AN INTRODUCTION TO DYNAMIC METEOROLOGY

JAMES R. HOLTON
University of Washington

ACADEMIC PRESS New York and London

Contents

PREFACE	ix
ACKNOWLEDGMENTS	xi

Chapter 1 Introduction

1.1 Scale Analysis	1
1.2 The Fundamental Forces	3
1.3 Non-Newtonian Reference Frames and "Apparent" Forces	8
1.4 Total Differentiation	15
1.5 Atmospheric Thermodynamics	17
Problems	19
Suggested References	20

Chapter 2 The Momentum Equation

2.1 Total Differentiation of a Vector in a Rotating System	21
2.2 The Vectorial Form of the Momentum Equation in Rotating Coordinates	22
2.3 The Component Equations in Spherical Coordinates	24
2.4 Scale Analysis of the Equations of Motion	28
Problems	33
Suggested References	33

Chapter 3 Elementary Applications of the Horizontal Equations of Motion

3.1	The Geostrophic Wind	34
3.2	Balanced Curved Flow	38
3.3	Trajectories and Streamlines	45
3.4	Vertical Shear of the Geostrophic Wind: The Thermal Wind	48
	Problems	52
	Suggested Reference	53

Chapter 4 The Continuity Equation

4.1	Derivation in Cartesian Coordinates	54
4.2	Equation of Continuity in Isobaric Coordinates	56
4.3	Vertical Motion	57
4.4	The Relationship between ω and w	58
4.5	The Measurement of Horizontal Divergence	59
	Problems	60

Chapter 5 Circulation and Vorticity

5.1	The Circulation Theorem	61
5.2	Vorticity	65
5.3	Potential Vorticity	69
5.4	The Vorticity Equation	73
5.5	Scale Analysis of the Vorticity Equation	76
	Problems	79
	Suggested References	80

Chapter 6 The Planetary Boundary Layer

6.1	The Mixing Length Theory	82
6.2	The Ekman Layer Equations	84
6.3	Secondary Circulations and Spin-Down	88
	Problems	93
	Suggested References	93

Chapter 7 Diagnostic Analysis of Synoptic Scale Motions in Middle Latitudes

7.1	The Observed Structure of Midlatitude Synoptic Systems	96
7.2	The Basic Equations in Isobaric Coordinates	102
7.3	Diagnostic Equations	103
7.4	Idealized Model of a Developing Baroclinic System	115
	Problems	118
	Suggested References	119

Chapter 8 Numerical Prediction

8.1	Historical Background	120
8.2	Filtering of Sound and Gravity Waves	122
8.3	Filtered Forecast Equations	126
8.4	One-Parameter Models	129
8.5	A Two-Parameter Baroclinic Model	133
8.6	Numerical Solution of the Barotropic Vorticity Equation	140
8.7	Primitive Equation Models	149
	Problems	158
	Suggested References	160

Chapter 9 Atmospheric Oscillations: Linear Perturbation Theory

9.1	The Perturbation Method	162
9.2	Properties of Waves	162
9.3	Sound Waves	165
9.4	Gravity Waves: Vertical Stability	167
9.5	Rossby Waves	179
	Problems	181
	Suggested References	183

Chapter 10 The Origin and Motion of Midlatitude Synoptic Systems

10.1	Hydrodynamic Instability	184
10.2	Baroclinic Instability: Cyclogenesis	186
10.3	The Energetics of Baroclinic Waves	192
10.4	Fronts and Frontogenesis	202
	Problems	209
	Suggested References	210

Chapter 11 The General Circulation

11.1	The Nature of the Problem	212
11.2	The Energy Cycle: A Quasi-Geostrophic Model	213
11.3	The Momentum Budget	223
11.4	The Dynamics of Zonally Symmetric Circulations	228
11.5	Laboratory Simulation of the General Circulation	234
11.6	The Numerical Simulation	242
11.7	The General Circulation of the Stratosphere	254
	Problems	259
	Suggested References	260

Chapter 12 Tropical Motion Systems

12.1	Scale Analysis of Tropical Motions	262
12.2	Cumulus Convection	267
12.3	The Observed Structure of Large-Scale Motions in the Equatorial Zone	278
12.4	The Origin of Equatorial Disturbances	289
12.5	Tropical Cyclones	295
	Problems	299
	Suggested References	299
Appendix A	Useful Constants	301
Appendix B	List of Symbols	302
Appendix C	Decomposition of a Vector into the Sum of Irrotational and Nondivergent Parts	305
Appendix D	The Equivalent Potential Temperature	307
	Bibliography	309
	INDEX	312
