# *Energy and The Atmosphere*

## A Physical-Chemical Approach

Ian M. Campbell

*School of Chemistry  
University of Leeds*

JOHN WILEY & SONS LTD

London • New York • Sydney • Toronto

## *Contents*

Preface . . . . .	vii
<b>Chapter 1 The Earth as a Planet . . . . .</b>	<b>1</b>
1.1 The Vital Factors . . . . .	1
1.2 The Other Planets . . . . .	2
1.3 Evolution of the Atmosphere of the Earth . . . . .	11
1.4 Projections for Future Evolution of the Earth's Atmosphere . . . . .	18
<b>Chapter 2 The Natural Energy Balance of the Earth . . . . .</b>	<b>19</b>
2.1 Factors Modifying the Solar Irradiance . . . . .	19
2.2 Dispersal of Solar Irradiance in the Earth-Atmosphere System . . . . .	29
2.3 Quantitative Evaluation of the Surface Solar Irradiance . . . . .	37
2.4 The Scale of Solar Energy . . . . .	39
<b>Chapter 3 The Gross Structure of the Earth's Atmosphere . . . . .</b>	<b>42</b>
3.1 Atmospheric Layer Resolution . . . . .	43
3.2 The Troposphere . . . . .	45
3.3 The Stratosphere . . . . .	47
3.4 The Mesosphere . . . . .	54
3.5 The Thermosphere . . . . .	56
3.6 Conclusion . . . . .	57
<b>Chapter 4 The Photosynthetic Origin of Fuels . . . . .</b>	<b>59</b>
4.1 The Overall Energy Efficiency of Photosynthesis . . . . .	59
4.2 The Role of the Pigments . . . . .	62
4.3 The Post-photochemical Reactions . . . . .	64
4.4 The Actual Efficiency of Solar Energy Storage by Plants . . . . .	74
4.5 Potential Annual Photosynthesis Rates . . . . .	75
<b>Chapter 5 Combustion and Fuels . . . . .</b>	<b>78</b>
5.1 Fuels . . . . .	78
5.2 Synthetic Fuels . . . . .	82
5.3 Thermodynamics of Combustion Systems . . . . .	91
5.4 Kinetics of Combustion Systems . . . . .	101

5.5 The Exhaust Expansion of Combustion Products . . . . .	113
5.6 Conclusion . . . . .	125
<b>Chapter 6 The Realization of Energy . . . . .</b>	<b>127</b>
6.1 The Internal Combustion Cycles . . . . .	127
6.2 Static Power Generation . . . . .	149
6.3 The Fluidized-bed Combustor . . . . .	153
6.4 Fuel Cells . . . . .	159
6.5 Concluding Remarks . . . . .	178
<b>Chapter 7 The Major Cycles of the Atmosphere . . . . .</b>	<b>180</b>
7.1 The Water-Hydrogen Cycle . . . . .	181
7.2 The Carbon Cycle . . . . .	187
7.3 The Oxygen Cycle . . . . .	195
7.4 The Nitrogen Cycle . . . . .	198
7.5 The Sulphur Cycle . . . . .	202
7.6 Concluding Remarks . . . . .	209
<b>Chapter 8 Photochemistry of the Polluted Troposphere . . . . .</b>	<b>211</b>
8.1 The Need for Photochemical Activation . . . . .	211
8.2 Basic Photochemical Considerations . . . . .	214
8.3 The Rates of Photodissociation Processes in the Troposphere . . . . .	236
8.4 The Overall Chemistry of Photochemical Smog . . . . .	247
8.5 The Photooxidation of Sulphur Dioxide . . . . .	274
8.6 Tropospheric Aerosols . . . . .	282
8.7 Concluding Remarks . . . . .	288
<b>Chapter 9 Neutral Chemistry of the Upper Atmosphere . . . . .</b>	<b>290</b>
9.1 The Upper Atmosphere as a Chemical Reactor . . . . .	291
9.2 Primary Photochemistry of the Upper Atmosphere . . . . .	300
9.3 Secondary Chemistry of the Stratosphere . . . . .	316
9.4 Potential Anthropogenic Perturbations of Stratospheric Chemistry . . . . .	334
9.5 Biological Effects of Ultraviolet Radiation . . . . .	344
9.6 Chemistry of the Atmosphere above the Stratopause . . . . .	350
9.7 Concluding Remarks . . . . .	373
<b>Chapter 10 Ionic Species in the Mesosphere and Lower Thermosphere . . . . .</b>	<b>375</b>
10.1 Primary Photoionization in the Lower Ionosphere . . . . .	375
10.2 The Major Positive Ionic Species in the Mesosphere . . . . .	377
10.3 The Major Negative Ionic Species in the Mesosphere . . . . .	380
<b>References . . . . .</b>	<b>383</b>
<b>Appendix Reaction Numbering Scheme and Reaction Index . . . . .</b>	<b>385</b>
<b>Index . . . . .</b>	<b>388</b>
