Contents

	<i>Preface</i>	page vii
	<i>Acknowledgments</i>	x
CHAPTER ONE	Introduction	1
CHAPTER TWO	Some helpful tools	7
	Phase space	7
	Poincaré section	23
	Spectral analysis of time series	28
	Problems	37
CHAPTER THREE	Visualization of the pendulum's dynamics	40
	Sensitivity to initial conditions	42
	Phase diagrams and Poincaré sections	44
	Time series and power spectra	61
	Basins of attraction	61
	Bifurcation diagrams	68
	Simulations	74
CHAPTER FOUR	Toward an understanding of chaos	76
	The logistic map	77
	Period doubling	81
	The periodic windows	82
	Lyapunov exponent	85
	Entropy	87
	Stretching and folding	89
	The circle map	90
	The horseshoe map	97
	Application to the pendulum	102
	Problems	108

CHAPTER FIVE	The characterization of chaotic attractors	111
	Dimension	112
	Lyapunov exponents	120
	Lyapunov exponents and dimension	124
	Information change and Lyapunov exponents	126
	Problems	129
CHAPTER SIX	Concluding remarks	133
	Chaos in fluid dynamics	133
	Chaotic chemical reactions	137
	Chaos in lasers	139
	Chaos and quantum physics	141
	Foundations of statistical mechanics	142
	<i>Further reading</i>	145
	<i>Appendix A Numerical integration – Runge-Kutta method</i>	146
	<i>Appendix B Computer program listings</i>	150
	<i>References</i>	176
	<i>Index</i>	180
	<i>Diskette order information</i>	182
