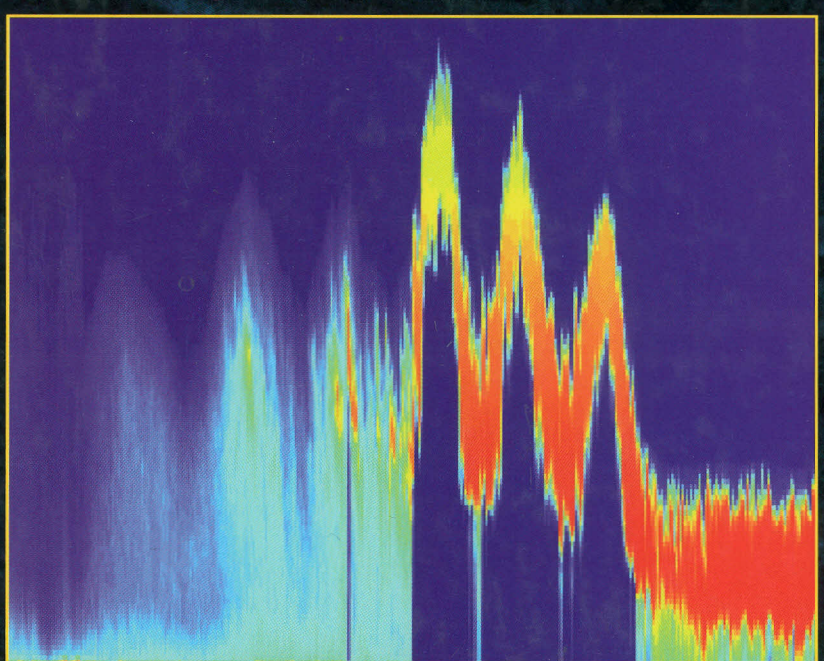
Small Scale PROCESSES in Geophysical Fluid Flows



LAKSHMI H. KANTHA

CAROL ANNE CLAYSON

Foreword by Walter Munk

INTERNATIONAL GEOPHYSICS SERIES, VOLUME 67

Small Scale Processes *in* Geophysical Fluid Flows

Foreword xiii
Preface xv
List of Acronyms xix
Prologue xxv

Chapter 1

Turbulence

1.1 Characteristics of Turbulent Flows 2
1.2 Origin and Types of Turbulence 6
1.3 Statistical Description of Turbulence 9
1.4 The Important Scales of Turbulence 16
1.4.1 Additional Strain Rates and Complex Turbulence 21
1.5 Universal Equilibrium Range and Inertial Subrange 29
1.6 Von Karman Logarithmic Law of the Wall 35
1.7 Governing Equations 39
1.7.1 Reynolds Averaging 43
1.8 Turbulence Closure 54
1.9 Description in Spectral Space 64
1.10 Governing Equations in Spectral Space 67
1.11 Wavelet Transforms in Turbulence 74
1.12 Large Eddy Simulations 76
1.13 Renormalization Group Analysis (RNG) 93
1.14 Direct Numerical Simulations (DNS) 103
List of Symbols 108

Chapter 2
Oceanic Mixed Layer

2.1 Importance 113
2.2 Salient Characteristics 115
2.2.1 Differences with the ABL 119
2.3 Penetrative Solar Heating 123
2.4 Langmuir Circulation 132
2.5 Convective Mixing 143
2.5.1 Deep Convection in the Ocean 154
2.6 Mixing Processes in Midlatitude Oceans 157
2.7 Equatorial Mixing Processes 160
2.8 Mixing under Sea-Ice Cover 168
2.9 Bottom/Benthic Boundary Layer 186
2.10 Modeling the Ocean Mixed Layer 192
2.10.1 Slab Models 195
2.10.2 Diffusion Models 201
2.10.3 Second-Moment Closure Mixed Layer Models 205
2.10.4 Comparison with Oceanic Data Sets 222
2.10.5 Effect of Rotation and Curvature 237
2.11 Chemical and Biological Mixing Models 244
2.11.1 Modeling Chemistry—The Inorganic Carbon Cycle 250
2.11.2 Modeling Biology—The Nitrogen Cycle 258
2.11.3 Scaling Arguments 276
List of Symbols 279

Chapter 3
Atmospheric Boundary Layer

3.1 Salient Characteristics 284
3.1.1 Ground-Based Remote Sensing 288
3.2 Geostrophic Drag Laws 290
3.3 Surface Layer (Monin–Obukhoff Similarity Theory) 302
3.4 Convective Atmospheric Boundary Layer (CABL) 323
3.5 Nocturnal Atmospheric Boundary Layer (NABL) 338
3.6 Marine Atmospheric Boundary Layer (MABL) 353
3.7 Cloud-Topped Atmospheric Boundary Layer (CTBL) 363
3.8 Flow over Topographic Changes—Downslope Winds 371

3.9 Flow over Plant Canopy 388
3.10 Internal Boundary Layers 397
3.11 Modeling the Atmospheric Boundary Layer 407
3.11.1 Slab Models 407
3.11.2 Multilevel Models 412
List of Symbols 413

Chapter 4
Surface Exchange Processes

4.1 Surface Energy Balance 418
4.2 Radiative Flux Parameterization 419
4.2.1 Downwelling Shortwave Radiative Flux 422
4.2.2 Downwelling Longwave Radiative Flux 424
4.2.3 Upwelling Shortwave and Longwave Radiative Fluxes 426
4.3 Flux Balance at the Air–Sea Interface 427
4.4 Flux Balance at the Air–Land Interface 432
4.5 Bulk Exchange Coefficients 434
4.5.1 Flux Measurements 437
4.5.2 Measurements of Air–Sea Bulk Transfer Coefficients 447
4.5.3 Measurements of Bulk Transfer Coefficients over Land 465
4.6 Surface Renewal Theory 466
4.6.1 High Wind Speeds 477
4.7 Cool Skin of the Ocean 480
4.8 Satellite-Measured Fluxes 494
List of Symbols 507

Chapter 5
Surface Waves

5.1 Salient Characteristics 512
5.2 Linear Waves from Potential Theory 513
5.3 Finite-Amplitude Effects 525
5.4 Resonant Wave–Wave Interactions 529
5.5 Wind-Wave Spectrum 541
5.6 Similarity Theory for Growth of Wind-Waves 561
5.7 Wind-Wave Generation, Dissipation, and Propagation 566
5.7.1 Generation 566
5.7.2 Dissipation 580
5.7.3 Propagation 584

5.8 Wind-Wave Prediction 590
5.9 Breaking Waves 603
5.10 Satellite Measurements of Ocean Waves 609
List of Symbols 613

Chapter 6
Internal Waves

6.1 Salient Characteristics 616
6.2 Governing Equations 625
6.3 Vertically Propagating Small Scale Internal Waves 628
6.4 Vertical Standing Modes 637
6.5 Generation, Dissipation, Propagation, and Interaction 643
6.5.1 Generation 643
6.5.2 Dissipation 648
6.5.3 Propagation 650
6.5.4 Interaction 656
6.6 Garrett and Munk Spectrum 658
6.7 Internal Wave Solitons 668
6.8 Mixing in the Deep Ocean (Abyssal Mixing) 676
List of Symbols 682

Chapter 7
Double-Diffusive Processes

7.1 Salient Characteristics 685
7.1.1 Salt Fingers 686
7.1.2 Diffusive Convection 688
7.1.3 Staircases in the Ocean 691
7.1.4 Density Intrusions 697
7.1.5 Meddies 699
7.1.6 Importance of Double Diffusion 703
7.2 Conditions for the Onset of Double Diffusion 707
7.3 Experimental Results 710
7.4 Analytical Models 716
7.4.1 Non-Steady-State Model 716
7.4.2 Quasi-Steady-State Model 724
7.4.3 Salt Fingers in Shear 728
7.5 Parameterization of Double-Diffusive Mixing 729
List of Symbols 732

Chapter 8
Lakes and Reservoirs

8.1 Salient Characteristics 735
8.2 Thermal Structure and Seasonal Modulation 737
8.3 Mixing Mechanisms 751
8.4 Lake Nyos—Thermal and CO_2 Structure 754
8.5 Crater Lake, Oregon 760
8.6 Lake Baikal, Russia 768
List of Symbols 772

Appendix A
Units

A.1 The Buckingham PI Theorem 773
A.2 Useful Quantities 776
A.2.1 SI (International System) Units and Conventions 776
A.2.2 Useful Conversion Factors 777
A.2.3 Useful Universal Constants 778
A.2.4 Useful Geophysical Constants 779
A.2.5 Useful Physical Constants 780
A.2.6 Useful Dynamical Quantities 781

Appendix B
Equations of State

B.1 Equation of State for the Ocean 783
B.2 Equation of State for Freshwater Lakes 785
B.2.1 Equation of State with Dissolved CO_2 789
B.3 Equation of State for the Atmosphere 790

Appendix C
Important Scales and Nondimensional Quantities

C.1 Length Scales 793
C.2 Timescales 795
C.3 Velocity Scales 795
C.4 Nondimensional Quantities 796

Appendix D
Wave Motions
