An Introduction to

ATMOSPHERIC PHYSICS

ROBERT G. FLEAGLE

JOOST A. BUSINGER

University of Washington

Seattle, Washington

1963

ACADEMIC PRESS New York and London

Table of Contents

Preface	v
----------------	----------

CHAPTER I: GRAVITATIONAL EFFECTS

1.1	Fundamental Concepts	2
1.2	Law of Universal Gravitation	3
1.3	Newton's Laws of Motion	3
1.4	The Earth's Gravitational Field	4
1.5	The Force of Gravity	6
1.6	Geopotential	7
1.7	Satellite Orbits	8
1.8	Hydrostatic Equation	9
1.9	Distribution of Sea Level Pressure	13
1.10	Atmospheric Tides	13
	List of Symbols	17
	Problems	18
	General References	18

CHAPTER II: PROPERTIES OF ATMOSPHERIC GASES

2.1	Molecular Behavior of Gases	20
2.2	Composition of Air	21
2.3	Elementary Kinetic Theory	23
2.4	Equation of State of an Ideal Gas	25
2.5	The Velocity Distribution of Molecules	28
2.6	The Atmosphere in Equilibrium	31
2.7	Conservation of Energy	34
2.8	Conservation of Mass	36
2.9	First Law of Thermodynamics	36
2.10	Equipartition of Energy	38
2.11	Specific Heat	39
2.12	Entropy	41
2.13	Isentropic Processes and Potential Temperature	41
2.14	Static Stability	43
2.15	Thermodynamic Probability and Entropy	45
2.16	Second Law of Thermodynamics and Transfer Processes	50
2.17	Real Cases and Changes of Phase	57
2.18	Clausius-Clapeyron Equation	62

2.19	The Moist Atmosphere	63
2.20	Saturation Adiabatic Processes	65
2.21	Distribution of Temperature and Water Vapor	67
	List of Symbols	74
	Problems	75
	General References	77

CHAPTER III: PROPERTIES AND BEHAVIOR OF CLOUD PARTICLES

Part I: Growth		79
3.1	Intermolecular Forces and Surface Tension	79
3.2	Equilibrium Vapor Pressure over a Curved Surface	81
3.3	Equilibrium Vapor Pressure over Solutions	82
3.4	Distribution and Properties of Aerosols	84
3.5	Growth of Droplets by Condensation	88
3.6	Growth of Droplets by Accretion	90
3.7	Supercooling of Droplets	94
3.8	Ice Nuclei	95
3.9	Vapor Pressure of Ice and Water Particles	96
3.10	Growth of Ice Particles	98
3.11	Structure of Ice Crystals	100
3.12	Precipitation	102
3.13	Artificial Cloud Modification	108
Part II: Electrical Charge Generation and Its Effects		110
3.14	Elementary Principles of Electricity	110
3.15	Charge Separation in Clouds	112
3.16	Origin and Distribution of Ions	114
3.17	Conductivity	117
3.18	The Lightning Discharge	120
3.19	The Mean Electric Field	123
	List of Symbols	125
	Problems	126
	General References	127

CHAPTER IV: SOLAR AND TERRESTRIAL RADIATION

Part I: Principles of Radiative Transfer		129
4.1	Definitions and Concepts	129
4.2	Absorption and Emission of Radiation	132
4.3	Theory of Black-Body Radiation	134
4.4	Characteristics of Black-Body Radiation	136
4.5	The Line Spectrum	138

Part II: Radiation outside the Atmosphere	140
4.6 The Sun	140
4.7 Determination of the Solar Constant	143
4.8 Distribution of Solar Energy Intercepted by the Earth	146
4.9 Short- and Long-Wave Radiation	147
4.10 Radiation Measurements from Satellites	148
 Part III: Effects of Absorption and Emission	 152
4.11 Absorption	152
4.12 The "Atmosphere" Effect	153
4.13 Transfer of Radiation between Two Parallel Surfaces	154
4.14 Transfer of Long-Wave Radiation in a Plane Stratified Atmosphere	155
4.15 Experimental Determination of Flux Emissivity	159
4.16 Divergence of Net Radiation	161
4.17 Direct Measurement of Flux Divergence	163
 Part IV: Photochemical Processes	 165
4.18 Dissociation of Oxygen and Its Consequences	165
4.19 Photoionization	170
4.20 Airglow	172
 List of Symbols	 176
Problems	177
General References	179

CHAPTER V: TRANSFER PROCESSES AND APPLICATIONS

5.1 Energy Transfer Near the Earth's Surface	180
5.2 Heat Conduction into the Earth	182
5.3 Turbulent Transfer	182
5.4 Turbulent Transfer in the Adiabatic Atmosphere	186
5.5 Turbulent Transfer in the Diabatic Atmosphere	190
5.6 Vertical Fluxes of Heat and Water Vapor	194
5.7 Vertical Aerosol Distribution	196
5.8 Nocturnal Cooling	197
5.9 Fog Formation	199
5.10 Air Modification	203
5.11 Global Summary of Energy Transfer	208
 List of Symbols	 211
Problems	213
General References	214

CHAPTER VI: GEOMAGNETIC PHENOMENA

6.1	Magnetic Induction	216
6.2	Maxwell's Equations	220
6.3	Field of a Magnetic Dipole	222
6.4	Behavior of Plasma in Electromagnetic Fields	224
6.5	The Geomagnetic Field	229
6.6	Dynamo Theory of Geomagnetism	231
6.7	Ion Distribution	233
6.8	The Ionospheric Current	237
6.9	Particle Motion in the Magnetosphere	240
6.10	The Aurora	242
	List of Symbols	246
	Problems	247
	General References	248

CHAPTER VII: ATMOSPHERIC SIGNAL PHENOMENA

Part I:	General Properties of Waves	249
7.1	Nature of Waves	249
7.2	Phase Speed	251
7.3	Electromagnetic Waves	254
7.4	Dispersion and Group Velocity	255
Part II:	Scattering of Radiation	258
7.5	The Physical Concept	258
7.6	Complex Index of Refraction	259
7.7	Radiation Emitted by an Oscillating Dipole	264
7.8	Small Particles	266
7.9	Diffraction	267
7.10	Refraction	272
Part III:	Atmospheric Probing	276
7.11	Visual Range	276
7.12	Determination of Absorbing Constituents	278
7.13	Optical Measurement of Lapse Rate	279
7.14	Radar Investigation	282
7.15	Radio Investigation of the Ionosphere	288
7.16	Acoustic Refraction	291
7.17	The Sonic Anemometer-Thermometer	294

Part IV: Natural Signal Phenomena	295
7.18 Refraction of Light by Air	295
7.19 Refraction by Ice Crystals	298
7.20 Refraction by Water Drops	300
7.21 Naturally Occurring Atmospheric Radiowaves	302
7.22 Refraction of Sound Waves	304
Part V: Effects of Nuclear Explosions	306
7.23 Electromagnetic Radiation	307
7.24 The Shock Wave in Air	311
List of Symbols	315
Problems	316
General References	317

APPENDIX I: MATHEMATICAL TOPICS

A. Partial Differentiation	319
B. Elementary Vector Operations	320
C. Taylor Series	323
D. The Total Differential	324
E. The Exact Differential	324
F. Gauss' and Stokes' Theorems	325
G. The Potential Function	327
H. Solid Angle	328

APPENDIX II: PHYSICAL TOPICS

A. Units and Dimensions	330
B. Significant Figures	330
C. Electromagnetic Conversion Table	332
D. Table of Physical Constants	333
E. International Reference Atmosphere	334

Bibliography	335
