CONTENTS

	Foreword	xiii
	Acknowledgements	xv
Chapter 1	Introduction: units and dimensions	1
	1.1 Historical perspective of meteorology	1
	1.2 Dimensions	3
	1.3 Units	4
	1.4 Problems	5
Chapter 2	The thermodynamics of dry clean air	7
	2.1 Structure and composition of the atmosphere	7
	2.2 The scientific method	8
	2.3 The equation of state of a perfect gas	9
	2.4 The universal gas constant	12
	2.5 Mixture of gases	12
	2.6 Molecular weight of dry air	13
	2.7 Work	13
	2.8 Heat	16
	2.9 The first law of thermodynamics	17
	2.10 Specific heats of gases	17
	2.11 Adiabatic process	20
	2.12 Potential temperature	21
	2.13 Entropy	21
	2.14 Problems	22
Chapter 3	The aerological diagram	24
	3.1 Introduction	24
	3.2 Different kinds of diagrams	24
	3.3 The skew ($T, -\log p$) diagram	27
	3.4 The tephigram	27
	3.5 Work and energy on the tephigram	29
	3.6 Problems	30

Chapter 4	The thermodynamics of moist air	32
4.1	Water substance and water vapour	32
4.2	Equation of state for water vapour	35
4.3	Specific heats of water substance	36
4.4	Change of phase	36
4.5	Variation of latent heat with temperature	37
4.6	Clapeyron's equation	37
4.7	Clapeyron and global warming	42
4.8	Supercooled water	43
4.9	Moist air	44
4.10	The virtual temperature	46
4.11	Specific heats of moist air	46
4.12	Adiabatic process of unsaturated air	47
4.13	The adiabatic processes for moist saturated air	47
4.14	Exact equation for the rain stage of the pseudo-adiabatic process	48
4.15	Exact equation of the reversible saturation adiabatic process	49
4.16	Simplified equation of the adiabatic process of saturated air	50
4.17	Isobaric warming and cooling	50
4.18	Hygrometric equation	51
4.19	Construction of saturation adiabats	52
4.20	Normand's theorem	53
4.21	Some useful empirical relationships	53
4.22	Problems	54
Chapter 5	Hydrostatic equilibrium	55
5.1	What is hydrostatic equilibrium?	55
5.2	The hydrostatic equation	55
5.3	Definition of lapse rate	56
5.4	The thickness equation	57
5.5	Pressure–height formulae in model atmospheres	57
5.5.1	Dry atmosphere with a constant lapse rate	58
5.5.2	Height and lapse rate of a homogeneous atmosphere	58
5.5.3	The dry adiabatic atmosphere	59
5.6	Stability and instability	61
5.7	Energy of displacement	65
5.8	Convective available potential energy	68
5.9	Lapse rate for unsaturated air	69
5.10	Lapse rate for saturated air	69
5.11	Problems	71

Chapter 6	The equations of motion: I The Coriolis force	72
6.1	Introduction	72
6.2	Motion as observed with reference to a fixed frame of coordinates	73
6.3	Motion as observed in a rotating frame of coordinates	74
6.3.1	The bear and the penguin	74
6.3.2	The carousel or merry-go-round	75
6.3.3	A simple practical example of the Coriolis force	75
6.3.4	Simple mathematical derivation of the Coriolis force	76
6.3.5	The Foucault pendulum	77
6.4	Conclusion	78
6.5	Problems	78
<hr/>		
Chapter 7	The equations of motion: 2 Derivation in various coordinates	79
7.1	The pressure gradient force	79
7.2	The spherical earth	81
7.3	The equations of motion	82
7.4	Derivation of the components of the Coriolis force from the law of the conservation of angular momentum	83
7.5	Derivation of the equations of motion in plane coordinates from rotating axes	84
7.6	Derivation of the equations of motion in rotating polar coordinates	86
7.7	Derivation of the three-dimensional equations of motion in a spherical coordinate system	88
7.8	Equations of motion in tangential curvilinear coordinates	90
7.9	Problems	91
<hr/>		
Chapter 8	Balanced flow	93
8.1	Introduction	93
8.2	The geostrophic equation	93
8.3	The gradient wind equation	95
8.3.1	Gradient wind solution for the anticyclonic case	98
8.3.2	Gradient wind solution for the cyclonic case	99
8.4	The cyclostrophic wind	99

	8.5	The inertial wind	99
	8.6	The 'strange roots' of the gradient wind equation	100
	8.7	The balance equation	101
	8.8	Problems	101
<hr/>			
Chapter 9		Unbalanced flow	103
	9.1	Introduction	103
	9.2	The ageostrophic wind	103
	9.3	The isallobaric wind	104
	9.4	Pressure changes	106
	9.5	Divergence and convergence	108
	9.6	Pressure changes in geostrophic flow	112
	9.7	Measurement of divergence	115
	9.8	Vertical motion	116
	9.9	Problems	117
<hr/>			
Chapter 10		Euler and Lagrange	118
	10.1	Introduction	118
	10.2	Geostrophic adjustment: example of the Lagrangian method	119
	10.3	The case of the anticyclone	122
	10.4	The case of the variable Coriolis parameter	123
	10.5	Divergence of parcels in a fluid	126
	10.6	Streamlines	127
	10.7	The stream function	128
	10.8	Problems	128
<hr/>			
Chapter 11		Vorticity	130
	11.1	Introduction	130
	11.2	Circulation	130
	11.3	Vorticity	131
	11.4	Derivation of expressions for vorticity	134
	11.5	Relative and absolute vorticity	135
	11.6	The divergence–vorticity relation	136
	11.7	A simple wave pattern	139
	11.8	Shear vorticity in a jet stream pattern	140
	11.9	Constant absolute vorticity trajectories	141
	11.10	Problems	143
<hr/>			
Chapter 12		The long-wave equations	144
	12.1	Introduction	144
	12.2	Effects of curvature and latitude vorticity on wave translation	144

12.3	The Rossby long-wave equation	146
12.4	The long-wave theory	147
12.5	The stationary wavelength	148
12.6	Absolute vorticity of layer of constant mass	150
12.7	Potential vorticity	151
12.8	Problems	151

Chapter 13	The upper air synoptic chart	152
13.1	Introduction	152
13.2	Pressure as a vertical coordinate	152
13.3	The thermal wind	153
13.4	The thickness of a standard isobaric layer	154
13.5	Differential analysis of the upper air synoptic chart	155
13.6	Barotropic and baroclinic structure	157
13.7	Advection of thickness lines	158
13.8	M.s.l. pressure maps versus topography of 1000 mb charts	160
13.9	Vorticity on isobaric surfaces	160
13.10	The velocity potential	161
13.11	Problems	162

Chapter 14	Friction in the boundary layer of the atmosphere	163
14.1	Introduction	163
14.2	The Guldberg–Mohn approximation	163
14.3	Balanced frictional flow	164
14.4	The Newtonian concept of friction	165
14.5	The surface layer	167
14.6	The spiral or Ekman layer	168
14.7	Problems	174

Chapter 15	Some more advanced equations	176
15.1	The divergence equation	176
15.2	The balance equation	177
15.3	The omega equation	178
15.4	Problems	181

Chapter 16	Synoptic observations and analysis	182
16.1	Introduction	182
16.2	Synoptic observations and plotting	183
16.3	Analysis methods	203
16.3.1	Objective analysis	204
16.3.2	Subjective analysis	205

	16.3.3	Streamlines	206
	16.3.4	Trends	207
	16.4	Problems	209
<hr/>			
Chapter 17	Simple synoptic models		210
	17.1	Introduction	210
	17.2	Some common synoptic patterns	210
	17.3	Weather associated with synoptic systems	211
	17.4	Definition of a front	212
	17.5	Evolution of a wave depression	214
	17.6	Frontal theory	216
	17.7	Other depressions	221
	17.8	Steering and development	225
	17.9	Blocking	232
	17.10	Tropics	233
	17.11	Problems	233
<hr/>			
Chapter 18	The tropical cyclone		235
	18.1	Introduction	235
	18.2	Structure and energy source	237
	18.3	Genesis	244
	18.4	Steering and development	246
		18.4.1 Movement	247
		18.4.2 Development	252
	18.5	Forecasting skill	253
	18.6	Problems	255
<hr/>			
Chapter 19	Radiant energy transfer		256
	19.1	Historical concepts, cavities and black bodies	256
	19.2	Thermodynamic cycles	264
	19.3	The Stefan–Boltzmann law	268
	19.4	The black body spectrum and Wien's displacement law	270
	19.5	Wien's expression for the frequency distribution of radiation	275
	19.6	Oscillators, radiators and spectra	275
	19.7	Planck's quantum theory	277
	19.8	Relationship between the Stefan–Boltzmann, Wien and Planck laws	280
<hr/>			
Chapter 20	The radiation balance of the earth		283
	20.1	Radiation at the earth's surface	283
	20.2	Net radiation and albedo	285

20.3	Net fluxes of solar and terrestrial radiation	287
20.4	The wavelength separation of solar and terrestrial radiation	289
20.5	The planetary temperature	290
20.6	Simple models of the greenhouse effect	292
20.7	Simpson's theory of atmospheric radiation transfer	294

Chapter 21	Climate change	299
21.1	Introduction	299
21.2	Definitions	299
21.3	Global warming	300
21.4	Climate variability	300
21.5	The greenhouse effect	301
21.6	The observed global temperature record	302
21.7	Random walks	303
21.8	The debate	305
21.9	The MSU data	305
21.10	The ENSO phenomenon	307
21.11	Numerical modelling of the climate	309
	21.11.1 The equilibrium model	310
	21.11.2 The transient model	311
21.12	The global warming debate continues	311
21.13	Climate prediction	312
21.14	Problems	313
	Bibliography	314
	Index	318
