Contents

Preface	page v
1. Introduction with historical notes	1
2. Characteristic scales and nondimensional parameters	6
3. Basic equations	13
<i>Equations of motion</i>	13
<i>Averaged equations</i>	17
<i>Stability and turbulent energy</i>	19
4. Statistical tools for description of turbulence	22
<i>Ensemble averages</i>	22
<i>Joint moment, covariance</i>	24
<i>Stationary random functions</i>	24
<i>Properties of the time autocovariances</i>	25
<i>Joint covariance</i>	25
<i>Spectra and cross spectra</i>	26
<i>Space-time covariances</i>	27
<i>Response of linear systems to random excitation</i>	29
<i>Impulse response and superposition</i>	30
<i>Response to a random input</i>	31
<i>Examples of response calculations</i>	33
<i>Distribution function and probability density</i>	34
<i>Characteristic function</i>	35
<i>Joint distributions, conditional probability</i>	36
<i>Central limit theorem</i>	37
<i>The lognormal distribution</i>	40
5. Examples of homogeneous turbulent flows	42
<i>Some spatially homogeneous fields</i>	42
<i>Isotropic turbulence</i>	53
6. Waves	67
<i>Kinematic wave theory</i>	67
<i>Effects of weak nonlinearity</i>	72
<i>Modulational instability</i>	74
<i>Soliton behavior</i>	76
<i>Surface gravity waves</i>	77
<i>Discussion</i>	81

7. Instability and transition to turbulence	84
<i>Instability to small disturbances</i>	85
<i>Universality in transition to chaos</i>	97
8. Shear flow turbulence structure	111
<i>Boundary layer turbulence structure</i>	111
<i>Structure of free-shear layers</i>	120
9. Turbulence modeling and closure schemes	123
<i>Some turbulence models</i>	123
<i>Closure schemes for spectral theories</i>	126
10. Aerodynamic noise	130
<i>A linear acoustic field excited by turbulent fluctuations</i>	130
<i>The far-field sound</i>	132
<i>Similarity analysis for the emitted sound</i>	133
<i>Effects of source motion and sound advection</i>	134
<i>Effects of a nonuniform flow</i>	135
11. Convective transport	137
<i>Nondimensional parameters characterizing convective transport</i>	137
<i>Thermal convection without mean shear</i>	140
	145
<i>References</i>	
<i>Index</i>	153
