<b>Preface</b>	<b>5</b>
<b>I Theory and Concepts</b>	<b>15</b>
<b>1. Introduction to Clear and Cloudy Boundary Layers</b>	<b>17</b>
1 The Place of the Atmospheric Boundary Layer	18
1.1 Boundary layer as a disturbance in the otherwise-stable troposphere	18
1.2 Boundary layer interactions with the large scale flow	21
1.3 Typical diurnal evolution of the boundary layer	22
2 Thermodynamics and Stability	24
2.1 Theta versus $z$ thermodynamic diagram	24
2.2 Static stability redefined	26
3 Basic Governing Equations and the Closure Problem	27
4 Turbulence and the Boundary Layer Interior	30
4.1 Turbulence Kinetic Energy budget	30
4.2 Measures of dynamic stability	32
4.3 The boundary layer interior	33
4.4 Approximations	37
5 BL Interactions with the Surface	37
5.1 Effective surface fluxes	37
5.2 Transport velocity — the making of a flux	38
5.3 Feedback, a basis for Monin-Obukhov similarity theory	39
5.4 Similarity scales from external forcings and constraints	40
6 Conclusions	41
<b>2. Turbulence and Similarity Theory in Meteorology and Engineering</b>	<b>43</b>
1 Introduction	43
2 Similarity Theory	45
2.1 Atmospheric Turbulence	45
2.2 Comparison with Engineering Turbulence	48
3 Surface Layer Velocity Profiles	49
3.1 Neutral surface layer	49

3.2	Diabatic surface layer	54
4	Surface-layer Turbulence	55
4.1	Neutral surface layer	55
4.2	Diabatic surface layer	57
5	Neutral boundary layer	59
6	Convective boundary layer	60
7	Stable boundary layer	62
8	Final Remarks	66
<b>3.</b>	<b>Large Eddy Simulation of Atmospheric Boundary Layers</b>	<b>67</b>
1	Introduction	67
2	Overview of Large Eddy Simulation (LES)	68
2.1	The governing equations	68
2.2	Weaknesses of LES	70
2.3	Strengths of LES	71
3	What Has LES Taught Us?	72
4	Recent Progress in PBL LES Research	77
4.1	Improvements in SGS modeling	77
4.2	Implementation of nested-grid LES	77
4.3	Inclusion of radiation and microphysics for cloudy PBLs	78
4.4	Application to different PBL flow regimes	80
4.5	Development of PBL parameterizations	81
5	Concluding Remarks	82
<b>4.</b>	<b>Modelling of Atmospheric Boundary Layers</b>	<b>85</b>
1	Introduction	85
2	Classic Mixing Approaches	86
2.1	Local mixing and turbulent kinetic energy	86
2.2	Budgets of Fluxes and Covariances	88
3	Mixing in stably stratified conditions	90
3.1	Theory and simplifications	90
3.2	Observations	92
3.3	Simulation and Modelling	94
4	Mixing in dry convective boundary layers	96
4.1	Modelling the vertical transport terms	96
4.2	Simplifications for the heat flux	97
4.3	Comparison of Mixing Approaches	100

5	Generalizations and implications	103
5.1	Momentum and scalar mixing	103
5.2	Impacts of Skewness and Nonlocal Effects	104
5.3	Cloud Mixing	107
6	Discussion and conclusions	108

## **II Surface Interactions 111**

<b>5.</b>	<b>Surface fluxes and boundary layer structure</b>	<b>113</b>
1	Introduction	113
2	Surface Layer Similarity	114
2.1	Similarity assumptions	115
2.2	Aerodynamic temperature	116
2.3	Stability functions	116
2.4	Application to data	117
3	Deviations from Surface Layer Similarity Theory	117
3.1	Vanishing wind speed	118
3.2	Flux divergence	118
3.3	Roughness sublayer	119
3.4	Observational height and similarity theory	121
4	Outer Layer	123
5	Stable boundary layer	125
5.1	Weakly stable	125
5.2	Very stable	127
6	Conclusions	128
<b>6.</b>	<b>The atmospheric boundary layer over melting glaciers</b>	<b>129</b>
1	Introduction	129
2	Field experiments and data sources	131
3	Occurrence of the glacier wind	132
4	Vertical structure of the glacier wind - observations	135
5	Vertical structure of the glacier wind - modelling	140
6	Surface fluxes	144
7	Deriving Fluxes with a modified Prandtl model	147

8	The Prandtl model with flow-dependent eddy diffusivity	149
<b>7.</b>	<b>Boundary Layer Processes and Land Surface Interactions on the Mesoscale</b>	<b>155</b>
1	Introduction	155
2	Analytic studies	156
3	Heterogeneous landscape and convective boundary layers	160
3.1	Surface boundary conditions and initialization	162
3.2	Observational and model evaluation of mesoscale fluxes	163
4	Heterogeneous landscape and cumulus convection	168
5	Development of mesoscale fluxes	171
5.1	Parameterization of landscape effects on sensible and latent fluxes	171
5.2	Validation of parameterization	174
6	Conclusions	174

### **III Clouds and Radiation 177**

<b>8.</b>	<b>Observations of Cloudy Boundary Layers</b>	<b>179</b>
1	Introduction	179
2	Recent Observations of Marine Stratocumulus	181
2.1	FIRE	181
2.2	ASTEX	182
2.3	Other Studies	183
2.4	Remote Sensing of Boundary Layer Clouds	184
3	Processes Explored	187
3.1	Cloud-Top Entrainment Instability	187
3.2	Diurnal Variations	190
3.3	Decoupling	191
3.4	Mesoscale Circulations	193
3.5	Drizzle and Cloud Microphysics	195
3.6	Cloud Transitions	196
3.7	Continental Cloud Processes	197
4	Summary Remarks	198
<b>9.</b>	<b>Dynamics of Cloudy Boundary Layers</b>	<b>199</b>
1	Introduction	199

2	Is there a Spectral Gap ?	200
3	Boundary Layer Scaling and Parametrizations	202
3.1	Convective Scaling	202
3.2	Entrainment	203
3.3	Mass flux approach	204
4	Stratocumulus-Topped Boundary Layer	205
4.1	Processes	205
4.2	Scaling	207
4.3	Dynamics: Decoupling and Entrainment	209
4.4	Mass Flux Approach	212
5	Cumulus	214
6	Concluding Remarks	217
<b>10.</b>	<b>Mesoscale Cellular Convection during Cold Air Outbreaks: A numerical study</b>	<b>219</b>
1	Introduction	219
2	Very large eddy modelling	222
3	Simulation of a cold air outbreak	224
3.1	Observations and model input	224
3.2	Model results	227
4	Towards the understanding of cell broadening	232
4.1	Experiment 1: No formation of liquid water	233
4.2	Experiment 2: No latent heat release	235
4.3	Experiment 3: No long-wave radiation processes	236
4.4	Experiment 4: Increased radiative cloud-top cooling	236
5	Summary and conclusions	237
<b>11.</b>	<b>Extratropical Cloud Systems and Cloud Radiative Forcing</b>	<b>241</b>
1	Introduction	241
2	Cloud radiative forcing (CRF)	243
2.1	Definitions and data	243
2.2	Observations	244
3	Cloud radiative forcing and extratropical clouds	247
4	Low-level clouds and static stability	253
5	Regional and seasonal CRF variations	259
6	Summary and Discussion	261

## IV Applications 265

<b>12. Chemistry in the Atmospheric Boundary Layer</b>	<b>267</b>
1 Introduction	267
2 Governing equation for chemically reactive species	268
2.1 Analysis of scales in the ABL	269
2.2 First- and Second-Moment Reynolds Averaged Equations	271
2.3 Segregation of species	273
3 Chemically reactive ABL	273
3.1 Surface layer	273
3.2 Convective boundary layer	276
3.3 Stable boundary layer	279
3.4 Cloudy boundary layer	281
3.5 The effect of radiation on chemistry	282
4 Large-scale implications	283
5 Conclusions	285
<b>13. Role of the Boundary Layer in a Numerical Weather Prediction Model</b>	<b>287</b>
1 Introduction	287
2 The surface layer formulation	288
3 Mixed layer and entrainment formulation	293
4 The stable boundary layer	297
5 Discussion	303
<b>14. Representation of Clear and Cloudy Boundary Layers in Climate Models</b>	<b>305</b>
1 Introduction	305
2 Physical and numerical issues	306
2.1 The surface fluxes	306
2.2 Flux profiles, the PBL depth, and vertical discretization	307
2.3 PBL clouds	310
2.4 Interactions with deep convection	310
3 Two examples of current PBL parameterizations	311
3.1 Model formulations	311
3.2 Results	314
4 Concluding discussion	319
4.1 Summary	319

4.2	New directions and recommendations	320
-----	------------------------------------	-----

## **V Reflections 323**

### **15. Boundary-Layer Modeling: History, Philosophy, and Sociology 325**

1	Introduction	325
2	Turbulence in Engineering	326
3	A Grammar of Turbulence Modeling	328
4	A Cultural Shift	329
5	The New Experimental Challenge	330
6	A Parting Thought	332
