Contents

Preface	ix
PART I Fluid Mechanics Review	1
1 Rotating Fluid Phenomena	3
2 Mass and Momentum Conservation	23
2.1 Eulerian Mechanics	23
2.2 Mass Conservation	23
2.3 Force and Momentum	26
2.4 Navier-Stokes Equations	29
2.5 Dimensionless Equations and Ratios	35
3 Potential (Inviscid) Flow	43
3.1 Bernoulli Equation	43
3.2 Stream Functions and Velocity Potentials	45
3.3 Flow Past a Circular Cylinder	48
3.4 Pressure Components	53
4 Boundary Layers and Turbulence	57
4.1 Introduction and Two Solutions by Stokes	57
4.2 Prandtl Boundary Layer Equations	60
4.3 Flat Plate and Cylinder Solutions	64
4.4 Momentum Integral Equation	67
4.5 Turbulence and Stability	70
5 Wave Theory	77
5.1 Introduction and Definitions	77
5.2 Longitudinal Waves	84
5.3 Transverse Waves	87
5.4 Mach Cones	93

PART II Rotating Fluid Theory	97
6 Rotating Coordinate Systems	99
6.1 Intermediate Reference Frames	99
6.2 Fluids in a Rotating Frame	102
6.3 Ekman and Rossby Numbers	104
6.4 Application Examples	106
7 Coriolis Phenomena	113
7.1 Coriolis Forces vs. Accelerations	113
7.2 Coriolis and Angular Momentum	117
7.3 Coriolis Force-Acceleration Criteria	119
7.4 Application Examples	121
8 Rotation, Vorticity, and Circulation	127
8.1 Rotation	127
8.2 Vorticity	128
8.3 Circulation and Stokes Theorem	134
8.4 Application Examples	137
9 Vorticity as the Variable	145
9.1 Vorticity in Navier-Stokes Equations	145
9.2 Viscous Production of Vorticity	146
9.3 Relative Vorticity	150
9.4 Application Examples	150
10 Vortex Dynamics	159
10.1 Vortex Interactions in Two Dimensions	159
10.2 Conservation of Vorticity and Circulation	163
10.3 The Formula of Biot and Savart	169
10.4 Rankine's Combined Vortex	170
10.5 Vortex Intensification by Stretching	173
10.6 Application Examples	176
11 Secondary Flows	183
11.1 Boundary Layer Review	183
11.2 A Rotating Disk in a Stationary Fluid	183
11.3 A Rotating Fluid above a Stationary Surface	188
11.4 Enclosed Secondary Flows	191
11.5 Application Examples	194

12	Circular Pathline Flows	201
12.1	Theoretical Criteria	201
12.2	Some Important Flows	202
12.3	Application Examples	209
13	Rotation and Inertial Waves	215
13.1	Rayleigh Instability	215
13.2	Stability of Circular Pathline Flows	217
13.3	Rossby Waves and Inertial Waves	219
13.4	Atmospheric Rossby Waves I	222
13.5	Instability and Turbulence	225
13.6	Application Examples	226
	PART III Rotating Fluid Applications	233
14	Pipes, Channels, and Rivers	235
14.1	Swirl in Straight Sections	235
14.2	Secondary Flow in Curved Sections	239
14.3	River Meandering	244
14.4	Abutment Undercutting	245
14.5	Study and Research Projects	246
15	Rotors and Centrifuges	251
15.1	Thin Disk in a Housing	251
15.2	Flow in a Cylindrical Annulus	254
15.3	Centrifuges	255
15.4	Cyclone Separators	260
15.5	Study and Research Projects	261
16	Wings, Lift, and Drag	265
16.1	Circulation and Lift (Inviscid)	265
16.2	Circulation and Lift (Viscous)	267
16.3	Kutta-Zhukowskii Theory	269
16.4	Finite Wings and Vortices	270
16.5	Vertical Momentum and Induced Drag	273
16.6	Study and Research Projects	275
17	Turbomachinery	279
17.1	Definitions and Classifications	279
17.2	Internal Flow Characteristics	287

17.3	Torque and Power Output	289
17.4	Flow Calculations	291
17.5	Performance Criteria	298
17.6	Study and Research Projects	300
18	Liquids in Precessing Spacecraft	305
18.1	Rigid-Body Dynamics	305
18.2	Energy Dissipation and Stability	309
18.3	Solution: Analysis and Computation	311
18.4	Solution: Scaled Experiments	313
18.5	Study and Research Projects	316
19	The Earth, Sun, and Moon	319
19.1	Introduction	319
19.2	Earth and Earth-Sun-Moon Dynamics	320
19.3	Motions in the Liquid Core	322
19.4	Chandler Wobble	325
19.5	Tides and Earth-Sun-Moon Dynamics	327
19.6	Study and Research Projects	329
20	Atmospheric Circulation	333
20.1	Introduction	333
20.2	Convective Flow Patterns	336
20.3	Coriolis Phenomena	338
20.4	Planetary Flow Dynamics	341
20.5	Atmospheric Rossby Waves II	343
20.6	Study and Research Projects	344
21	Oceanic Circulation	349
21.1	Flow Patterns and Energy Sources	349
21.2	Coriolis and Oceanic Gyres	352
21.3	Western Intensification and Elevated Centers	353
21.4	Localized Flow Phenomena	355
21.5	Some Quantitative Analyses	357
21.6	Study and Research Projects	361
22	Intense Atmospheric Vortices	365
22.1	Whirlwinds and Dust Devils	365
22.2	Large-Scale Vortex Storms	366
22.3	Hurricanes (Typhoons)	368
22.4	Tornadoes	373

22.5	Study and Research Projects	375
------	-----------------------------	-----

Appendices

A	Mathematical Relationships	379
A.1	Vectors	379
A.2	Matrices	379
A.3	Direction Cosine Matrices	380
A.4	Dyadics and Tensors	382
A.5	The Del Operator ∇	382
A.6	Operations Using ∇	383
B	Stream Functions and Velocity Potentials	385
B.1	Summary	385
B.2	Basic Flows	385
B.3	Sums of Two Flows	386
B.4	Cylinders and Vortex Pairs	387
C	Equations of Motion	389
C.1	Cartesian	389
C.2	Cylindrical	389
C.3	Spherical	390
D	Fluid Properties	393
D.1	Units	393
D.2	Properties of Air	393
D.3	Properties of Water	394
D.4	Common Gases and Liquids	394
D.5	Compressible Fluids	395
E	Geophysical Data	397
E.1	The Earth	397
E.2	The Sun	397
E.3	The Moon	397
E.4	The Planets	398
E.5	The Oceans	398
E.6	The Standard Atmosphere	399
	References	401
	Index	415
