

Ellis Horwood Series in Environmental Science

# ATMOSPHERIC DIFFUSION

**third edition**

study of the dispersion of windborne material  
from industrial and other sources

F. PASQUILL and F. B. SMITH

# ATMOSPHERIC DIFFUSION

Third Edition

F. PASQUILL, D.Sc., F.R.S.

and

F. B. SMITH, Ph.D.

Senior Principal Scientific Officer  
Meteorological Office, Bracknell, Berkshire

ELLIS HORWOOD LIMITED  
Publishers • Chichester

Halsted Press: a division of  
JOHN WILEY & SONS  
New York • Chichester • Brisbane • Ontario

# Table of Contents

---

<b>Preface</b> .....	7
<b>Notation and Symbols</b> .....	9
<b>1 Introduction and Brief Outline</b> .....	13
<b>2 Turbulence in the Atmospheric Boundary Layer</b> .....	20
2.1 Essentials in the statistical description of turbulent flow .....	20
2.2 The mean-flow properties of the boundary layer .....	35
2.3 Thermal stratification and the maintenance of turbulent kinetic energy .....	49
2.4 Spectral representation — its significance and limitations .....	54
2.5 The small-scale structure of atmospheric turbulence .....	59
2.6 The statistics of boundary layer turbulence .....	67
2.7 Lagrangian properties .....	80
<b>3 Theoretical Treatments of the Diffusion of Material</b> .....	88
3.1 Eddy diffusivity and the gradient transfer approach .....	88
3.2 Solutions of the equations of diffusion .....	94
3.3 Similarity theory applied to diffusion .....	105
3.4 Statistical theory of dispersion from a continuous source .....	115
3.5 Applications and extensions of Taylor's theory .....	123
3.6 Stochastic modelling of diffusion .....	133
3.7 The expanding cluster .....	149
3.8 Diffusion of falling particles .....	158
3.9 The fluctuation of concentration .....	165
3.10 The effect of wind shear on horizontal spread .....	169
<b>4 Experimental Studies of the Basic Features of Atmospheric Diffusion</b> . . .	179
4.1 Principles of technique and analysis .....	179
4.2 The form of the cross-wind distribution at short range from a maintained point source .....	186

4.3	The magnitude of the cross-wind spread from a maintained point source . . . . .	189
4.4	The explicit relation between cross-wind spread and the statistics of the wind fluctuations . . . . .	198
4.5	Vertical diffusion from a near-surface release of passive particles. . . . .	204
4.6	Generalizations in terms of theories of vertical diffusion . . . . .	208
4.7	Dispersion from an elevated source . . . . .	215
4.8	The growth of clusters of particles . . . . .	220
<b>5</b>	<b>The Distribution of Windborne Material from Real Sources . . . . .</b>	<b>233</b>
5.1	The rise of hot effluent. . . . .	233
5.2	Deposition of airborne material . . . . .	246
5.3	The distribution of gaseous effluent from industrial stacks . . . . .	264
5.4	The effects of surface features . . . . .	283
5.5	Pollution in urban areas . . . . .	298
<b>6</b>	<b>The Estimation of Local Diffusion and Air Pollution from Meteorological Data. . . . .</b>	<b>309</b>
6.1	Qualitative features of diffusion and their variation with weather conditions . . . . .	310
6.2	The special meteorological factors in diffusion calculations . . . . .	313
6.3	Dispersion formulae for the local distribution of concentration from surface releases . . . . .	319
6.4	Estimation of vertical diffusion, from a surface release, through the depth of the boundary layer. . . . .	326
6.5	Allowance for elevation of source and for plume rise . . . . .	333
6.6	Presentation of dispersion estimates in terms of routine meteorological data . . . . .	335
6.7	Mathematical modelling for multiple sources . . . . .	341
6.8	Estimates using routine meteorological data and historical data on pollution . . . . .	351
6.9	Limitations and uncertainties in meteorological estimates of pollution . . . . .	357
<b>7</b>	<b>Dispersion over distances dominated by Mesoscale and Synoptic Scale Motions . . . . .</b>	<b>359</b>
7.1	The atmosphere on a large scale . . . . .	359
7.2	Dispersion into the whole atmosphere . . . . .	362
7.3	Mesoscale dispersion . . . . .	366
7.4	Long-range transport and the acid rain problem. . . . .	378
7.5	Long-range transport models . . . . .	380
	<b>References . . . . .</b>	<b>400</b>
	<b>Index . . . . .</b>	<b>431</b>
