

ATMOSPHERIC MOTION AND AIR POLLUTION

An Introduction for Students of
Engineering and Science

RICHARD A. DOBBINS

Professor of Engineering
Brown University
Providence, Rhode Island

A WILEY-INTERSCIENCE PUBLICATION
JOHN WILEY & SONS

New York • Chichester • Brisbane • Toronto

CONTENTS

1. Aerostatics and Atmospheric Stability	1
1.1 The Hypsometric Equation	1
1.2 The Lapse Rate	4
1.3 The Static Stability of the Atmosphere	6
1.4 Potential Temperature	9
1.5 Potential Density	10
1.6 The Brunt-Väisällä Frequency	13
1.7 The Graphical Presentation of Atmospheric Data	15
References	16
Problems	16
2. Some Concepts of Atmospheric Fluid Dynamics	19
2.1 The Measurement of Acceleration in a Rotating Coordinate System	19
2.2 Equations of Fluid Motion in a Rotating Coordinate System	23
2.3 The Continuity Equation	28
2.4 Common Approximations of Atmospheric Fluid Dynamics	29
2.4.1 The Barotropic Fluid	29
2.4.2 The Hydrostatic Approximation	31
2.4.3 The Horizontal Flow Approximation	33
2.4.4 The Geostrophic Approximation	34
2.5 The Proudman-Taylor Theorem	37
References	38
Problems	38

3. The Dynamics of Vorticity	40
3.1 The Definition of Vorticity	40
3.2 The Conservation Properties of Vorticity	45
3.3 The Dynamics of Vorticity	51
3.4 The Dynamics of Vorticity in a Rotating Coordinate System	56
3.5 Vorticity in Large Scale Atmospheric Motions	58
References	60
Problems	60
4. Large Scale Wind-Pressure Systems	63
4.1 The Low Pressure (Cyclonic) System	64
4.2 The High Pressure (Anticyclonic) System	66
4.3 Further Differences Between Cyclonic and Anticyclonic Pressure Systems	67
References	69
Problems	69
5. Thermal Radiation and the Atmospheric Structure and Chemistry	71
5.1 Concepts of Radiation	72
5.2 The Equation of Radiative Transfer	79
5.3 Atmospheric Photochemistry and Thermal Structure	81
5.3.1 The Thermosphere	81
5.3.2 The Mesosphere	82
5.3.3 The Stratosphere	83
5.3.4 The Troposphere	84
5.4 The Earth's Radiation Budget and Secular Temperature Trends	84
5.5 Radiative Inversions	90
5.6 Chemical Threats to Stratospheric Ozone	91
References	93
Problems	94

6. The Atmospheric Boundary Layer	95
6.1 Reynolds Equations for Atmospheric Flows	96
6.2 Transport Concepts in a Turbulent Flow	103
6.2.1 Momentum and Heat Transport in a Turbulent Boundary Layer	103
6.2.2 The Mixing Length	106
6.2.3 The Velocity Distribution near a Surface in the Absence of Buoyancy Effects	107
6.2.4 The Enhancement of Turbulence by Effects of Buoyancy and the Richardson Numbers	111
6.3 The Neutral Barotropic Atmospheric Boundary Layer	115
6.3.1 The Equations of Motion of the Neutral, Barotropic Atmospheric Boundary Layer	116
6.3.2 The Ekman Solution	118
6.3.3 Ekman Layer Pumping and Subsidence in the Boundary Layer	122
6.3.4 The Similarity Theory for the Neutral, Barotropic Boundary Layer	126
6.4 The Convective Atmospheric Boundary Layer	129
6.4.1 The Convective Boundary Layer under Weakly Stable Stratification	130
6.4.2 The Diurnal Cycle of the Atmospheric Boundary Layer	133
6.5 Practical Concepts in Boundary Layer Meteorology	137
6.5.1 Power Law Form of the Velocity Profile	137
6.5.2 The United States Air Pollution Potential Forecast Program	138
References	139
Problems	140
7. The Motion of Buoyant Plumes	144
7.1 The Entrainment Theory for the Motion of a Bent Plume	148
7.2 Laboratory Tests and Field Observations of Plume Rise	151
7.3 Summary of Practical Formulae	154
7.4 Plume Bifurcation	155
References	156
Problems	157

8. The Community Air Pollutants	159
8.1 The Community Air Pollutants and Their Sources	161
8.2 Health Effects of Pollutants	166
8.2.1 Carbon Monoxide	167
8.2.2 Sulfur Oxides in Combination with Particulate Material	168
8.2.3 Hydrocarbons	169
8.2.4 Oxides of Nitrogen	169
8.2.5 Photochemical Oxidants	169
8.2.6 Particulate Lead Compounds	170
8.3 The Ambient Air Quality Standards	170
8.4 Photochemical Smog Reactions	171
8.4.1 The NO-NO ₂ -O ₃ Photochemical Reaction Sequence	174
8.4.2 The NO-NO ₂ Conversion	178
8.4.3 The Chemical-Meteorological Interaction of Photochemical Oxidant Pollutants	183
8.5 The Atmospheric Aerosol	184
8.5.1 Particle Size Distribution	184
8.5.2 The Optical Properties of Aerosols	188
8.5.3 The Chemical Composition of the Atmospheric Aerosol and Identification of Source Materials	193
References	195
Problems	197
9. Dispersion of Air Pollutants—Introduction	199
9.1 The Conservation of Mass in the Presence of Molecular Diffusion and Chemical Reactions	200
9.2 Some Exact Solutions for the Diffusion Equation	202
9.2.1 Unsteady Diffusion from an Instantaneous Point Source in a Quiescent Fluid	203
9.2.2 Diffusion from an Instantaneous Point Source in an Anisotropic Medium	205
9.2.3 The Instantaneous Point Source above an Impenetrable Ground Plane	205
9.2.4 Diffusion from an Instantaneous Release in a Uniform Laminar Flow	206

9.2.5 Diffusion from an Instantaneous Elevated Release in a Laminar Flow above an Impenetrable Ground Plane	206
9.3 The Eulerian Description of Turbulent Dispersion	207
9.4 The Lagrangian Description of Turbulent Dispersion	209
9.5 Some Important Experimental Results on Turbulent Dispersion	215
References	216
Problems	217
10. Dispersion of Air Pollutants—The Gaussian Plume Model	219
10.1 The Gaussian Plume Model for the Turbulent Dispersion from an Isolated Point Source	220
10.2 Multiple Point Sources with an Arbitrary Wind Direction	227
10.3 Pollutant Confinement within the Mixed Layer	229
10.4 Other Source Geometries	232
10.4.1 Line Sources	232
10.4.2 Area Sources	235
10.5 Long-Term Averaging	240
10.6 Computer Programs Employing the Gaussian Plume Method	241
10.7 The Gaussian Plume Model Compared with Observations	243
10.8 The Gaussian Puff Model for Instantaneous Releases	245
References	246
Problems	247
11. Dispersion of Pollutants—Reacting Components and Unsteady Flows	250
11.1 The Atmospheric Dispersion Equation (<i>K</i> Theory)	250
11.1.1 The Gradient-Transport Hypothesis and the Atmospheric Dispersion Equation	251
11.1.2 The Turbulent Diffusivity	255
11.1.3 Solutions to the Simplified Atmospheric Dispersion Equation	258
11.1.3.1 The <i>K</i> Theory Solutions for an Infinite Line Source	260

11.1.3.2	The <i>K</i> Theory Solution for the Semi-Infinite Area Source— Similarity Solution	262
11.1.3.3	The Semi-Infinite Area Source— Integral Method of Solution	262
11.1.4	Comparisons of Predictions of the Gaussian Plume Model and the Atmospheric Dispersion Equation	265
11.1.5	Solutions to the Atmospheric Dispersion Equation Compared to Observed Concentrations	268
11.2	Cell Models	272
11.2.1	The Dynamic Airshed Model	273
11.2.2	The Single Cell Dynamic Model	274
11.2.3	The Climatological Inverse Wind Correlation	276
11.3	Other Methods of Analysis	277
	References	278
	Problems	280
12.	Air Pollution, the Meteorological Record, and Long-Distance Transport of Pollutants	283
12.1	The Atmospheric Monitoring Network in the Contiguous United States	283
12.2	Climatological Studies of the Atmospheric Boundary Layer	286
12.3	Retrospective Studies of Air Pollution Episodes	290
12.4	Synoptic Scale Transport of Pollutants	293
12.4.1	Acid Precipitation and Sulfate Transport	293
12.4.2	Long-Distance Transport of Ozone	300
	References	303
	Problems	305
	Appendix I. Vector Identities, Vector Operators, and the Particle Derivative in Several Coordinate Systems	307
	Appendix II. Atmospheric Data	310
	Index	315
