Contents

PART ONE AIR POLLUTANTS, THEIR SOURCES AND EFFECTS

1. AIR POLLUTANTS 3

1.1. Air Pollution System 3
1.2. Air Pollutants 5
1.2.1. Composition of "Clean" Tropospheric Air 7
1.2.2. Sulfur-Containing Compounds 9
1.2.3. Nitrogen-Containing Compounds 12
1.2.4. Carbon-Containing Compounds 16
1.2.5. Halogen Compounds 20
1.3. Atmospheric Particulate Matter 23
1.3.1. Sizes of Atmospheric Particles 23
1.3.2. Sources of Atmospheric Particulate Matter 26
1.3.3. Carbonaceous Particles in the Air 31
1.4. Atmospheric Pollutant Concentration Levels 36
1.4.1. Atmospheric Concentrations of Sulfur Compounds 36
1.4.2. Atmospheric Concentrations of Carbon Monoxide 39
1.4.3. Atmospheric Concentrations of Nitrogen Oxides 40
1.4.4. Atmospheric Concentrations of Hydrocarbons 41
1.4.5. Atmospheric Concentrations of Particulate Matter 41
1.4.6. Photochemical Smog and Ozone 42
1.A.1. Units 43
References 45
Problems 47

2. EFFECTS OF AIR POLLUTION 49

2.1. Effects of Air Pollution on Atmospheric Properties 49
2.2. Effects of Air Pollution on Materials 51
2.3. Effects of Air Pollution on Vegetation 51

2.4. Effects of Air Pollution on Human Health 51
2.4.1. Carbon Monoxide 54
2.4.2. Oxides of Sulfur 56
2.4.3. Oxides of Nitrogen 58
2.4.4. Photochemical Oxidants 58
2.4.5. Toxic Substances 59
2.5. Deposition of Aerosols in the Respiratory Tract 59
2.6. Air Quality Standards Versus Emissions Standards 68
References 71

3. SOURCES OF POLLUTANTS IN COMBUSTION PROCESSES 77

3.1. Pollutant Formation in Combustion 77
3.1.1. Burning of a Hydrocarbon Fuel 77
3.1.2. Mechanism of Nitrogen Oxides (NO_x) Formation 79
3.2. Thermal NO_x Formation 80
3.3. Fuel NO_x Formation 85
3.4. Coal Combustion 86
3.5. Control of NO_x in Stationary Combustion Sources 88
3.6. Internal Combustion Engine 90
3.6.1. Operation of the Internal Combustion Engine 90
3.6.2. Pollutant Emissions from the Internal Combustion Engine 92
3.6.3. Emission Control for the Internal Combustion Engine 99
3.7. Stationary Sources of Sulfur Oxides 104
References 104
Problems 105

PART TWO AIR POLLUTION CHEMISTRY

4. GAS-PHASE ATMOSPHERIC CHEMISTRY 111

4.1. Atmospheric Photochemical Reactions 112
4.2. Atmospheric Chemistry of the Oxides of Nitrogen 118
4.2.1. Basic Photochemical Cycle of NO_2, NO, and O_3 119
4.2.2. Atmospheric Chemistry of Carbon Monoxide and NO_x 123
4.2.3. Atmospheric Chemistry of Formaldehyde and NO_x 128
4.3. Chemistry of the Background Troposphere 134

4.4. Atmospheric Organic Chemistry 139
4.4.1. Carbonyl Chemistry 139
4.4.2. Alkane Chemistry 142
4.4.3. Alkene Chemistry 145
4.4.4. Aromatic Chemistry 150
4.5. Summary of Organic/NO_x Chemistry—The Chemistry of Photochemical Smog 154
4.5.1. Organic Reactivity 157
4.5.2. Analysis of a Generalized Reaction Mechanism for Photochemical Smog 158
4.5.3. The Ozone Isopleth Plot 161
4.5.4. Summary of Atmospheric NO_x Chemistry 163
4.6. Chemistry of Sulfur Dioxide 164
4.7. Stratospheric Chemistry 169
4.7.1. Stratospheric Ozone 169
4.7.2. Chlorofluorocarbons and Stratospheric Ozone 172
4.8. Summary of Rate Constants for Gas-Phase Atmospheric Reactions 174
4.A.1. Chemical Reaction Rate Constant Units 174
4.A.2. Kinetic Treatment of Combination and Dissociation Reactions 178
4.A.3. Calculation of Atmospheric Water Vapor Concentration 179
References 182
Problems 184

5. AQUEOUS-PHASE ATMOSPHERIC CHEMISTRY 195

5.1. Absorption Equilibria and Henry's Law 198
5.2. Aqueous-Phase Chemical Equilibria 200
5.2.1. Carbon Dioxide/Water Equilibrium 201
5.2.2. Sulfur Dioxide/Water Equilibrium 202
5.2.3. Ammonia/Water Equilibrium 206
5.2.4. Aqueous Equilibria of the Nitrogen Oxides 207
5.3. Liquid Water in the Atmosphere 213
5.4. Reaction Kinetics of Aqueous Sulfur Chemistry 218
5.4.1. Uncatalyzed Oxidation of S(IV) by Dissolved Oxygen 218
5.4.2. Oxidation of S(IV) by Dissolved Ozone 218
5.4.3. Oxidation of S(IV) by Dissolved Hydrogen Peroxide 219
5.4.4. Oxidation of S(IV) by Dissolved Oxygen Catalyzed by Iron 220

5.4.5. Oxidation of S(IV) by Dissolved Oxygen Catalyzed by Manganese 222
5.4.6. Oxidation of S(IV) by Dissolved Oxygen Catalyzed by Iron and Manganese 223
5.4.7. Oxidation of S(IV) by Dissolved HNO_2 223
5.4.8. Oxidation of S(IV) by Dissolved NO_2 223
5.4.9. Carbon-Catalyzed Oxidation of S(IV) 226
5.4.10. Comparison of Aqueous-Phase SO_2 Oxidation Paths 226
5.5. Reaction Kinetics of Aqueous Nitrogen Chemistry 229
5.6. Dynamic Behavior of Solutions with Aqueous-Phase Chemical Reactions 234
5.6.1. Closed System 235
5.6.2. Calculation of Concentration Changes in a Droplet with Aqueous-Phase Reactions 237
5.7. Nonideal Solution Thermodynamics 241
References 243
Problems 246

6. MASS TRANSFER ASPECTS OF ATMOSPHERIC CHEMISTRY 251

6.1. Characteristic Time of Gas-Phase Diffusion to a Droplet 252
6.2. Characteristic Time to Achieve Interfacial Phase Equilibrium 256
6.3. Characteristic Time of Aqueous Dissociation Reactions 259
6.4. Characteristic Time of Aqueous-Phase Diffusion in a Droplet 261
6.5. Characteristic Time for Aqueous-Phase Chemical Reaction 262
6.6. Comparison of Characteristic Times for Aqueous-Phase S(IV) Oxidation 263
6.7. Mass Transfer to Falling Drops 267
6.A.1. Solution of the Transient Gas-Phase Diffusion Problem Eqs. (6.1) to (6.4) 268
6.A.2. Solution of Eqs. (6.32) to (6.35) 270
References 270
Problems 271

PART THREE AEROSOLS

7. PROPERTIES OF AEROSOLS 275

7.1. The Size Distribution Function 275
7.1.1. Distributions Based on $\log D_p$ 277

7.1.2. Relating Size Distributions Based on Different Independent Variables 279
7.2. Properties of Size Distributions 279
7.3. The Log-Normal Distribution 281
7.3.1. Plotting the Log-Normal Distribution 284
7.3.2. Properties of the Log-Normal Distribution 285
7.4. Atmospheric Aerosols 286
7.5. Visibility Degradation 289
7.5.1. Components of the Extinction Coefficient 293
7.5.2. Light Extinction Due to Single-Component Spherical Aerosols 299
References 302
Problems 303

8. DYNAMICS OF SINGLE AEROSOL PARTICLES 307

8.1. The Knudsen Number 307
8.1.1. The Mean Free Path 307
8.1.2. Transport Properties of Gases as Mean Free Path Phenomena 311
8.2. The Drag on a Single Particle—Stokes Law 312
8.3. Non-Continuum Effects—Cunningham Correction Factor 317
8.4. Motion of an Aerosol Particle in an External Force Field 318
8.5. Brownian Motion of Aerosol Particles 320
8.5.1. Mobility and Drift Velocity 325
8.5.2. Mean Free Path of an Aerosol Particle 326
8.5.3. Phoretic Effects 327
8.6. Mass and Heat Transfer to Single Aerosol Particles 327
8.7. The Transition Regime 334
8.7.1. Fuchs Theory of the Transition Regime 336
8.7.2. Comparison of Transition Regime Formulas 337
8.7.3. The Accommodation Coefficient 337
References 339
Problems 339

9. THERMODYNAMICS OF AEROSOLS AND NUCLEATION THEORY 343

9.1. Equilibrium Vapor Pressure Over a Curved Surface—The Kelvin Effect 343
9.2. Equilibrium of an Aqueous Solution Droplet 348
9.3. Homogeneous Nucleation Theory 354
9.3.1. Equilibrium Cluster Distribution 355
9.3.2. Kinetics of Homogeneous Nucleation 358

9.3.3. Evaluation of the Homogeneous Nucleation Rate for Water 361
9.4. Homogeneous-Heteromolecular Nucleation 365
9.5. Binary Nucleation in the H_2O-H_2SO_4 System 368
9.5.1. Properties of Sulfuric Acid Solution Droplets 368
9.5.2. Nucleation of H_2O-H_2SO_4 Droplets 371
9.6. Nucleation from Chemical Reaction 373
9.7. Ammonia in the Atmosphere 377
9.7.1. Qualitative Observations on the Ammonium/Sulfate/Nitrate System 378
9.7.2. The Ammonium Nitrate System—Theoretical Predictions 378
References 382
Problems 384

10. DYNAMICS OF AEROSOL POPULATIONS 391

10.1. Rate of Coagulation of Two Particles by Brownian Motion 391
10.2. Coagulation in Laminar Shear Flow, Turbulence, and by Gravitational Settling 399
10.2.1. Coagulation in Laminar Shear Flow 399
10.2.2. Coagulation in Turbulent Flow 400
10.2.3. Coagulation Due to Gravitational Settling 400
10.3. Effect of Particle Force Fields on Brownian Coagulation 401
10.3.1. van der Waals Forces 402
10.3.2. Coulomb Forces 404
10.4. The Discrete General Dynamic Equation 406
10.5. The Continuous General Dynamic Equation 409
10.6. Solution of the Coagulation Equation 412
10.6.1. Discrete Coagulation Equation 412
10.6.2. Continuous Coagulation Equation 413
10.7. Solution of the Condensation Equation 416
10.8. Effect of the Mechanism of Gas-to-Particle Conversion on the Evolution of an Aerosol Size Distribution 422
10.8.1. Diffusion-Controlled Growth 424
10.8.2. Surface Reaction-Controlled Growth 425
10.8.3. Volume Reaction-Controlled Growth 426
10.8.4. Dimensionless Size Spectra Evolution 427
10.9. Kinetic Approach to Homogeneous Nucleation Theory 431
References 432
Problems 434

PART FOUR AIR POLLUTION METEOROLOGY

11. AIR POLLUTION METEOROLOGY 441

11.1. Atmospheric Energy Balance 443
11.1.1. Radiation 443
11.1.2. Energy Balance for Earth and Atmosphere 449
11.2. Temperature in the Lower Atmosphere 453
11.2.1. Pressure and Temperature Relationships in the Lower Atmosphere 454
11.2.2. Temperature Changes of a Rising (or Falling) Parcel of Air 457
11.2.3. Atmospheric Stability 459
11.3. Winds 463
References 471
Problems 472

12. MICROMETEOROLOGY 475

12.1. Basic Equations of Atmospheric Fluid Mechanics 475
12.2. Turbulence 482
12.3. Equations for the Mean Quantities 484
12.4. Mixing-Length Models for Turbulent Transport 487
12.5. Variation of Wind with Height in the Atmosphere 491
12.5.1. Mean Velocity in the Surface Layer in Adiabatic Conditions 492
12.5.2. Effects of Temperature on the Surface Layer 495
12.5.3. Wind Profiles in the Nonadiabatic Surface Layer 504
12.5.4. Determination of the Friction Velocity u_* 507
12.5.5. Empirical Formula for the Mean Wind Speed 508
12.6. The Pasquill Stability Classes 509
12.7. The Convective Boundary Layer 511
12.8. Meteorological Measurements Important in Air Pollution 512
References 514
Problems 515

PART FIVE ATMOSPHERIC DIFFUSION

13. ATMOSPHERIC DIFFUSION THEORIES 521

13.1. Eulerian Approach 521
13.2. Lagrangian Approach 525

13.3. Comparison of Eulerian and Lagrangian Approaches 526
13.4. Equations Governing the Mean Concentration of Species in Turbulence 527
13.4.1. Eulerian Approaches 527
13.4.2. Conditions for Validity of the Atmospheric Diffusion Equation 528
13.4.3. Lagrangian Approaches 532
13.5. Solution of the Atmospheric Diffusion Equation for an Instantaneous Source 535
13.6. Mean Concentration from Continuous Sources 536
13.6.1. Lagrangian Approach 536
13.6.2. Eulerian Approach 542
13.6.3. Summary of Continuous Point Source Solutions 543
13.7. Statistical Theory of Turbulent Diffusion 544
13.7.1. Qualitative Features of Atmospheric Diffusion 545
13.7.2. Motion of a Single Particle Relative to a Fixed Axis 547
13.8. Summary of Atmospheric Diffusion Theories 551
13.A.1. Solution of Eqs. (13.47) to (13.49) 553
13.A.2. Solution of Eqs. (13.68) to (13.69) 555
13.A.3. Solution of Eqs. (13.77) to (13.79) 556
References 557
Problems 557

14. THE GAUSSIAN PLUME EQUATION 561

14.1. Gaussian Concentration Distributions 561
14.2. Derivation of the Gaussian Plume Equation as a Solution of the Atmospheric Diffusion Equation 564
14.3. Summary of Gaussian Point Source Diffusion Formulas 569
14.4. Dispersion Parameters in Gaussian Models 572
14.4.1. Correlations for σ_y and σ_z Based on Similarity Theory 572
14.4.2. Correlations for σ_y and σ_z Based on Pasquill Stability Classes 574
14.5. Plume Rise 578
14.6. Analytical Properties of the Gaussian Plume Equation 580
References 584
Problems 586

15. THE ATMOSPHERIC DIFFUSION EQUATION AND AIR QUALITY MODELS 593

15.1. Mean Wind Speed 593
15.2. Vertical Eddy Diffusion Coefficient K_{zz} 594
15.2.1. Unstable Conditions 594
15.2.2. Neutral Conditions 595
15.2.3. Stable Conditions 597
15.3. Horizontal Eddy Diffusion Coefficients K_{xx} and K_{yy} 597
15.4. Solutions of the Steady-State Atmospheric Diffusion Equation 598
15.4.1. Diffusion from a Point Source 599
15.4.2. Diffusion from a Line Source 600
15.5. Air Quality Models 600
15.5.1. Types of Models 602
15.5.2. Temporal Resolution of Models 602
15.5.3. Spatial Resolution of Models 603
15.6. The General Structure of Multiple Source Plume Models 604
15.7. Numerical Solution of the Atmospheric Diffusion Equation 607
15.7.1. Finite Difference Methods 607
15.7.2. Finite Element Methods 608
15.7.3. Splitting Methods 609
15.7.4. Techniques for Specific Operators 609
15.7.5. Summary 610
References 611
Problems 612

16. ATMOSPHERIC REMOVAL PROCESSES AND RESIDENCE TIMES 617

16.1. General Representation of Atmospheric Removal Processes 617
16.2. Precipitation Scavenging of Particles 620
16.2.1. Collision Efficiency 621
16.2.2. Scavenging Rates 624
16.3. Precipitation Scavenging of Gases 628
16.3.1. Scavenging of an Irreversibly Soluble Gas 629
16.3.2. Scavenging of Reversibly Soluble Gases 634
16.4. Dry Deposition 639
16.4.1. Aerodynamic Resistance 641
16.4.2. Surface Layer Resistance 642

16.4.3. Transfer Resistance 643
16.4.4. Total Resistance 643
16.5. Experimental Observations of Dry Deposition 647
16.6. Air Trajectory Long-Range Transport Modeling 650
16.7. Atmospheric Residence Times and Global Budgets 651
16.7.1. General Definitions 651
16.7.2. Atmospheric Sulfur Residence Times 655
References 658
Problems 659

PART SIX SPECIAL TOPICS

17. AIR POLLUTION STATISTICS 669

17.1. Probability Distributions for Air Pollutant Concentrations 671
17.1.1. The Log-Normal Distribution 672
17.1.2. The Weibull Distribution 673
17.2. Estimation of Parameters in the Distributions 675
17.2.1. Method of Quantiles 675
17.2.2. Method of Moments 676
17.3. Order Statistics of Air Quality Data 679
17.3.1. Basic Notions and Terminology of Order Statistics 680
17.3.2. Extreme Values 680
17.4. Exceedances of Critical Levels 682
17.4.1. Distribution of Exceedances 682
17.4.2. Expected Return Period or Waiting Time 682
17.5. Alternative Forms of Air Quality Standards 684
17.5.1. Evaluation of Alternative Forms of the Ozone Air Quality Standard with 1971 Pasadena, California Data 687
17.5.2. Selection of the Averaging Time 688
17.6. Relating Current and Future Air Pollutant Statistical Distributions 689
References 691
Problems 692

18. ACID RAIN 695

18.1. Overview of Acid Precipitation 695
18.1.1. Historical Perspective 696
18.1.2. What is Acid Rain? 696
18.1.3. Current Data and Historical Trends 698

18.1.4. Effects of Acid Deposition 701
18.2. Key Questions in Acid Rain 703
18.2.1. Chemical and Physical Processes 704
18.2.2. Source-Receptor Relationships 707
18.2.3. Linearity 707
18.3. Chemistry of Acid Rain 708
18.4. Cloud Processes in Acid Rain 716
18.5. Source-Receptor Relationships 719
18.6. Acid Fog 720
References 720
Problems 723
