

The background of the book cover features a dramatic aerial photograph of a vast ocean under a cloudy sky. The clouds are thick and white, with bright sunlight filtering through, creating a high-contrast scene where the dark blue of the ocean meets the bright white of the clouds.

---

<i>Preface</i>	ix
<b>1 Basic definitions</b>	1
<b>2 Some useful mathematical and physical topics</b>	5
2.1 Exact differentials	5
2.2 Kinetic theory of heat	7
<b>3 Early experiments and laws</b>	11
3.1 The first law of Gay-Lussac	11
3.2 The second law of Gay-Lussac	12
3.3 Absolute temperature	13
3.4 Another form of the Gay-Lussac laws	13
3.5 Boyle's law	14
3.6 Avogadro's hypothesis	14
3.7 The ideal gas law	15
3.8 A little discussion on the ideal gas law	16
3.9 Mixture of gases – Dalton's law	17
Examples	19
Problems	22
<b>4 The first law of thermodynamics</b>	23
4.1 Work	23
4.2 Definition of energy	25
4.3 Equivalence between heat and work done	27
4.4 Thermal capacities	28
4.5 More on the relation between $U$ and $T$ (Joule's law)	30
4.6 Consequences of the first law	33
Examples	40
Problems	46

<b>5 The second law of thermodynamics</b>	49
5.1 The Carnot cycle	49
5.2 Lessons learned from the Carnot cycle	52
5.3 More on entropy	56
5.4 Special forms of the second law	58
5.5 Combining the first and second laws	60
5.6 Some consequences of the second law	61
Examples	67
Problems	70
<b>6 Water and its transformations</b>	73
6.1 Thermodynamic properties of water	74
6.2 Equilibrium phase transformations – latent heat	77
6.3 The Clausius–Clapeyron (C–C) equation	79
6.4 Approximations and consequences of the C–C equation	81
Examples	86
Problems	89
<b>7 Moist air</b>	93
7.1 Measures and description of moist air	93
7.1.1 Humidity variables	93
7.1.2 Mean molecular weight of moist air and other quantities	95
7.2 Processes in the atmosphere	97
7.2.1 Isobaric cooling – dew and frost temper- atures	97
7.2.2 Adiabatic isobaric processes – wet-bulb temperatures	100
7.2.3 Adiabatic expansion (or compression) of unsaturated moist air	103
7.2.4 Reaching saturation by adiabatic ascent	104
7.2.5 Saturated ascent	109
7.2.6 A few more temperatures	113
7.2.7 Saturated adiabatic lapse rate	114
7.3 Other processes of interest	116
7.3.1 Adiabatic isobaric mixing	116
7.3.2 Vertical mixing	118
Examples	120
Problems	125
<b>8 Vertical stability in the atmosphere</b>	129
8.1 The equation of motion for a parcel	129
8.2 Stability analysis and conditions	131
8.3 Other factors affecting stability	136
Examples	136
Problems	139

<b>9 Thermodynamic diagrams</b>	143
9.1 Conditions for area-equivalent transformations	143
9.2 Examples of thermodynamic diagrams	145
9.2.1 The tephigram	145
9.2.2 The emagram	147
9.2.3 The skew emagram ( $T-\ln p$ ) diagram)	148
9.3 Graphical representation of thermodynamic variables in a diagram	151
9.3.1 Using diagrams in forecasting	152
Examples	154
Problems	156
<b>10 Beyond this book</b>	159
10.1 Basic predictive equations in the atmosphere	159
10.2 Moisture	161
<b>References</b>	163
<b>Appendix</b>	165
Table A1	165
Table A2	166
Table A3	167
The skew ( $T-\ln p$ ) diagram	168
<b>Index</b>	169
