CONTENTS

| | |
|--|-----------|
| PREFACE | vii |
| LIST OF FIGURES | xi |
| JOURNAL ABBREVIATIONS | xiii |
| Chapter 1: Introduction | 1 |
| 1.1 A synopsis | 3 |
| 1.2 Setting the stage | 10 |
| Chapter 2: Early Applications of the Principles of Adiabatic Change and Vertical Convection | 19 |
| 2.1 Introduction | 19 |
| 2.2 Espy's investigations of adiabatic change and his convective theory of storms (1840's) | 22 |
| 2.3 Espy's supporters | 27 |
| a. Early synoptic studies by Loomis (1841–1846) | 27 |
| b. Ferrel's early theoretical studies (1860) | 35 |
| 2.4 Conclusions | 41 |
| Chapter 3: Early Applications of the First Law of Thermodynamics | 45 |
| 3.1 Introduction | 45 |
| 3.2 Adiabatic changes in ascending currents: Thomson (1862), Reye (1864), Peslin (1868) | 46 |
| 3.3 The foehn wind | 58 |
| Chapter 4: Emergence of the Thermal Theory of Cyclones | 63 |
| 4.1 Introduction | 63 |
| 4.2 Empirical synoptic studies | 64 |
| a. The beginnings of weather services and the synoptic chart | 65 |
| b. Buchan's synoptic studies on the role of latent heat (1868) | 71 |
| c. Mohn's empirical thermally asymmetric cyclone model (1870) | 76 |
| 4.3 Early studies of the energetics of storms: Peslin (1868) | 84 |
| 4.4 Reye's quantitative investigations on the role of latent heat in storms (1872) | 88 |
| 4.5 Helmholtz' convective theory of storms (1876) | 96 |
| 4.6 Dynamic cyclone models | 99 |
| a. Guldberg and Mohn—Role of convective current and thermal asymmetry (1876–1880) | 101 |
| b. Ferrel—The thermal wind concept (1878) | 110 |

| | |
|--|-----|
| Chapter 5: The Thermal Theory Put to Observational Test | 119 |
| 5.1 Introduction | 119 |
| 5.2 Synoptic-statistical studies—Favorable evidence | 120 |
| a. Ley (1872) | 120 |
| b. Loomis and others (1870's) | 123 |
| 5.3 Controversial evidence | 125 |
| 5.4 Cloud observations | 128 |
| a. Ley (1872–1877) | 128 |
| b. Hildebrandsson (1870's) | 132 |
| 5.5 Upper level temperature observations (1880's) | 134 |
| 5.6 The American reaction (1890's) | 139 |
| 5.7 The European response (1890's) | 142 |
| | |
| Chapter 6: Modifications of the Thermal Theory | 147 |
| 6.1 Introduction | 147 |
| 6.2 Asymmetric temperature distribution in cyclones | 149 |
| a. Early investigations | 149 |
| b. Köppen and Möller (1880's) | 150 |
| 6.3 V. Bjerknes' circulation theorem (1898) | 159 |
| 6.4 Synoptic studies of horizontal temperature contrasts (Ekholm, Bigelow and Shaw, the 1900's) | 171 |
| 6.5 The tropopause (1900's) | 181 |
| 6.6 Margules' investigations of the energy of storms (1901–1906) | 186 |
| 6.7 Surfaces of discontinuity | 194 |
| | |
| Chapter 7: Toward the Wave or Polar Front Theory of Cyclones | 207 |
| 7.1 Introduction | 207 |
| 7.2 J. Bjerknes' model of the frontal cyclone | 207 |
| 7.3 Concluding remarks | 218 |
| | |
| SELECTED BIBLIOGRAPHY | 221 |
| | |
| APPENDIX: BIOGRAPHICAL SKETCHES | 224 |
| | |
| NAME INDEX | 247 |
| | |
| SUBJECT INDEX | 251 |
