CONTENTS

Preface	xi
---------	----

SECTION 1: MODELLING OF MIXING PROCESSES

Effect of macromixing on a competitive/consecutive reaction in a semi-batch stirred reactor : Paul's iodination experiments interpreted by networks-of-zones R Mann, A M El-Hamouz	3
---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	---

The variation of flow pattern and mixing time with impeller spacing in stirred vessels with two Rushton impellers S M Mahmoudi, M Yianneskis	11
-------------------------------------------------------------------------------------------------------------------------------------------------	----

Development of transitional flow mixing impeller R J Weetman	19
-----------------------------------------------------------------	----

Distribution of turbulence characteristics in agitated systems with axial high-speed impeller and baffles I Fort, M Vozny, B Forstova	27
------------------------------------------------------------------------------------------------------------------------------------------	----

A computational study on dispersing gas in a stirred reactor A Bakker, H E Van Den Akker	37
---------------------------------------------------------------------------------------------	----

Measurements and modelling of flow in gas sparged, agitated vessels G K Patterson	47
--------------------------------------------------------------------------------------	----

Simple performance correlations for agitated vessels J M Smith	55
-------------------------------------------------------------------	----

Gradients in production scale bioreactors J Feijen, J J Hofmeester	65
-----------------------------------------------------------------------	----

Solid distribution in slurry reactors stirred with multiple impellers : continuous flow systems M Nocentini, F Magelli	73
---------------------------------------------------------------------------------------------------------------------------	----

SECTION 2: MIXING OPERATIONS

The mixing of miscible liquids with large differences in density and viscosity S S Burmester, C D Rielly, M F Edwards	83
--------------------------------------------------------------------------------------------------------------------------	----

Power input and gas hold up in gas liquid dispersions agitated by axial flow impellers V Machon, C M McFarlane, A W Nienow	91
-------------------------------------------------------------------------------------------------------------------------------	----

Improving Xanthan fermentation performance by changing agitators Z Xueming, A W Nienow, C A Kent, S Chatwin, E Galindo	99
---------------------------------------------------------------------------------------------------------------------------	----

Determination of the mean specific power input in stirred vessels with suspensions R K Geisler, C Buurman, A B Mersmann	107
----------------------------------------------------------------------------------------------------------------------------	-----

A comparison of the efficiency of five agitator designs for solids suspension duties at high solids concentrations N I Heywood, S Rehman, R G Whittemore	117
The design of agitated dissolution tanks P Ditzl, F Rieger, I Rousar	131
Modelling and control of multistage mixer extractors C Tsouris, L L Tavlarides	139
Local measurements of liquid and solid velocities and of particle sizes in stirred suspensions with a phase doppler particle analyser P Guiraud, J Costes, J Bertrand, J Bousquet	145
Hydrodynamic characteristics of a gas-inducing impeller G M Evans, C D Rielly, J F Davidson, K J Carpenter	153
Heat transfer in mechanically stirred gas-liquid system J Karcz, F Streck	163
Heat and mass transfer efficiencies of multi-impeller gas-viscous liquids contactors H Linden, H Desplanches, Y Gaston-Bonhomme, J L Chevalier, M Bruxelmann, V Dufour	173
 SECTION 3: EXPERIMENTAL TECHNIQUES	
Measurement of concentration fluctuations during mixing in a stirred tank and in a channel flow by laser induced fluorescence spectroscopy C André, R David, J N Gence, J Villermaux	183
Reynolds stresses and stirring regimes of a Rushton turbine M Mahouast	191
Micromixing behaviour in a batch vessel with several impellers using alkali-fluorescent dye system Y Hirofuji, T Inoue, Y Nagase	197
An experimental study of micromixing using two parallel reactions J R Bourne, S Yu	207
LDA measurements of flow in stirred gas-liquid reactors V P Mishra, J B Joshi	217
A study of ventilated gas cavities on disc-turbine blades S A Manning, G J Jameson	225
Numerical particle tracking in a turbine agitated vessel K A Kusters, J G Wijers, D Thoenes	233

Residence time distribution of solid and liquid phase in a stirred tank reactor L Guo, S Yang	247
Local wall heat transfer coefficients using surface calorimeters J B Fasano, R S Brodkey, S J Haam	253
