Table of Contents

Foreword	9
Preface	11
1 Weather at Take-off	
1.1 Some examples	13
1.1.1 Temperature	14
1.1.2 Humidity	15
1.1.3 Wind	19
1.1.4 Rain	25
1.2 Weather elements	32
1.2.1 Temperature	32
1.2.2 Humidity	35
1.2.3 Wind	36
1.2.4 Rain	40
1.3 Diurnal weather changes	42
1.3.1 Temperature	42
1.3.2 Humidity	43
1.3.3 Wind	45
1.3.4 Rain	45
1.4 Sudden weather changes	46
1.4.1 Gusts	47
1.4.2 Squalls	50
1.4.3 Fronts	52
2 Staying Airborne	
2.1 Fall-out	57
2.2 Impaction	59
2.3 Landing by insects	61

2.4	Effects of rain.	63
2.5	Death in the air.	65
3 Downwind Drift		
3.1	Winds and trajectories	67
3.1.1	Windfield maps	68
3.1.2	Wind systems	72
3.1.3	Downwind trajectories	74
3.2	Examples of downwind drift	77
3.2.1	Spores.	77
3.2.2	Bacteria and viruses	85
3.2.3	Mites and scale insects	88
3.2.4	Caterpillars.	91
4 Insect Flight Within the Boundary Layer		
4.1	Persistent cross-country flight	95
4.2	Upwind flight	101
5 Insect Flight Above the Boundary Layer		
5.1	Marking and back-tracking	116
5.2	Marking but not back-tracking	119
5.3	Back-tracking, but not marking	124
5.4	Back-tracking from later developments	137
5.5	Arrivals with weather systems	140
5.6	Sightings far from sources	152
5.7	Seasonal redistribution	155
5.8	Individual flight in relation to the wind	160
5.9	Other evidence for long-distance flight.	166
5.10	Summary.	166
6 Swarms		
6.1	Swarms of locusts	169
6.2	Swarms of other insects	181
7 Dispersion and Concentration		
7.1	Cloud structure.	184
7.2	Clouds of pollen and bacteria.	186
7.3	Clouds of insects.	189
7.4	Concentration of windborne insects	193

Table of Contents

7

8 Forecasting	
8.1 Needs of forecasting services	203
8.2 Forecasting outbreaks of windborne insects	205
8.2.1 The desert locust	206
8.2.2 The African armyworm	206
8.2.3 Aphids	207
8.3 Forecasting outbreaks of windborne diseases	208
8.3.1 Foot-and-mouth virus	208
8.3.2 Hay fever	208
References	211
Index	241
