# Contents

<b>1</b>	<b>Continuum Mechanics</b>	<b>1</b>
1.1	The Continuum Assumption	3
1.2	Fundamental Concepts, Definitions, and Laws	4
1.3	Space and Time	5
1.4	Density, Velocity, and Internal Energy	7
1.5	The Interface Between Phases	11
1.6	Conclusion	14
	Problems	15
<b>2</b>	<b>Thermodynamics</b>	<b>17</b>
2.1	Systems, Properties, and Processes	18
2.2	The Independent Variables	20
2.3	Temperature and Entropy	21
2.4	Fundamental Equation of a Substance	23
2.5	Definition of Temperature, Pressure, and Chemical Potential	24
2.6	Composite Systems and Internal Constraints	25
2.7	The Basic Postulate of Thermodynamics	27
2.8	Characteristics of the Temperature	30
2.9	Characteristics of the Pressure	31
2.10	Euler's Equation for Homogeneous Functions	33
2.11	The Gibbs–Duhem Equation	34
2.12	Alternate Forms of the Fundamental Equation	35
2.13	Intensive Forms	35
2.14	The Perfect Gas	37
2.15	Maxwell Relations	40
2.16	Working Equations	41
2.17	The Speed of Sound	43
2.18	Incompressible Substance	45
2.19	Conclusion	46
	Problems	47

<b>3</b>	<b>Vector Calculus and Index Notation</b>	<b>50</b>
3.1	Rotation of Axes	51
3.2	Definition of Vectors	56
3.3	Algebra with Vectors	57
3.4	Definition of Tensors	59
3.5	Symmetric and Antisymmetric Tensors	62
3.6	Algebra with Tensors	64
3.7	Vector Cross Product	66
3.8	Derivative Operations	67
3.9	Integral Formulas of Gauss and Stokes	71
3.10	Leibnitz's Theorem	73
3.11	Conclusion	75
	Problems	76
<b>4</b>	<b>Kinematics of Local Fluid Motion</b>	<b>78</b>
4.1	Lagrangian Viewpoint	78
4.2	Eulerian Viewpoint	82
4.3	Substantial Derivative	84
4.4	Decomposition of Motion	86
4.5	Elementary Motions in a Linear Shear Flow	90
*4.6	Proof of Vorticity Characteristics	92
*4.7	Rate-of-Strain Characteristics	94
4.8	Rate of Expansion	96
*4.9	Streamline Coordinates	97
4.10	Conclusion	99
	Problems	99
<b>5</b>	<b>Basic Laws</b>	<b>102</b>
5.1	Continuity Equation	102
5.2	Momentum Equation	106
5.3	Surface Forces	107
*5.4	Stress-Tensor Derivation	108
5.5	Interpretation of the Stress-Tensor Components	110
5.6	Pressure and Viscous Stress Tensor	112
5.7	Differential Momentum Equation	114
*5.8	Angular-Momentum Equation and Symmetry of $T_{ij}$	119
5.9	Energy Equation	121
5.10	Mechanical- and Thermal-Energy Equations	124
5.11	Energy Equation with Temperature as Dependent Variable	126
*5.12	Second Law of Thermodynamics	126
5.13	Integral Form of the Continuity Equation	127

- 5.14 Integral Form of the Momentum Equation 129
- \*5.15 Momentum Equation for a Deformable Particle of Variable Mass 130
- \*5.16 Other Physical Laws in Integral Form 134
- 5.17 Conclusion 135
- Problems 136

## **6 Newtonian Fluids and the Navier–Stokes Equations 139**

- 6.1 Newton's Viscosity Law 139
- 6.2 Molecular Model of Viscous Effects 142
- 6.3 Non-Newtonian Liquids 146
- \*6.4 The No-Slip Condition 149
- 6.5 Fourier's Heat-Conduction Law 152
- 6.6 Navier–Stokes Equations 154
- 6.7 Conclusion 155
- Problems 155

## **7 Some Incompressible Flow Patterns 157**

- 7.1 Pressure-Driven Flow in a Slot 157
- 7.2 Plane Couette Flow 167
- 7.3 Pressure-Driven Flow in a Slot with a Moving Wall 168
- 7.4 Double Falling Film on a Wall 170
- 7.5 The Rayleigh Problem 173
- 7.6 Conclusion 179
- Problems 179

## **8 Dimensional Analysis 181**

- 8.1 Measurement and Dimensions 182
- 8.2 Variables and Functions 185
- 8.3 The Pi Theorem 188
- 8.4 Pump or Blower Analysis 192
- 8.5 Number of Primary Dimensions 196
- \*8.6 Proof of Bridgman's Equation 201
- \*8.7 Proof of the Pi Theorem 203
- \*8.8 Vector Length Scales (Distinguished Directions) 207
- \*8.9 Generalized Millikan Argument 209
- 8.10 Dynamic Similarity 215
- 8.11 Nondimensional Formulation of Physical Problems 220
- 8.12 Conclusion 226
- Problems 227

<b>9</b>	<b>Compressible Couette Flow</b>	<b>229</b>
9.1	Compressible Couette Flow; Adiabatic Wall	229
9.2	Flow with Power-Law Transport Properties	233
9.3	Nonuniqueness of Navier–Stokes Solutions	234
9.4	Conclusion	236
	Problems	236
<b>10</b>	<b>Incompressible Flow</b>	<b>237</b>
10.1	Characterization	237
10.2	Incompressible Flow as a Low-Mach-Number Flow with Adiabatic Walls	238
10.3	Nondimensional Problem Statement	240
10.4	Characteristics of Incompressible Flow	244
10.5	Splitting the Pressure into Hydrodynamic and Hydrostatic Parts	247
*10.6	Mathematical Aspects of the Limit Process $M^2 \rightarrow 0$	250
*10.7	Invariance of Incompressible-Flow Equations under Unsteady Motion	252
*10.8	Low-Mach-Number Flows with Constant-Temperature Walls	254
*10.9	The Energy-Equation Paradox	258
10.10	Conclusion	260
	Problems	261
<b>11</b>	<b>Flows that are Exact Solutions of the Navier–Stokes Equations</b>	<b>262</b>
11.1	Pressure-Driven Flow in Tubes of Various Cross Sections; An Elliptical Tube	263
11.2	Stokes Oscillating Plate	266
*11.3	Transient for Stokes Oscillating Plate	272
*11.4	Starting Transient for Plane Couette Flow	275
11.5	Flow in a Slot with an Oscillating Pressure Gradient	279
11.6	Decay of an Ideal Line Vortex (Oseen Vortex)	283
11.7	Stagnation-Point Flow (Hiemenz Flow)	288
11.8	von Kármán’s Viscous “Pump”	296
11.9	Conclusion	300
	Problems	301
<b>12</b>	<b>Stream Functions and the Velocity Potential</b>	<b>303</b>
12.1	Stream Function for Plane Flows	303
*12.2	Streamlines and Streamsurfaces for a Three-Dimensional Flow	308

- 12.3 Velocity Potential and Unsteady Bernoulli Equation 315
- 12.4 Growth of a Gas Bubble in a Liquid 316
- 12.5 Flow in an Ideal Vortex—Circulation 318
- 12.6 Conclusion 320
- Problems 321

**13 Vorticity Dynamics**

**322**

- 13.1 Vorticity 322
- 13.2 Kinematic Results Concerning Vorticity 323
- 13.3 The Vorticity Equation 327
- 13.4 Vorticity Diffusion 328
- 13.5 Vorticity Intensification by Straining Vortex Lines 330
- 13.6 Hill's Spherical Vortex 332
- 13.7 Wall Production of Vorticity 334
- 13.8 How Vorticity Distributions are Established 337
- 13.9 Inviscid Motion of Line Vortices 342
- 13.10 Kelvin's Theorem and Helmholtz's Theorem 343
- \*13.11 Integral Vorticity Equations 346
- 13.12 Conclusion 347
- Problems 348

**14 Kinematic Decomposition of Flow Fields**

**349**

- \*14.1 General Approach 349
- \*14.2 Helmholtz's Decomposition 350
- \*14.3 Line Vortex and Vortex Sheet 352
- \*14.4 Complex-Lamellar Decomposition 354
- \*14.5 Conclusion 357
- Problems 358

**15 Flows at Moderate Reynolds Numbers**

**359**

- 15.1 Some Unusual Flow Patterns 360
- 15.2 Entrance Flows 365
- 15.3 Entrance Flow into a Cascade of Plates: Computer Solution by the Stream-Function-Vorticity Method 366
- 15.4 Entrance Flow into a Cascade of Plates: Pressure Solution 377
- 15.5 Entrance Flow into a Cascade of Plates: Results 378
- 15.6 Flow around a Circular Cylinder 384
- 15.7 Conclusion 401
- Problems 401

<b>16</b>	<b>Asymptotic Analysis Methods</b>	<b>403</b>
16.1	Oscillation of a Gas Bubble in a Liquid	403
16.2	Order Symbols, Gauge Functions, and Asymptotic Expansions	406
16.3	Inviscid Flow over a Wavy Wall	410
*16.4	Nonuniform Expansions	414
*16.5	Matched Asymptotic Expansions: Friedrich's Problem	417
*16.6	The Matching Process	420
*16.7	Composite Expansions; Accuracy	425
16.8	Conclusion	427
	Problems	427
<b>17</b>	<b>Characteristics of High-Reynolds-Number Flow</b>	<b>429</b>
17.1	Physical Motivation	429
17.2	Inviscid Main Flows	431
17.3	Pressure Changes in Flows	435
17.4	Boundary Layers	439
17.5	Conclusion	449
	Problems	450
<b>18</b>	<b>Ideal Flows in a Plane</b>	<b>451</b>
18.1	Problem Formulation for Plane Ideal Flows	452
18.2	Simple Plane Flows	456
18.3	Line Source and Line Vortex	460
18.4	Flow over a Nose or a Cliff	462
18.5	Doublets	468
18.6	Cylinder in a Stream	471
18.7	Cylinder with Circulation in a Uniform Stream	473
18.8	Lift and Drag on Two-Dimensional Shapes	476
18.9	Magnus Effect	479
18.10	Conformal Transformations	481
18.11	Joukowski Transformation; Airfoil Geometry	486
18.12	Kutta Condition	493
18.13	Flow Over a Joukowski Airfoil	495
18.14	Airfoil Lift	502
*18.15	Schwarz-Christoffel Transformation	508
*18.16	Flow around a Square Body or Over a Step	510
*18.17	Diffuser or Contraction Flow	515
*18.18	Gravity Waves in Liquids	520
18.19	Conclusion	526
	Problems	526

**19 Axisymmetric and Three-Dimensional Ideal Flows****529**

- 19.1 General Equations and Characteristics of Three-Dimensional Ideal Flows 529
- 19.2 Swirling Flow Turned into an Annulus 531
- 19.3 Flow over a Weir 533
- 19.4 Point Source 535
- 19.5 Rankine Nose Shape 536
- 19.6 Experiments on the Drag of Slender Shapes 539
- 19.7 Flow from a Doublet 542
- 19.8 Flow over a Sphere 544
- 19.9 D'Alembert's Paradox 546
- 19.10 Induced Drag 548
- 19.11 Lifting-Line Theory 553
- 19.12 Added Mass 554
- 19.13 Conclusion 559
- Problems 560

**20 Boundary Layers****561**

- 20.1 Blasius Flow over a Flat Plate 561
- 20.2 Displacement Thickness 567
- 20.3 Kármán Momentum Integral 569
- 20.4 Kármán-Pohlhausen Approximate Method 570
- 20.5 Falkner-Skan Similarity Solutions 572
- 20.6 Arbitrary Two-Dimensional Layers: Crank-Nicolson Difference Method 577
- \*20.7 Vertical Velocity 587
- 20.8 Joukowski-Airfoil Boundary Layer 590
- 20.9 Boundary Layer on a Bridge Piling 594
- 20.10 Boundary-Layer Separation 596
- 20.11 Axisymmetric Boundary Layers 599
- 20.12 Jets 602
- 20.13 Far Wake of Nonlifting Bodies 605
- 20.14 Shear Layers 608
- \*20.15 Asymptotic Theory and Matching 610
- \*20.16 Entrance Flow into a Cascade 615
- \*20.17 Three-Dimensional Boundary Layers 618
- \*20.18 Boundary Layer with a Constant Transverse Pressure Gradient 622
- \*20.19 Howarth's Stagnation Point 627
- \*20.20 Separation 630
- 20.21 Conclusion 635
- Problems 636

<b>21</b>	<b>Low-Reynolds-Number Flows</b>	<b>638</b>
21.1	General Relations for $Re \rightarrow 0$ ; Stokes Equations	638
21.2	Global Equations for Stokes Flow	642
21.3	Stokes Flow over a Sphere	644
*21.4	Nonuniformity of Stokes Flows on Infinite Domains	647
*21.5	Stokes Flow over Fluid Spheres	649
*21.6	Stokes Flow over Particles of Arbitrary Shape	652
*21.7	Interference Effects	655
21.8	Flow in Tubes and Channels with Varying Cross Sections	657
21.9	Reynolds Equations for Lubrication Theory	659
21.10	Slipper-Pad Bearing	662
*21.11	Squeeze Film Lubrication; Viscous Adhesion	664
*21.12	Local Flow Solutions	665
*21.13	Stokes Flow near a Circular Cylinder	668
*21.14	Oseen's Equations	669
21.15	Conclusion	671
	Problems	671
<b>22</b>	<b>Introduction to Stability</b>	<b>673</b>
22.1	Normal Modes as Perturbations	674
22.2	Kelvin-Helmholtz Inviscid Shear-Layer Instability	675
22.3	Stability Problem for Nearly Parallel Viscous Flows	679
22.4	Orr-Sommerfeld Equation	682
22.5	Inviscid Stability of Nearly Parallel Flows	684
22.6	Viscous Stability of Nearly Parallel Flows	685
22.7	Experimental Verification of Stability Theory	688
22.8	Inviscid Instability of Flows with Curved Streamlines	692
22.9	Taylor Instability of Couette Flow	694
22.10	Stability of Regions of Concentrated Vorticity	699
22.11	Some Other Instabilities	701
22.12	Conclusion	703
<b>23</b>	<b>Introduction to Turbulent Flows</b>	<b>704</b>
23.1	Types of Turbulent Flows	704
23.2	Characteristics of Turbulent Flows	705
23.3	Transition	709
23.4	Reynolds Decomposition	711
*23.5	Correlations of Fluctuations	713
23.6	Distinctive Regions of a Wall Layer	715
23.7	Reynolds Stress	722
*23.8	Kinetic Energy	724
