principles	51

Antenna Beam Properties • Antenna Array • Signal Properties: Single Pulse • Pulse Modulation: Chirp • Pulse Modulation: Binary • Periodic Signals Properties • Doppler Properties

Real Aperture Radars 63

Imaging Geometry • Range Resolution • Azimuth Resolution • Radar Equation • Fading and Speckle: General Properties • Fading and Speckle Statistics • Geometric Distortion

Synthetic Aperture Radars 72

Synthetic Array Approach • Focused vs Unfocused SAR • Doppler Synthesis Approach • SAR Imaging Coordinate System Ambiguities • Range Migration • Speckle in SAR Images • Earth Rotation and Moving Targets Effects • Ionospheric and Turbulence Effects • Burst Mode SAR • Spotlight Mode SAR

Chapter 4 End-to-End System Design

85

Signal Generation 85

Generation of High-Frequency Signals • Signal Modulation • Elements of Signal Generation Chain • Signal Parameters Selection

Signal Radiation and Collection 92

Antenna Gain • Antenna Sidelobes and Integrated Range Ambiguity Noise

Signal Reception and Data Handling 96

Signal Digitization • Data Buffering • On Board vs Ground Decoding • Data Recording and Transmission

Data Processing 103

Attitude Errors Compensation • Earth Rotation Effects • Orbit Ellipticity • Range Curvature • Depth of Focus • Processor Complexity

System Design and Parameters Tradeoff 109

Relationships and Flow Diagram • Case of the Seasat SAR (1978) • Case of SIR-B: Variable Illumination (1984) • Case of Magellan SAR: Elliptical Orbit (1990) • Case of SIR-C: Distributed SAR (1990)

Chapter 5 SAR Data Processing

127

Basic Principles 127

SAR Signals Spectra • Point Target Response • Attitude Drift Effect • Effect of Planetary Rotation • Effect of Orbit Ellipticity • Correlation with Point Target Response

Digital Processing Algorithms and Processor Architecture 136

Phased Array Formation Approach • Time Domain Correlation • Frequency Domain Correlation • SAW Azimuth Compression • Deramp Approach • Clutterlocking • Autofocusing

Optical Processing 145

Fresnel Zone Plate Properties • Simplified Description of SAR Optical Processing • Range Migration Correction • Hybrid Processing

Post-Processing 151

Geometric Rectification • Radiometric Rectification and Calibration • Multichannel Data Registration • Synthesized Multipolarization Imagery • Multisensor Registration • Image Spectra

PART II ALTIMETERS 163

Chapter 6 Geoscientific Applications of Altimeters 165

Oceanographic Applications 165

Geoid Measurement • Surface Currents Effects • Surface Waves • Surface Wind

Solid Surface Topography Mapping 170

Topographic Mapping Techniques • Data Display Techniques • Multidata Sets Analysis

Chapter 7 Altimeter Principles and Techniques 177

Measurement Techniques 177

Beam Limited and Pulse Limited Altimeters • Synthetic Aperture Radar Altimeters • Imaging Altimeters • Echo Shape Analysis • Measurement Errors

Sensor and Processor Description 192

Sensor and Processor Elements • The Seasat Altimeter • Scanning Radar Altimeter

PART III SCATTEROMETERS 199

Chapter 8 Geoscientific Applications 201

Global Wind Measurement Over the Ocean Surface 201

Relationship Between the Wind Velocity and the Radar Backscatter • Observations Required

Solid Surface Sensing	204
Scattering from Tropical Forests • Soil Moisture Mapping • Global Scattering Statistics	
<i>Chapter 9 Principle and Techniques</i>	209
Side Looking Scatterometers	209
Basic Principle • Measurement Accuracy	
Forward (or Backward) Looking Scatterometers	214
Basic Principle • Time Delay (Pulsed) Approach • Doppler Filtering Approach • Effect of the Planet Rotation	
Squint-Looking Scatterometer	221
Pulsed Approach • Doppler Approach	
Pencil Beam Scatterometer	225
Description of Spaceborne Scatterometer Systems	228
Seasat Scatterometer • NSCAT	
<i>Appendix Characteristics of Some Recent and Planned Spaceborne Radar Sensors</i>	233
<i>References and Relevant Literature</i>	237
<i>Index</i>	253
<i>About the Author</i>	255
