Preface

xiii

PART I

FUNDAMENTALS

I Introduction

I

- 1-1 Objective 1
- 1-2 Importance of Geophysical Fluid Dynamics 2
- 1-3 Distinguishing Attributes of Geophysical Fluid Dynamics 4
- 1-4 Scales of Motion 5

- 1-5 Importance of Rotation 8
- 1-6 Importance of Stratification 9
- 1-7 Important Distinctions between the Atmosphere
and Oceans 10
- 1-8 General Remarks on Data Acquisition 12
- Problems 13
- Suggested Laboratory Demonstration 14
- Historical Note: Walsh Cottage 15

2 The Coriolis Force

16

- 2-1 Motivation for the Choice of a Rotating Reference
Framework 16
- 2-2 Rotating Frame of Reference 17
- 2-3 Unimportance of the Centrifugal Force 19
- 2-4 Motion of a Free Particle on a Rotating Plane 21
- 2-5 Analogy with a Pendulum 23
- 2-6 Acceleration on a Three-Dimensional Rotating
Earth 27
- Problems 29
- Suggested Laboratory Demonstrations 31
- Biography: Gaspard Gustave de Coriolis 32

3 The Governing Equations

33

- 3-1 Momentum Equations 33
- 3-2 Other Governing Equations 34
- 3-3 The Boussinesq Approximation 37
- 3-4 Further Simplifications 40
- 3-5 Recapitulation of the Equations Governing Geophysical
Flows 43
- 3-6 The Rossby and Ekman Numbers 44
- Problems 45
- Biography: Carl-Gustaf Arvid Rossby 47

PART II

ROTATION EFFECTS

4	<i>Geostrophic Flows and Vorticity Dynamics</i>	49
4-1	Homogeneous Geostrophic Flows	49
4-2	Homogeneous Geostrophic Flows over an Irregular Bottom	52
4-3	Generalization to Nongeostrophic Flows	54
4-4	Vorticity Dynamics	56
	Problems	58
	Suggested Laboratory Demonstration	60
	Biography: Geoffrey Ingram Taylor	61
5	<i>The Ekman Layer</i>	62
5-1	On the Importance of Friction	62
5-2	The Bottom Ekman Layer	63
5-3	Generalization to Nonuniform Currents	66
5-4	The Surface Ekman Layer	68
5-5	The Ekman Layer over Uneven Terrain	70
5-6	The Ekman Layer in Real Geophysical Flows	72
	Problems	74
	Suggested Laboratory Demonstration	75
	Biography: Vagn Walfrid Ekman	76
6	<i>Linear Barotropic Waves</i>	77
6-1	Linear Wave Dynamics	77
6-2	The Kelvin Wave	79
6-3	Inertia-Gravity Waves (Poincaré Waves)	82
6-4	Planetary Waves (Rossby Waves)	83
6-5	Topographic Waves	87
6-6	Analogy between Planetary and Topographic Waves	91

- Problems 93
 Suggested Laboratory Demonstration 94
 Biography: William Thomson, Lord Kelvin 95

7 Barotropic Instability 96

- 7-1 Introduction 96
 7-2 Waves on a Shear Flow 97
 7-3 Bounds on Wave Speeds and Growth Rates 100
 7-4 A Simple Example 103
 Problems 106
 Biography: Louis Norberg Howard 108

8 Large-Scale Ocean Circulation 109

- 8-1 Some Remarks on the Ocean and Atmosphere 109
 8-2 A Simple Model of Midlatitude Circulation 111
 8-3 Sverdrup Transport 114
 8-4 Westward Intensification 115
 8-5 Discussion 118
 Problems 119
 Suggested Laboratory Demonstration 119
 Biography: Harald Ulrik Sverdrup 121
 Biography: Henry Melson Stommel 122

PART III

STRATIFICATION EFFECTS

9 Stratification 123

- 9-1 Introduction 123
 9-2 Static Stability 124
 9-3 A Note on Atmospheric Stratification 125
 9-4 The Importance of Stratification: The Froude Number 129

- 9-5 Combination of Rotation and Stratification 132
 Problems 134
 Suggested Laboratory Demonstration 134
 Biography: David Brunt 135

10 Internal Waves **136**

- 10-1 From Surface to Internal Waves 136
 10-2 Internal-Wave Theory 138
 10-3 Structure of an Internal Wave 140
 10-4 Lee Waves 143
 10-5 A Note on Nonlinear Effects 147
 10-6 A Note on Shear Effects 148
 Problems 148
 Suggested Laboratory Demonstration 149
 Biography: Walter Heinrich Munk 150

11 Turbulence in Stratified Fluids **151**

- 11-1 Mixing of Stratified Fluids 151
 11-2 Instability of a Stratified Shear Flow 154
 11-3 Turbulence in a Stratified Shear Flow 160
 11-4 Convection 162
 Problems 166
 Suggested Laboratory Demonstration 167
 Biography: Lewis Fry Richardson 168

PART IV

COMBINED ROTATION AND STRATIFICATION EFFECTS

12 Layered Models **169**

- 12-1 From Depth to Density 169

12-2	Potential Vorticity	172	
12-3	Layered Models	174	
	Problems	179	
	Biography: Raymond Brailsin Montgomery	180	
13	<i>Stratified Geostrophic Dynamics</i>		181
13-1	Thermal Wind	181	
13-2	Geostrophic Adjustment	183	
13-3	Energetics of Geostrophic Adjustment	187	
	Problems	189	
	Suggested Laboratory Demonstration	191	
	Biography: George Veronis	192	
14	<i>Upwelling</i>		193
14-1	The Upwelling Process	193	
14-2	A Simple Model of Coastal Upwelling	195	
14-3	Finite-Amplitude Upwelling	197	
14-4	Variability of the Upwelling Front	199	
	Problems	200	
	Biography: Kozo Yoshida	203	
15	<i>Quasi-Geostrophic Dynamics</i>		204
15-1	Simplifying Assumption	204	
15-2	Governing Equation	206	
15-3	Discussion	210	
15-4	Energetics	212	
15-5	Planetary Waves in a Stratified Fluid	214	
15-6	Some Nonlinear Effects	219	
	Problems	223	
	Biography: Jule Gregory Charney	224	

16 Barolinic Instability **225**

- 16-1 Cause for Instability 225
- 16-2 Linear Theory 229
- 16-3 Heat Transport 233
- 16-4 More-General Criteria 234
 - Problems 237
 - Suggested Laboratory Demonstration 237
 - Biography: Joseph Pedlosky 239

17 Fronts, Jets, and Vortices **240**

- 17-1 Fronts and Jets 240
- 17-2 Vortices 251
- 17-3 Geostrophic Turbulence 259
 - Problems 261
 - Suggested Laboratory Demonstrations 263
 - Biography: Melvin Ernest Stern 264
 - Biography: Allan Richard Robinson 265

PART V

SPECIAL TOPICS

18 Climate Dynamics **267**

- 18-1 Climate versus Weather 267
- 18-2 Global Heat Budget 268
- 18-3 General Atmospheric Circulation 271
- 18-4 The Ocean as a Regulator 277
- 18-5 Greenhouse Effect 278
 - Problems 281
 - Suggested Laboratory Demonstration 282
 - Biography: Syukuro Manabe 283

19	<i>Equatorial Dynamics</i>	284
19-1	Equatorial Beta Plane	284
19-2	Linear Wave Theory	285
19-3	El Niño	290
	Problems	292
	Biography: Adrian Edmund Gill	293
	<i>Appendix A: Wave Kinematics</i>	294
A-1	Wave Number and Wavelength	294
A-2	Frequency, Phase Speed, and Dispersion	296
A-3	Group Velocity and Energy Propagation	299
	Problems	301
	Suggested Computer Demonstration	302
	<i>References</i>	303
	<i>Index</i>	313
