## CONTENTS

PREFACE	xi
<b>BUILDING, TESTING AND USING A GENERAL CIRCULATION MODEL</b> by M.L. Blackmon	1
Introduction	1
1. Building a General Circulation Model	2
2. Testing a GCM	20
3. Blocking in a GCM	39
4. Modeling the southern oscillation	56
References	67
<b>SOME TOPICS IN THE GENERAL CIRCULATION OF THE ATMOSPHERE</b> by B.J. Hoskins	71
Abstract	71
1. The observed seasonal mean atmospheric flow	71
2. Orographic and thermal forcing	80
3. Transients and the seasonal mean flow	88
4. Isentropic potential vorticity in the atmosphere	95
Acknowledgement	102
References	103
<b>LECTURES ON OCEAN CIRCULATION DYNAMICS</b> by P.B. Rhines	105
Introduction	105
1. Vortex stretching and potential vorticity	107
2. Significance of the transport of potential vorticity by eddies	113
3. Relation with the dispersal and orbital motion of fluid particles	117
4. Wind-driven gyres	125
Appendix: Scale analysis of the circulation integral	152
References	156

INDEX

<b>THERMOHALINE EFFECTS IN THE OCEAN CIRCULATION AND RELATED SIMPLE MODELS</b>	
by P. Welander	163
1. Historic background	163
2. The boussinesq approximation, and the density form models	167
3. Main thermocline regimes, and the role of vertical diffusion	172
4. Phenomena related to mixed boundary conditions	177
5. Thermal and thermohaline oscillators	191
References	198
<b>DIAGNOSTIC MODELS OF OCEAN CIRCULATION</b>	
by D.J. Olbers	201
1. Introduction	201
2. Water mass and isopycnal analysis	202
3. The dynamic method	205
4. The inverse method	209
5. The $\beta$ -spiral method	210
6. Summary and Outlook	220
References	221
<b>WIND DRIVEN OCEAN CIRCULATION THEORY - STEADY FREE FLOW</b>	
by J.C. Marshall	225
Abstract	225
1. Introduction	225
2. Formulation	226
3. Steady-state solutions	230
4. Concluding remarks	243
Acknowledgement	243
References	244
<b>COUPLED OCEAN-ATMOSPHERE MODELS OF EL NINO AND THE SOUTHERN OSCILLATION</b>	
by J.P. McCreary, JR.	247
Abstract	247
1. Introduction	248
2. The model ocean	252
3. The model atmosphere	254
4. Results	256
5. Summary and Discussion	276
Acknowledgements	278
References	279

MAXIMUM ENTROPY PRODUCTION AS A CONSTRAINT IN CLIMATE MODELS by S.D. Mobbs	281
1. Introduction	281
2. Paltridge's minimum entropy exchange principle	282
3. Attempts to justify Paltridge's hypothesis	288
4. Application of the minimum entropy exchange principle in one dimensional energy balance models	291
5. Related studies	312
6. The entropy balance equation	314
7. Conclusions	320
References	321
HEAT TRANSFER BY THERMAL CONVECTION IN A ROTATING FLUID SUBJECT TO A HORIZONTAL TEMPERATURE GRADIENT by R. Hide	325
1. Introduction	325
2. Geostrophy	327
3. Regimes of thermal convection in a rotating fluid annulus	330
4. Patterns of regular non-axisymmetric flow	333
References	335
SOME ASPECTS OF TURBULENT DIFFUSION by M. Lesieur	337
1. Introduction	337
2. Kinematics of isotropic turbulence	340
3. Phenomenology of three-dimensional turbulence	341
4. Phenomenology of two-dimensional turbulence	343
5. Analytical theories of isotropic turbulence	345
6. Diffusion of temperature in stratified turbulence	350
7. Conclusion and discussion	354
8. Acknowledgements	354
References	355
TURBULENT DIFFUSION IN LARGE-SCALE FLOWS by R. Sadourny	359
1. Introduction	359
2. Diffusion of a passive scalar in two-dimensional flow	360
3. Diffusion of vorticity in two-dimensional flow	365
4. Diffusion of potential vorticity in quasi-geostrophic flow	369
References	372
