Contents

	<i>Preface</i>	page xi
1	Basic thermodynamic concepts	1
	1.1 Description of the atmospheric thermodynamic state	1
	1.2 Basic definitions and terminology	3
	1.3 Description of the state of homogeneous systems	7
	1.4 Problems	12
2	Budget equations	13
	2.1 General form of the budget equation	14
	2.2 Meteorological applications to the budget equation	17
	2.3 Summary and additional remarks	19
	2.4 Appendix	20
	2.5 Problems	20
3	The first law of thermodynamics	22
	3.1 Introduction	22
	3.2 The internal energy and the first law of thermodynamics	24
	3.3 The enthalpy	31
	3.4 Clausius–Kirchhoff relations	33
	3.5 The prognostic equation for temperature involving pressure	35
	3.6 The prognostic equation for temperature involving v	36
	3.7 Summary	39
	3.8 Appendix A: dyadics in the cartesian system	39
	3.9 Appendix B: Pfaff's differential form	40
	3.10 Problems	41
4	The second law of thermodynamics	45
	4.1 Introduction	45
	4.2 Entropy	46

4.3	The axiomatic statements of the second law	47
4.4	Gibbs' fundamental equation and entropy production	48
4.5	Calculation of entropy changes	53
4.6	Summary and additional remarks	57
4.7	Problems	59
5	Thermal radiation	61
5.1	Introduction	61
5.2	Kirchhoff's law	63
5.3	Blackbody radiation	65
5.4	Entropy of blackbody radiation	68
5.5	Summary and additional remarks	68
5.6	Problems	69
6	Thermodynamic potentials, identities and stability	70
6.1	Basic identities	70
6.2	Characteristic properties of thermodynamic potentials	75
6.3	Equilibrium conditions and thermodynamic stability	77
6.4	Identities of multi-component systems	81
6.5	Summary	85
6.6	Appendix	85
6.7	Problems	86
7	The constitutive equations for irreversible fluxes	88
7.1	Entropy production due to interior heat and mass exchange	88
7.2	Entropy production due to heat, mass and work exchange	95
7.3	Meteorological applications of the theory of irreversible fluxes	101
7.4	Vectorial fluxes in moist air	108
7.5	Appendix	115
7.6	Problems	116
8	State functions of ideal gases	118
8.1	Basic relationships	118
8.2	The ideal gas law for dry air	119
8.3	Dalton's law	121
8.4	Potentials of the ideal gas in the pure phase	122
8.5	Potentials of moist air	126
8.6	Humidity measures	134
8.7	Problems	135
9	State functions of the condensed pure phase	137
9.1	The material coefficients	137

9.2	The thermal equation of state	139
9.3	Potentials of the condensed pure phase	139
9.4	The simplified state functions	142
9.5	Problems	143
10	State functions for cloud air	144
10.1	Specific volume and potentials	145
10.2	Phase changes	148
10.3	Gibbs' phase rule	149
10.4	Clausius–Clapeyron equations	152
10.5	Saturation vapor pressure curve, equilibrium curve for melting	155
10.6	The equilibrium melting pressure	156
10.7	Humidity measures related to chemical equilibrium	157
10.8	Appendix	163
10.9	Problems	163
11	Heat equation and special adiabatic systems	165
11.1	The modified heat equation	165
11.2	The adiabatic heat equation	166
11.3	Thermodynamic filtering of the heat equation	166
11.4	The heat equation of homogeneous systems	168
11.5	The adiabatic heat equation of homogeneous systems	169
11.6	Problems	170
12	Special adiabats of homogeneous systems	171
12.1	Adiabats of an unsaturated system	171
12.2	The equivalent temperature	172
12.3	The reversible moist adiabat	174
12.4	Approximations to the reversible moist adiabat	178
12.5	The irreversible moist adiabat	179
12.6	Construction of the pseudoadiabat on a thermodynamic chart	182
12.7	Dinkelacker's approximation of the moist adiabats	182
12.8	Problems	183
13	Thermodynamic diagrams	184
13.1	General remarks	184
13.2	Energy equivalence	185
13.3	Properties of the diagrams	189

13.4	Graphical computation of the potential equivalent temperature	190
13.5	Problems	191
14	Atmospheric statics	192
14.1	Atmospheric equiscalar surfaces	192
14.2	Gravity field	194
14.3	Integration in equiscalar fields	196
14.4	Homotropy, barotropy, heterotropy and piezotropy	197
14.5	Hydrostatic equilibrium	205
14.6	Polytropic atmospheres	209
14.7	Individual vertical temperature changes	210
14.8	Stability of the hydrostatic equilibrium	212
14.9	Atmospheric energetics of the hydrostatic equilibrium	226
14.10	Problems	233
	<i>Answers to problems</i>	236
	<i>List of frequently used symbols</i>	242
	<i>List of constants</i>	245
	<i>References and bibliography</i>	246
	<i>Index</i>	248
