# Climate and Weather in the Tropics

**HERBERT RIEHL**

1979

ACADEMIC PRESS  
London New York San Francisco  
*A Subsidiary of Harcourt Brace Jovanovich, Publishers*

# Contents

<b>Preface</b> . . . . .	v
<b>Symbols</b> . . . . .	x
<b>Note on Experiments</b> . . . . .	xii
<b>1. Wind Systems of the Tropics</b>	1
The low-level general circulation. An overview . . . . .	2
Seasonal variations of the surface circulation . . . . .	8
World distribution of surface winds and pressures . . . . .	11
Surface parameters following the equatorial trough . . . . .	16
Mean winds of the troposphere . . . . .	21
Stratospheric circulation . . . . .	29
References . . . . .	36
<b>2. Radiation, Temperature and Humidity</b>	39
Radiation . . . . .	40
Surface climate . . . . .	48
Upper air climate . . . . .	60
References . . . . .	78
Appendix . . . . .	80
<b>3. Precipitation and Evaporation</b>	81
Annual rainfall in the tropics . . . . .	82
Annual precipitation and evaporation . . . . .	83
Seasonal march of rainfall . . . . .	89
References . . . . .	120
<b>4. Vertical Energy Transfer</b>	123
The subcloud layer . . . . .	125
The cloud layer . . . . .	144
Turbulent exchange in the cloud layer . . . . .	169
References . . . . .	198
<b>5. The Trade Wind Inversion</b>	202
Vertical structure . . . . .	205
Variations of trade wind inversion structure . . . . .	211

Dissolution of the trade wind inversion . . . . .	218
The northeast trade of the Pacific Ocean . . . . .	225
Trade wind energy budgets . . . . .	234
References . . . . .	248
<b>6. Diurnal and Local Controls</b>	<b>250</b>
Ground-air interaction through heating . . . . .	251
Diurnal wind variation . . . . .	263
Diurnal variation of rainfall . . . . .	271
The control of climate by orography . . . . .	276
Possible increases of precipitation through reservoir construction . . . . .	280
Air pollution . . . . .	284
Fog . . . . .	285
Semi-diurnal pressure variation at the surface . . . . .	286
References . . . . .	287
<b>7. Weather Observations and Analyses</b>	<b>289</b>
Observation . . . . .	289
Methods of analysis . . . . .	303
References . . . . .	313
<b>8. Synoptic Scale Weather Systems</b>	<b>315</b>
Introduction . . . . .	315
Scales of turbulence . . . . .	316
Uncoupling in the troposphere . . . . .	317
Influence of radiation . . . . .	319
The tropical rainstorm as a synoptic system . . . . .	321
Synoptic envelopes . . . . .	340
References . . . . .	389
<b>9. Tropical Cyclones—Structure and Mechanics</b>	<b>394</b>
Summary of life cycle . . . . .	396
Surface structure . . . . .	398
Upper air structure . . . . .	418
Budgets of momentum and energy . . . . .	440
References . . . . .	452
Appendix: discussion of local heat source . . . . .	455
<b>10. Tropical Cyclones—Formation and Movement</b>	<b>459</b>
Some observations during hurricane formation . . . . .	462
Variability of hurricane intensity . . . . .	463
Formation of hurricanes . . . . .	464
Late hurricane stages . . . . .	483
Motion of hurricanes . . . . .	486
References . . . . .	493

<b>11. Numerical Hurricane Prediction by Ferdinand Baer</b>	497
Introduction . . . . .	497
Dynamical method . . . . .	500
Internal stress . . . . .	505
Heating . . . . .	508
Boundary conditions . . . . .	511
Numerics . . . . .	514
Initial conditions . . . . .	520
Steady state models . . . . .	521
Statistical method . . . . .	532
Results and potential . . . . .	534
References . . . . .	542
<b>12. The General Circulation</b>	545
The classical model . . . . .	546
Critique of the classical model: radiation . . . . .	547
Critique of the classical model: motions . . . . .	549
Numerical modelling . . . . .	556
General circulation budgets . . . . .	557
Variations of the general circulation . . . . .	583
References . . . . .	596
<b>Appendix</b>	601
Text books, monographs and articles containing extensive data sources or comprehensive literature surveys.	
<b>Index</b>	603
