Contents

<i>Preface</i>	ix
<i>Acknowledgments</i>	xi

Chapter 1 Introduction

1.1 The Static Structure of the Middle Atmosphere	1
1.2 Zonal Mean Temperature and Wind Distributions	6
1.3 Composition of the Middle Atmosphere	9
1.4 The Vertical Distribution of Eddy Amplitudes	15
1.5 Observational Techniques	18
References	20

Chapter 2 Radiative Processes and Remote Sounding

2.1 Introduction	21
2.2 Fundamentals	22
2.3 Gaseous Absorption Spectra	30
2.4 Transmission Functions	49
2.5 Infrared Radiative Exchange and Radiative Damping	64
2.6 Departure from Local Thermodynamic Equilibrium	72
2.7 Absorption of Solar Radiation	82
2.8 Radiative Equilibrium Temperature and Heating-Rate Distributions	91
2.9 Remote Sounding	99
References	110

Chapter 3 Basic Dynamics

3.1 Introduction	113
3.2 The Beta-Plane Approximation and Quasi-Geostrophic Theory	118

vi **Contents**

3.3	The Eulerian-Mean Equations	123
3.4	Linearized Disturbances to Zonal-Mean Flows	125
3.5	The Transformed Eulerian-Mean Equations	127
3.6	The Generalized Eliassen-Palm Theorem and the Charney-Drazin Nonacceleration Theorem	130
3.7	The Lagrangian Approach	133
3.8	Isentropic Coordinates	138
3.9	The Zonal-Mean Equations in Isentropic Coordinates	142
Appendix 3A.	Derivation of Some Equations in Isentropic Coordinates	144
Appendix 3B.	Boundary Conditions on the Residual Circulation	147
References		149

Chapter 4 Linear Wave Theory

4.1	Introduction and Classification of Wave Types	150
4.2	Wave Disturbances to a Resting Spherical Atmosphere	151
4.3	Atmospheric Thermal Tides	157
4.4	Free Traveling Planetary Waves	169
4.5	Forced Planetary Waves	175
4.6	Gravity Waves	188
4.7	Equatorial Waves	200
Appendix 4A.	Ray-Tracing Theory and Wave Action in a Slowly Varying Medium	215
References		218

Chapter 5 Extratropical Planetary-Scale Circulations

5.1	Introduction	220
5.2	The Observed Annual Cycle	221
5.3	Detailed Linear Models of Stationary Planetary Waves in the Middle Atmosphere	239
5.4	Detailed Linear Models of Free Traveling Planetary Waves in the Atmosphere	245
5.5	Barotropic and Baroclinic Instability	248
5.6	Planetary-Wave Critical Layers	253
References		257

Chapter 6 Stratospheric Sudden Warmings

6.1	Introduction	259
6.2	Observed Features of Sudden Warmings	261
6.3	Theoretical Modeling of Sudden Warmings	275
6.4	Conclusions	292
References		294

Chapter 7 The Extratropical Zonal-Mean Circulation

7.1	Introduction	295
7.2	Some Simple Zonally Averaged Models of the Middle Atmosphere	298

7.3 The Upper Mesosphere	305
7.4 The Winter Polar Stratosphere	308
7.5 Interpretation and Generalization	309
References	311

Chapter 8 Equatorial Circulations

8.1 Introduction	313
8.2 The Observed Structure of the Equatorial Quasi-Biennial Oscillation	314
8.3 Theory of the Quasi-Biennial Oscillation	319
8.4 Observed Structure of the Equatorial Semiannual Oscillations	331
8.5 Dynamics of the Equatorial Semiannual Oscillations	333
8.6 Inertial Instability in the Equatorial Zone	338
References	341

Chapter 9 Tracer Transport in the Middle Atmosphere

9.1 Introduction: Types of Tracers	343
9.2 Long-Lived Chemical Tracers	347
9.3 Transport in the Meridional Plane	349
9.4 Formulations of Eddy and Mean-Flow Transport	354
9.5 Dispersive Wave Transport: Irreversible Mixing of Tracers	361
9.6 Troposphere-Stratosphere Exchange	371
9.7 Transport Modeling	377
Appendix 9A. The Transformed Eulerian-Mean Transport for Small-Amplitude Eddies	390
References	391

Chapter 10 The Ozone Layer

10.1 Introduction	392
10.2 The Climatology of Ozone	393
10.3 Elementary Aspects of Photochemical Modeling	398
10.4 Photochemistry of Ozone: Catalytic Cycles	403
10.5 Models of the Natural and Perturbed Ozone Layer	406
Appendix 10A. The Continuity Equation for Chemical Species	413
References	414

Chapter 11 General Circulation Modeling

11.1 Models of the Lower Stratosphere	417
11.2 The GFDL SKYHI Model	422
11.3 Forecasting of Sudden Stratospheric Warmings	428
11.4 Transport Modeling	433
References	442

Chapter 12 Interaction between the Middle Atmosphere
and the Lower Atmosphere

12.1	Introduction	443
12.2	Radiative Links: Deductions from Simple Models	444
12.3	Radiative Links: Deductions from GCMs	446
12.4	Dynamical Links: Vertically Propagating Planetary Waves	450
12.5	Interannual Variability in the Stratosphere	453
	References	461

	Bibliography	463
