# Atmospheric Planetary Boundary Layer Physics

*Proceedings of the 4th Course of the International School of Atmospheric Physics,  
"Ettore Majorana" Centre for Scientific Culture, held in Erice (Italy),  
13-27 February 1978*

Edited by:

A. LONGHETTO

*Laboratorio di Cosmo-geofisica del CNR, Corso  
Fiume 4, Torino, Italy*

ELSEVIER SCIENTIFIC PUBLISHING COMPANY  
Amsterdam — Oxford — New York 1980

## CONTENTS

|   |     |    |
|---|-----|----|
| Foreword .....  | V   |    |
| List of Contributors .....  | IX  |    |
| PART I. THEORY AND MODELING OF THE PLANETARY BOUNDARY LAYER                                 |     |    |
| Chapter 1. Applied numerical modeling of the atmospheric<br>boundary layer - S. Bodin ..... |     | 1  |
| Turbulence closure problems .....   | 1   |    |
| Applied models of the planetary boundary layer.....   | 21  |    |
| Sea breeze models .....   | 49  |    |
| References .....  | 69  |    |
| Appendices .....  | 75  |    |
| Chapter 2. Gravity waves and the atmospheric boundary layer..                               |     | 77 |
| F. Einaudi  |     |    |
| Abstract .....  | 77  |    |
| Introduction .....  | 77  |    |
| The governing equations .....   | 78  |    |
| Generation of gravity waves by wind shear .....   | 83  |    |
| Effect of gravity waves on dynamical and diffusive processes..                              | 85  |    |
| Conclusions .....   | 90  |    |
| References .....  | 91  |    |
| Chapter 3. Local flows .....  |     | 95 |
| R.A. Pearson  |     |    |
| Scales of motion .....  | 95  |    |
| Forcing for local flows .....   | 97  |    |
| The equations of motion .....   | 103 |    |
| Heat flux models .....  | 106 |    |
| Numerical methods .....   | 112 |    |
| Lateral boundary conditions .....   | 123 |    |
| The sea breeze .....  | 124 |    |
| The land breeze .....   | 137 |    |
| Spatial variations in heat flux .....   | 144 |    |
| The sea breeze with mean flow .....   | 145 |    |

XII

Circular symmetry ..... 150  
Mountains ..... 155  
Summary ..... 155  
References ..... 156

Chapter 4. Fluid modeling techniques in air pollution  
          meteorology - L. Briatore ..... 159  
Introduction ..... 159  
Principles of the method ..... 160  
Advantages and versatility of physical modeling ..... 162  
References ..... 163

Chapter 5. Investigations on structure and dynamics of  
          severe storms - F. Prodi ..... 165  
Introduction ..... 165  
Structure and dynamics ..... 165  
Severe storms and mesoscale properties of air masses ..... 167  
Numerical models ..... 167  
Hailstone analysis ..... 168  
References ..... 171

PART II. TURBULENT DIFFUSION IN THE PLANETARY BOUNDARY LAYER

Chapter 6. Mathematical principles of turbulent diffusion  
          modeling - R.G. Lamb ..... 173  
Abstract ..... 173  
Introduction ..... 173  
Eulerian models of the transport, diffusion, and chemical  
          reaction of atmospheric contaminants ..... 173  
Lagrangian models of the transport, diffusion and chemical  
          reactions of atmospheric pollutants ..... 181  
References ..... 210

Chapter 7. Gaussian plume models ..... 211  
          D.M. Rote  
Lecture 1: Theoretical aspects ..... 211  
Lecture 2: Validation of models ..... 229  
Lecture 3: Sensitivity analysis ..... 240  
Lecture 4: Guidelines for model use ..... 256

|   |     |
|---|-----|
| Chapter 8. Determination of the dispersion coefficients from turbulence parameters - M. Benarie ..... | 261 |
| Chapter 9. Wet and dry removal aerosol particles from the planetary boundary layer - F. Prodi .....   | 267 |
| Introduction .....  | 267 |
| Dry deposition mechanisms .....   | 267 |
| Wet removal .....   | 269 |
| References .....  | 272 |
| Chapter 10. Removal and transformation processes for sulfur dioxide in the atmosphere .....           | 273 |
| D. Runca-Köberlich and H.W. Georgii   |     |
| Introduction .....  | 273 |
| Removal of sulfur dioxide .....   | 274 |
| Conclusions .....   | 285 |
| References .....  | 285 |
| PART III. STACK AND COOLING TOWER PLUME TRAJECTORIES  |     |
| Chapter 11. Meteorological effects of evaporative cooling systems - J.E. Carson .....                 | 287 |
| Lecture 1: Cooling systems for power plants .....   | 287 |
| Lecture 2: Atmospheric effects of natural-draft cooling towers .....                                  | 297 |
| Lecture 3: Atmospheric effects of mechanical-draft cooling towers .....                               | 300 |
| Lecture 4: Atmospheric effects of cooling ponds and spray canals .....                                | 305 |
| Lecture 5: Mathematical and physical models of cooling tower discharges .....                         | 309 |
| Summary, Lectures 1 through 5 .....   | 324 |
| References .....  | 326 |
| Bibliography .....  | 326 |
| Chapter 12. Lectures on plume rise .....  | 327 |
| D.J. Moore  |     |
| Introduction .....  | 327 |
| Qualitative descriptions of plumes .....  | 329 |

XIV

Equations determining plume growth and trajectory ..... 331  
Practical solutions ..... 335  
Comparison of plume rise measurements with calculation ..... 348  
Some additional problems ..... 350  
References ..... 354

Chapter 13. Plume rise observations in the planetary boundary  
layer - P. Bacci and A. Longhetto ..... 355  
Introduction ..... 355  
Plume rise formulas ..... 355  
Final rise ..... 356  
Brief comments on the above mentioned formulas ..... 358  
Discussion of the experimental results ..... 360  
Conclusions ..... 364  
References ..... 366

PART IV. EXPERIMENTS AND OBSERVATION IN THE PLANETARY BOUNDARY  
LAYER

Chapter 14. The airborne infrared radiometry in the studies  
of the planetary boundary layer ..... 367  
M. Colacino  
Abstract ..... 367  
Introduction ..... 367  
Description of the equipment and measurement methodology ... 367  
Some applications ..... 370  
References ..... 373

Chapter 15. The local atmospheric circulation in the Rome  
area ..... 375  
M. Colacino and L. Dell'Osso  
Abstract ..... 375  
Introduction ..... 375  
Data collection ..... 375  
Data analysis ..... 377  
References ..... 381

|  |     |
|--|-----|
| Chapter 16. Atmospheric circulation and air stability conditions at local scale in a complex terrain configuration ..... | 383 |
| D. Anfossi and A. Longhetto  |     |
| Introduction .....   | 383 |
| General remarks about the site and the campaigns .....   | 385 |
| Air circulation and broad characteristics of sea and land breezes .....  | 386 |
| Stability and instability of local flows at La Spezia .....  | 390 |
| References .....   | 398 |
| <br>Chapter 17. Applications of mask correlation spectrometry to remote sensing of air pollutants .....                  | 401 |
| S. Sandroni  |     |
| Introduction .....   | 401 |
| Active mode - long-path measurements .....   | 402 |
| Passive mode - plume geometry .....  | 407 |
| Pollutant mass flow and mapping .....  | 409 |
| References .....   | 410 |
| <br>Chapter 18. Mask correlation spectrometry as remote sensing technique - G. Giovanelli .....                          | 411 |
| Abstract .....   | 411 |
| The mask correlation spectrometry .....  | 411 |
| Disturbances in atmospheric measurements .....   | 414 |
| Conclusions .....  | 416 |
| References .....   | 416 |
| <br>Chapter 19. Detailed analysis of meteorological fields in the planetary boundary layer .....                         | 417 |
| M. Fea and S. Palmieri   |     |
| <br>Subject Index .....  | 421 |
