# STRATOSPHERIC AND MESOSPHERIC CIRCULATION

(Tsirkulyatsiya v stratosfere i mezofere)

Gidrometeorologicheskoe Izdatel'stvo  
Leningrad 1968

Translated from Russian

Israel Program for Scientific Translations  
Jerusalem 1970

## Table of Contents

INTRODUCTION.....	1
Chapter I. VERTICAL STRUCTURE OF AIR CURRENTS IN THE TROPICAL AND EQUATORIAL TROPOSPHERE AND LOWER STRATOSPHERE .....	4
Vertical structure of zonal currents .....	4
Vertical structure of meridional flow .....	19
Chapter II. PERIODIC VARIATIONS OF THE ZONAL WIND COMPONENT IN THE LOWER EQUATORIAL STRATOSPHERE .....	24
Quasi-biennial oscillation of the zonal wind components in the lower equatorial stratosphere .....	24
Nature and causes of the quasi-biennial oscillation of the zonal wind components in the lower equatorial stratosphere .....	30
Chapter III. SEASONAL FEATURES OF PERIODIC VARIATIONS IN THE LOWER STRATOSPHERE .....	36
Seasonal features of periodic variations in the lower equatorial and tropical stratosphere .....	36
Quasi-biennial oscillation and general circulation in the lower stratosphere.	47
Chapter IV. CIRCULATION IN THE UPPER TROPICAL AND EQUATORIAL STRATOSPHERE AND MESOSPHERE .....	72
Periodic and nonperiodic variations of the zonal wind in the tropical stratosphere and mesosphere .....	72
Some seasonal features of the circulation in the upper equatorial stratosphere .....	82
Semiannual periodicity of the zonal wind in the upper equatorial stratosphere and its relation to the quasi-biennial oscillation in the lower stratosphere .....	90
Chapter V. INTERACTION OF THE ATMOSPHERIC CIRCULATION IN THE EXTRATROPICAL AND TROPICAL STRATOSPHERE AND MESOSPHERE .....	103
Some climatic features of the extratropical stratosphere and mesosphere ..	105
Relation between the periodic variations of the circulation in the extra- tropical and tropical stratosphere and mesosphere .....	113
Nonperiodic variations in the winter stratosphere (winter warmings) and their relation to the general circulation .....	131
CONCLUSION .....	152
BIBLIOGRAPHY.....	155
