Preface	viii
Acknowledgments	xiii

## I INTRODUCTION: CONSERVATION OF ENERGY 1

1.1 Thermodynamics: A Science of Measurable Quantities	2
1.2 Conservation of Energy in Mechanics	4
1.3 Conservation of Energy: A System of Point Masses	6
1.4 A Few Examples of Energy Conservation	10
*1.5 Kinetic Energy Exchanges in Molecular Collisions	10
1.6 Working and Heating	16
A Simple Example of Working	18
1.7 Some Necessary Thermodynamic Concepts and Jargon	21
1.8 Thermodynamic Internal Energy and the First Law	22
Some Irreverent Thoughts About Heat	24
Selected References and Suggestions for Further Reading	29
Problems	30

## 2 IDEAL GAS LAW: PRESSURE AND ABSOLUTE TEMPERATURE 34

2.1 Gas Pressure and Absolute Temperature: What Are They?	35
Ideal Gas Law	36
A Perspective on Units	40
Pressure Measurement: Barometer and Manometer	43
Temperature Scales and Thermometers	45
Atmospheric Temperature Measurements	47
A Linguistic Sin of Meteorologists: Repent!	49
The Nature of Statistical Laws	49
History of the Gas Law	51
2.2 Pressure Decrease with Height: Continuum Approach	54
Thickness: A Surrogate for Average Temperature	58
2.3 Pressure Decrease with Height: Molecular Approach	59
2.4 The Maxwell-Boltzmann Distribution of Molecular Speeds	60
Why Don't Air Molecules Escape to Space?	64

2.5 Intermolecular Separation, Mean Free Path, and Collision Rate	66
Mean Free Path	67
Intermolecular Collision Rate	69
Local Thermodynamic Equilibrium	70
2.6 Is the Pressure Gradient a Fundamental Force of Nature?	71
2.7 Surface Pressure and Weight of the Atmosphere	72
Flat Earthers Beware!	73
Why Aren't We Crushed by Airplanes Flying Overhead?	73
2.8 The Atmosphere Is a Mixture of Gases: Dalton's Law	74
Mean Molecular Weight	75
Selected References and Suggestions for Further Reading	79
Problems	81

### 3 SPECIFIC HEATS AND ENTHALPY: ADIABATIC PROCESSES 89

3.1 A Critical Discussion of the Mathematics of Thermodynamics	89
Those Accursed Differentials	93
Differentials and Infinitesimals	97
Are Differentials Necessary in Thermodynamics?	97
3.2 Specific Heats and Enthalpy	99
An Incompressibility Paradox: The Perils of Idealization	104
Enthalpy of the (Hydrostatic) Atmosphere	105
3.3 Adiabatic Processes: Poisson's Relations	106
3.4 Dry Adiabatic Lapse Rate	108
Do Pistons and Cylinders Inhabit the Atmosphere?	109
3.5 Stability and Buoyancy	111
Buoyancy	112
Dry Adiabatic Lapse Rate and Stability	114
3.6 Specific Heats of Gas Molecules	114
The Ratio of Working to Heating at Constant Pressure	120
3.7 Heat Capacities of Mixtures of Gases	123
Water Vapor Demystified	123
Isobaric, Adiabatic Mixing of Moist Parcels	124
Selected References and Suggestions for Further Reading	127
Problems	127

### 4 ENTROPY 135

4.1 Entropy of an Ideal Gas	136
Entropy Change In a Free Expansion	137
Entropy Changes Upon Heating and Cooling	138
The Second Law and Stability	145
Entropy of Mixtures; Entropy of Mixing and Gibbs's Paradox	146
Entropy Changes Upon Mixing of Two Gases With Different Temperatures and Pressures	148
An Entropic Derivation of Joule's Law	149
Entropy and Disorder: A Persistent Swindle	150
*Integrating Factor and Entropy	152
4.2 Entropy Changes of Liquids and Solids	155
4.3 Potential Temperature: Meteorologists' Entropy	157
Parcel Oscillations	159
4.4 Atmospheric Applications of the Second Law	161
Entropy Maximization in the Atmosphere	164
*Entropy Maximization in the Atmosphere: General Case	169
Thermodynamic Efficiency: The Carnot Cycle	171

Entropic Derivation of the Dry Adiabatic Lapse Rate	175
Selected References and Suggestions for Further Reading	177
Problems	178

## 5 WATER AND ITS TRANSFORMATIONS 181

5.1 Evaporation and Condensation of Water Vapor	182
5.2 Measures of Water Vapor in Air	185
Dew, Frost, Defrosters, Dehumidifiers, and Swamp Coolers	188
5.3 The Clausius–Clapeyron Equation	192
Other Enthalpy Differences	195
Entropy and Enthalpy Differences in Phase Changes	196
Temperature Dependence of Enthalpy of Vaporization	197
Temperature Dependence of Saturation Vapor Pressure: A More Accurate Equation	197
Difference Between the Saturation Vapor Pressure Above Ice and Above Subcooled Water at the Same Temperature	200
Dew Points and Human Comfort	202
Lapse Rate of the Boiling Point	203
5.4 van der Waals Equation of State	204
Must a Liquid Boil in Order to Evaporate?	214
Can a Solid Boil Before it Melts?	215
Departures From Ideality According to the van der Waals Equation	215
*The Maxwell Construction and Saturation Vapor Pressure	216
An Overview of the Many Successes of the van der Waals Equation	218
5.5 Phase Diagrams: Liquid–Vapor; Liquid–Solid–Vapor; Triple Point	218
5.6 Free Energy	223
5.7 Effect of Air Pressure on Saturation Vapor Pressure	226
5.8 Lowering of Vapor Pressure by Dissolution	229
5.9 Air in Water: Henry's Law	233
Change in Saturation Vapor Pressure with Total Pressure	237
5.10 Size Dependence of Vapor Pressure: Droplets and Bubbles	238
Droplet Vapor Pressure: The Kelvin Equation	239
Bubble Vapor Pressure	243
Mechanical Equilibrium of Bubbles and Droplets: The Laplace Equation	247
Boiling Demystified and More Heresy	250
5.11 Vapor Pressure of Solution Droplets	252
Selected References and Suggestions for Further Reading	256
Problems	260

## 6 MOIST AIR AND CLOUDS 272

6.1 Precipitable Water in the Atmosphere	272
6.2 Lapse Rate of the Dew Point: Level of Cloud Formation	274
6.3 Density of Moist Air: Virtual Temperature	278
6.4 Wet-Bulb Temperature	281
Is the Temperature of a Wet Bulb the Wet-Bulb Temperature?	285
Humidity Measurements	286
6.5 Lapse Rate for Isentropic Ascent of a Saturated Parcel	287
Equivalent Potential Temperature and Wet-Bulb Potential Temperature	292
6.6 Thermodynamic Diagrams	299
A Smattering of History	300
Skew T–log $p$ Diagram	301
Tephigram	307
Other Diagrams	308

6.7 Stability and Cloud Formation	311
Entrainment	317
6.8 Mixing Clouds	322
6.9 Cloud Formation on Ascent and Descent	324
Selected References and Suggestions for Further Reading	327
Problems	329

## **7 ENERGY, MOMENTUM, AND MASS TRANSFER** 335

7.1 Energy Transfer	335
Fourier Conduction Law	337
Thermal Resistance	338
An Application of Thermal Resistance to Consumer Fraud	340
Convective Transfer of Energy	342
Conductivity of a Gas: A Few Myths Exploded	343
The Effective Conductivity of Porous Materials	347
The Skin Diver's Fallacy	348
Newton's Law of Cooling: A Study in Error Propagation	350
The Freezing of Lakes	354
Radiative Energy Transfer	356
Radiation and Convection Combined: Dew and Frost Formation	357
To Insulate or Not to Insulate?	359
Radiation in Porous Media	360
Newton's Law of Cooling According to Newton	362
*The Thermometer As a Low-pass Filter	363
Engineer Heal Thyself	365
7.2 Momentum Transfer: Viscosity	366
7.3 Mass Transfer: Diffusion	372
Diffusion Coefficient	374
Growth of Cloud Droplets	376
Selected References and Suggestions for Further Reading	379
Problems	380

Selected Physical Constants 384

Bibliography 386

Index 395
