Turbulence

SECOND EDITION

CONTENTS

Preface to the Second Edition viii
Preface to the First Edition ix

Chapter 1 General Introduction and Concepts 1

1-1 Definition of Turbulence and Introductory Concepts 1
1-2 Equations of Motion for Turbulent Flow; Reynolds Stresses 15
Cylindrical Coordinates 26
1-3 Equation for the Conservation of a Transferable Scalar Quantity in a Turbulent Flow 29
1-4 Double Correlations between Turbulence-Velocity Components 30
1-5 Change in Double Velocity Correlations with Time; Introduction of Triple Velocity Correlations 35
1-6 Features of the Double Longitudinal and Lateral Correlations in a Homogeneous Turbulence 39
1-7 Integral Scale of Turbulence 43
1-8 Other Eulerian Correlations 44
1-9 Turbulent Diffusion of Fluid Particles; Lagrangian Correlations 48
1-10 Recapitulation of Correlations 56
Eulerian Space Correlations 56
Eulerian Time Correlation 57
Lagrangian Time Correlation 57
1-11 Empirical Formulas for Double-Correlation Curves 58
1-12 Taylor's One-dimensional Energy Spectrum 61
1-13 Energy Relations in Turbulent Flows 68

References 79
Nomenclature for Chapter 1 80

Chapter 2 Principles of Methods and Techniques in the Measurement of Turbulent Flows 83

2-1 Introduction 83
2-2 The Hot-Wire Anemometer 85
Effect of Compressibility 91
2-3 Constant-Temperature Method 96
Cooling Effect of the Wire Supports 98
Dynamic Behavior with Heat Loss to Supports 100
Effect of Large Turbulence Fluctuations on the Response of a Hot Wire 105
Effect of Compressibility 111
2-4 Constant-Current Method 113
Effect of Large Turbulence Fluctuations 115
Effect of Nonlinearity Due to Temperature Dependence of Factors 117
2-5 Measurement of Turbulence Characteristics with the Hot-Wire Anemometer 119
Measurement of Turbulence Intensities 123
Measurement of Double and Triple Velocity Correlations 127
Measurement of Spectrum and Scale of Turbulence 131
2-6 Measurement of Temperature and Concentration Fluctuations with the Hot-Wire Anemometer: Constant-Current Method 135
Measurement of Concentration Fluctuations 139
2-7 Limitations of the Hot-Wire Anemometer 139
2-8 Other Turbulence Measuring Probes 144
Thermistor 145
Mechanical Probes 145
Electrical Probes 149
Electrochemical Probe 153
2-9 Methods Based upon Flow Visualization 154
Hydrogen Bubble Technique 155
Light Refraction by Density Variations 159
Methods Based on Scattering and Absorption of Light 160
2-10 Measurement of Mean Values of Static Pressure and Velocity 164
Measurement of Mean Velocity 166
References 168
Nomenclature for Chapter 2 172

Chapter 3 Isotropic Turbulence 175

3-1 Introduction 175
3-2 Correlation Tensors 178
First-Order Correlation Tensor 178
Second-Order Correlation Tensor 181
Third-Order Correlation Tensor 189
3-3 Differential Equation for the Dynamic Behavior of an Isotropic Turbulence 195
3-4 The Three-dimensional Energy Spectrum 202
3-5 The Dynamic Equation for the Energy Spectrum 211
The "Physical Closure" Approximations in the Light of Experimental Evidence 250
3-6 The Decay of an Isotropic Turbulence 259
3-7 Extension to an Isotropic-Turbulent Scalar Field 278
Correlations 278
The Dynamic Equation for $\mathbf{Q}_{\gamma,\gamma}(r,t)$ 282
The Spectral Distribution of a Scalar Quantity 283
The Dynamic Equation for $\mathbf{E}_{\gamma}(k,t)$ 286
The Decay of an Isotropic Scalar Field 300
3-8 Pressure Fluctuations in Isotropic Turbulence 305
3-9 Some Remarks on the Effect of Compressibility 310
References 315
Nomenclature for Chapter 3 319

Chapter 4 Homogeneous, Shear-Flow Turbulence 321

4-1 Introduction 321
Dynamics of the One-Point Velocity Correlation $\overline{u_i u_j}$ 323
Dynamics of the Two-Point Velocity Correlation $\overline{(u_i)_A (u_j)_B}$ 328
Homogeneous Turbulence 331
4-4 The Dynamic Equation for the Energy Spectrum 334
Experimental Results 350
References 356
Nomenclature for Chapter 4 356

Chapter 5 Transport Processes in Turbulent Flows 358

5-1 Introduction 358
5-2 Mixing-Length and Phenomenological Theories 360
5-3 Analogies in Turbulent Transport 376
5-4 Transport by Turbulent Diffusion 384

	Relative Diffusion of Two Fluid Particles	406
	Deformation of a Fluid Element	412
	Relationship Between Eulerian and Lagrangian Correlations	416
5-5	Diffusion from a Fixed Source in a Uniform Flow	427
5-6	Diffusion from a Fixed Source in a Turbulent Shear Flow	451
5-7	Diffusion of Discrete Particles in a Homogeneous Turbulence	460
5-8	Effect of Compressibility	471
	References	477
	Nomenclature for Chapter 5	480

Chapter 6 Free Turbulent Shear Flows **483**

6-1	Introduction	483
6-2	Similarity Considerations	486
6-3	Approximations Applied to the Equations of Motion	489
6-4	Velocity Distribution Behind a Cylinder According to the Classical Theories	496
	Axi-symmetric Wake	502
6-5	The Transport of a Scalar Quantity in the Wake Flow of a Cylinder	503
6-6	Measurements of Mean-Velocity and Mean-Temperature Distribution in the Wake Flow of a Cylinder	505
	Axi-symmetric Wake	509
6-7	Measurements of Turbulence Quantities in the Wake Flow of a Cylinder	510
	Axi-symmetric Wake	519
6-8	Velocity Distribution in a Round Free Jet According to the Classical Theories	520
	Prandtl's Mixing-Length Theory	527
	Reichardt's Inductive Theory	529
6-9	The Transport of a Scalar Quantity in a Round Free Jet	531
6-10	Measurements of Mean-Velocity and Mean-Temperature Distribution in a Round Free Jet	534
6-11	Measurements of Turbulence Quantities in a Round Free Jet	546
6-12	The Structure of Free Turbulent Shear Flow and Transport Processes	558
	References	581
	Nomenclature for Chapter 6	583

Chapter 7 "Wall" Turbulent Shear Flows **586**

7-1 Introduction
7-2 Approximations to the Equations of Motion, and Their 586
Integral Relations for a Plane Boundary Layer 588
Boundary-Layer Approximations 589
Integral Relations 593
7-3 The Laminar Boundary Layer and Transition 597
7-4 Further Considerations on Transition to Turbulence of a Laminar Boundary Layer 600
Mathematical Models 613
7-5 Turbulent Boundary Layer Along a Flat Plate. Classical Theories 614
7-6 Measurements on Mean-Velocity Distribution 626
7-7 Measurements on Turbulence Quantities in a Boundary Layer 638
Effect of Fluid Compressibility 653
7-8 More Detailed Information on the Structure of the Turbulent Boundary Layer 656
Mechanism of the Turbulence in the Wall Region 659
Wall-Pressure Fluctuations 668
Convection Velocities 673
Active and Inactive Motions 680
Dependency Between the Turbulence in the Outer Region and that in the Wall Region 681
7-9 The Structure of the Outer Region 684
7-10 Nonclassical Theories on the Distribution of Mean Properties in a Plane Boundary Layer 690
"Model" Theories 703
7-11 Transition to Turbulence of a Laminar Poiseuille Flow 707
7-12 Turbulent Flow through a Straight Circular Pipe. Mean-velocity Distribution 715
7-13 Measurements of Turbulence Quantities in Pipe Flow 724
7-14 Transport of a Scalar Quantity in Wall Turbulence 742
Effect of Wall Roughness on Heat Transfer 757
Effect of Free-Stream Turbulence on Boundary-Layer Transport 760
References 762
Nomenclature for Chapter 7 769
Appendix—Elements of Cartesian Tensors 771

Name Index 781
