## *CONTENTS*

|                                              |                |
|----------------------------------------------|----------------|
| <i>Preface</i>                               | <i>page ix</i> |
| <b>1 Fundamental properties of vorticity</b> |                |
| 1.1 Relation between velocity and vorticity  | 1              |
| 1.2 Vorticity and rotation                   | 6              |
| 1.3 Circulation                              | 8              |
| 1.4 Vortex lines and tubes                   | 8              |
| 1.5 The laws of vortex motion                | 10             |
| 1.6 Kelvin's circulation theorem             | 14             |
| 1.7 Cauchy's equations                       | 16             |
| 1.8 Irrotational flow                        | 17             |
| 1.9 Bernoulli's equation                     | 18             |
| <b>2 Singular distributions of vorticity</b> |                |
| 2.1 Vortex jumps                             | 20             |
| 2.2 Vortex sheets                            | 25             |
| 2.3 Line vortices                            | 33             |
| 2.4 Image vorticity                          | 39             |
| <b>3 Vortex momentum</b>                     |                |
| 3.1 Vortex force and bound vorticity         | 46             |
| 3.2 Hydrodynamic impulse                     | 48             |
| 3.3 Impulsive generation from rest           | 51             |
| 3.4 Effect of compressibility                | 53             |
| 3.5 Angular impulse                          | 55             |
| 3.6 Effect of viscosity                      | 56             |
| 3.7 Impulse of isolated vortices             | 56             |
| 3.8 Impulse of a line vortex                 | 60             |
| 3.9 Vortex centroid                          | 61             |
| 3.10 Impulse in two dimensions               | 62             |

|          |                                                          |     |
|----------|----------------------------------------------------------|-----|
| 3.11     | Kinetic energy of vortices                               | 67  |
| 3.12     | Helicity                                                 | 69  |
| 3.13     | Axisymmetric motion with swirl                           | 71  |
| <b>4</b> | <b>Motion with surfaces</b>                              | 74  |
| 4.1      | Virtual momentum of a moving body                        | 74  |
| 4.2      | Virtual momentum and impulse                             | 76  |
| 4.3      | Virtual angular momentum                                 | 78  |
| 4.4      | Two-dimensional motion with circulation                  | 79  |
| <b>5</b> | <b>Some applications</b>                                 | 81  |
| 5.1      | Virtual mass                                             | 81  |
| 5.2      | Attraction of vortices or bodies to walls                | 84  |
| 5.3      | Force on a body in a non-uniform stream                  | 87  |
| 5.4      | Force on a body in an accelerated irrotational stream    | 89  |
| 5.5      | Rotating bodies                                          | 89  |
| 5.6      | Torque on a body in a non-uniform stream                 | 91  |
| 5.7      | Self-propulsion of a deformable body                     | 92  |
| 5.8      | Buoyant vortex rings                                     | 93  |
| <b>6</b> | <b>Creation of vorticity</b>                             | 95  |
| 6.1      | Formation of a vortex sheet                              | 95  |
| 6.2      | Leading edge suction on the sheet                        | 97  |
| 6.3      | Approximate development of the sheet into a vortex pair  | 99  |
| 6.4      | Formation of a vortex ring                               | 103 |
| 6.5      | Creation of circulation about a body                     | 105 |
| 6.6      | Generation of vorticity by flow separation               | 107 |
| 6.7      | Accelerated flow past a wing                             | 109 |
| <b>7</b> | <b>Dynamics of line vortices in two-dimensional flow</b> | 116 |
| 7.1      | Stability of a polygonal array                           | 116 |
| 7.2      | Vortices near walls                                      | 119 |
| 7.3      | Kirchhoff–Routh path function                            | 123 |
| 7.4      | Conformal mapping and the Kirchhoff–Routh path function  | 126 |
| 7.5      | Stability of infinite periodic arrays                    | 130 |
| 7.6      | The Karman vortex street                                 | 133 |
| 7.7      | Statistical mechanics of assemblies of line vortices     | 138 |
| <b>8</b> | <b>Vortex sheets in two dimensions</b>                   | 141 |
| 8.1      | The Birkhoff–Rott equation                               | 141 |
| 8.2      | Kelvin–Helmholtz instability                             | 142 |
| 8.3      | The ill-posedness of vortex sheets                       | 145 |

|           |                                                                |     |
|-----------|----------------------------------------------------------------|-----|
| 8.4       | Roll-up of a semi-infinite vortex sheet: The Kaden spiral      | 147 |
| 8.5       | General similarity solutions, single and multibranched spirals | 152 |
| <b>9</b>  | <b>Dynamics of two-dimensional vortex patches</b>              | 160 |
| 9.1       | Vortex sheets of finite thickness                              | 160 |
| 9.2       | Contour dynamics and Schwarz functions                         | 163 |
| 9.3       | The Kirchhoff vortex and elliptical patches in uniform strain  | 167 |
| 9.4       | Equilibrium configurations for single patches                  | 171 |
| 9.5       | Filamentation                                                  | 175 |
| 9.6       | Vortex pairs                                                   | 179 |
| 9.7       | Arrays of vortex patches                                       | 183 |
| <b>10</b> | <b>Axisymmetric vortex rings</b>                               | 192 |
| 10.1      | Formulation                                                    | 192 |
| 10.2      | Thin cored rings                                               | 195 |
| 10.3      | Lamb's transformation and general core structure               | 201 |
| 10.4      | Canonical co-ordinates for thin rings                          | 206 |
| <b>11</b> | <b>Dynamics of vortex filaments</b>                            | 209 |
| 11.1      | Local induction approximation                                  | 209 |
| 11.2      | The cut-off method                                             | 212 |
| 11.3      | Kelvin waves on a filament                                     | 215 |
| 11.4      | Justification of the cut-off and higher-order approximations   | 218 |
| <b>12</b> | <b>Three-dimensional vortex instability</b>                    | 230 |
| 12.1      | Oscillations of a vortex column                                | 230 |
| 12.2      | Long-wave co-operative instabilities                           | 235 |
| 12.3      | Short-wave co-operative instability                            | 241 |
| 12.4      | Ultra short-wave co-operative instability                      | 250 |
| <b>13</b> | <b>Effects of viscosity</b>                                    | 253 |
| 13.1      | Viscous cores                                                  | 253 |
| 13.2      | Decay of trailing vortices                                     | 257 |
| 13.3      | Burgers vortices                                               | 264 |
| <b>14</b> | <b>Miscellaneous topics</b>                                    | 271 |
| 14.1      | Minimum induced drag                                           | 271 |
| 14.2      | Kelvin's variational principle                                 | 273 |
| 14.3      | Hamiltonian dynamics of vortex patch moments                   | 278 |

|                       |     |
|-----------------------|-----|
