AN INTRODUCTION TO DYNAMIC METEOROLOGY

Second Edition

JAMES R. HOLTON

Department of Atmospheric Sciences
University of Washington
Seattle, Washington

ACADEMIC PRESS New York San Francisco London
A Subsidiary of Harcourt Brace Jovanovich, Publishers

Contents

PREFACE	ix
PREFACE TO FIRST EDITION	xi

Chapter 1 Introduction

1.1 The Atmospheric Continuum	1
1.2 Physical Dimensions and Units	2
1.3 Scale Analysis	4
1.4 The Fundamental Forces	5
1.5 Noninertial Reference Frames and “Apparent” Forces	10
1.6 Structure of the Static Atmosphere	17
Problems	22
Suggested References	25

Chapter 2 The Basic Conservation Laws

2.1 Total Differentiation	27
2.2 The Vectorial Form of the Momentum Equation in Rotating Coordinates	29
2.3 The Component Equations in Spherical Coordinates	31
2.4 Scale Analysis of the Equations of Motion	35
2.5 The Continuity Equation	40
2.6 The Thermodynamic Energy Equation	44

2.7	Thermodynamics of the Dry Atmosphere	47
	Problems	52
	Suggested References	53
Chapter 3 Elementary Applications of the Basic Equations		
3.1	The Basic Equations in Isobaric Coordinates	54
3.2	Balanced Flow	56
3.3	Trajectories and Streamlines	64
3.4	Vertical Shear of the Geostrophic Wind: The Thermal Wind	68
3.5	Vertical Motion	71
	Problems	74
Chapter 4 Circulation and Vorticity		
4.1	The Circulation Theorem	78
4.2	Vorticity	83
4.3	Potential Vorticity	87
4.4	The Vorticity Equation	92
4.5	Scale Analysis of the Vorticity Equation	95
	Problems	98
	Suggested References	100
Chapter 5 The Planetary Boundary Layer		
5.1	The Mixing Length Theory	102
5.2	Planetary Boundary Layer Equations	105
5.3	Secondary Circulations and Spin-Down	112
	Problems	116
	Suggested References	118
Chapter 6 The Dynamics of Synoptic Scale Motions in Middle Latitudes		
6.1	The Observed Structure of Midlatitude Synoptic Systems	120
6.2	Development of the Quasi-Geostrophic System	126
6.3	Idealized Model of a Developing Baroclinic System	140
	Problems	144
	Suggested Reference	145
Chapter 7 Atmospheric Oscillations: Linear Perturbation Theory		
7.1	The Perturbation Method	147
7.2	Properties of Waves	147
7.3	Simple Wave Types	152
7.4	Internal Gravity (Buoyancy) Waves	159

7.5	Rossby Waves	165
	Problems	168
	Suggested References	172
Chapter 8 Numerical Prediction		
8.1	Historical Background	173
8.2	Filtering of Sound and Gravity Waves	175
8.3	Filtered Forecast Equations	178
8.4	One-Parameter Models	181
8.5	A Two-Parameter Model	183
8.6	Numerical Solution of the Barotropic Vorticity Equation	186
8.7	Primitive Equation Models	198
	Problems	211
	Suggested References	213
Chapter 9 The Development and Motion of Midlatitude Synoptic Systems		
9.1	Hydrodynamic Instability	214
9.2	Baroclinic Instability: Cyclogenesis	216
9.3	The Energetics of Baroclinic Waves	227
9.4	Fronts and Frontogenesis	236
	Problems	244
	Suggested References	246
Chapter 10 The General Circulation		
10.1	The Nature of the Problem	248
10.2	The Energy Cycle: A Quasi-Geostrophic Model	250
10.3	The Momentum Budget	260
10.4	The Dynamics of Zonally Symmetric Circulations	267
10.5	Laboratory Simulation of the General Circulation	274
10.6	Numerical Simulation of the General Circulation	281
10.7	Longitudinally Varying Features of the General Circulation	288
	Problems	293
	Suggested References	294
Chapter 11 Stratospheric Dynamics		
11.1	The Observed Mean Structure and Circulation of the Stratosphere	296
11.2	The Energetics of the Lower Stratosphere	298
11.3	Vertically Propagating Planetary Waves	300
11.4	Sudden Stratospheric Warmings	303
11.5	Waves in the Equatorial Stratosphere	307
11.6	The Quasi-Biennial Oscillation	313
11.7	The Ozone Layer	317
	Problems	321
	Suggested References	322

Chapter 12 Tropical Motion Systems

12.1	Scale Analysis of Tropical Motions	324
12.2	Cumulus Convection	330
12.3	The Observed Structure of Large-Scale Motions in the Equatorial Zone	343
12.4	The Origin of Equatorial Disturbances	351
12.5	Tropical Cyclones	357
	Problems	360
	Suggested References	361
 Appendix A Useful Constants and Parameters		 363
 Appendix B List of Symbols		 364
 Appendix C Vector Analysis		 368
 Appendix D The Equivalent Potential Temperature		 371
 Appendix E Standard Atmosphere Data		 373
 Answers to Selected Problems		 375
 Bibliography		 379
 INDEX		 383
