## CONTENTS

Preface . . . . .	v
-------------------	---

### Part One

#### ABSORPTION OF VISIBLE AND INFRARED RADIATION IN THE EARTH'S ATMOSPHERE

1. The earth's atmosphere as an absorbing medium . . . . .	1
1. Composition of the atmosphere, pressure and temperature variations . . . . .	1
2. Water vapor distribution in the atmosphere . . . . .	4
3. Distribution of atmospheric ozone . . . . .	21
4. Distribution of CO <sub>2</sub> , O <sub>2</sub> , CH <sub>4</sub> , N <sub>2</sub> O and CO in the atmosphere . . . . .	22
2. The origin and general description of absorption spectra of atmospheric gases . . . . .	25
1. Molecular energy and spectra . . . . .	25
2. Rotational energy and rotational spectra of molecules . . . . .	27
3. Vibrational energy and vibration-rotation spectra of molecules . . . . .	35
4. Electronic energy and electronic molecular spectra . . . . .	42
5. Shape of spectral lines . . . . .	43
6. Spectral line strength . . . . .	49
7. General characteristics of absorption spectra of atmospheric gases . . . . .	50
3. Absorption of visible and infrared radiation in a homogeneous atmosphere . . . . .	66
1. Basic definitions . . . . .	66
2. Absorption of a single line . . . . .	68
3. Absorption of groups of overlapping lines . . . . .	73
4. Limits of applicability of the Bouguer-Beer law . . . . .	82
5. Fine structure of the vibration-rotation and pure rotational spectrum of water vapor . . . . .	86
6. Absorption function in narrow regions of the vibration-rotation and pure rotational water vapor spectrum . . . . .	104
7. Fine structure of the absorption spectrum of carbon dioxide . . . . .	114
8. Absorption functions in different regions of the CO <sub>2</sub> spectrum . . . . .	117
9. Fine structure and absorption functions in the ozone spectrum . . . . .	120
10. Fine structure and absorption functions of the oxygen spectrum . . . . .	122
11. Fine structure and absorption functions of spectra of minor atmospheric constituents . . . . .	122

12. Absorption of overlapping lines and bands. . . . .	126
13. Absorption of radiation from selective sources . . . . .	128
14. Absorption of laser radiation in the atmosphere . . . . .	130
<b>4. Absorption of visible and infrared radiation in an inhomogeneous atmosphere . . . . .</b>	<b>146</b>
1. Spectral transmission (absorption). Transmission (absorption) function . . . . .	146
2. Direct computation of spectral transmission and the transmission function . . . . .	147
3. Appropriate computation of absorption function $H$ . . . . .	150
4. Approximate allowance for temperature in computation of function $H$ . . . . .	154
5. Approximate determination of the spectral transmission of an inhomogeneous atmosphere . . . . .	155
6. Computation of the absorption function with allowance for the earth's curvature . . . . .	156
7. Experimental study of absorption function $H$ . . . . .	159
8. Absorption of laser radiation in an inhomogeneous atmosphere . . . . .	165

## Part Two

### SCATTERING OF VISIBLE AND INFRARED RADIATION IN THE EARTH'S ATMOSPHERE

<b>5. The earth's atmosphere as a scattering medium . . . . .</b>	<b>168</b>
1. Cloud and fog . . . . .	168
2. Haze . . . . .	177
3. Precipitation . . . . .	187
<b>6. Scattering of visible and infrared radiation by a single particle . . . . .</b>	<b>189</b>
1. Representation of polarized light . . . . .	189
2. Scattering of a plane monochromatic wave . . . . .	191
3. Coefficients of scattering, absorption and extinction . . . . .	193
4. Scalar approximation in the light-scattering problem . . . . .	195
5. Scattering of an inhomogeneous field . . . . .	199
6. Scattering of visible and infrared radiation by a single spherical particle . . . . .	204
7. Scattering of light by nonspherical particles . . . . .	221
<b>7. Scattering of visible and infrared radiation in the atmosphere . . . . .</b>	<b>223</b>
1. Molecular scattering of visible and infrared radiation . . . . .	224
2. Scattering of waves by a system of particles . . . . .	225
3. Investigation of the scattering matrix . . . . .	228
4. Energy characteristics of scattering of visible and infrared radiation by clouds and fog . . . . .	229
5. Energy characteristics of scattering of visible and infrared radiation by haze . . . . .	246

## *Part One*

### *ABSORPTION AND RADIATION*

#### *1. THE ABSORPTION*

6. Energy characteristics of scattering of visible and infrared radiation by precipitation . . . . .	262
7. Scattering diagrams of polydisperse aerosols . . . . .	263
8. Scattering of laser radiation in the atmosphere . . . . .	266
9. Effect of measuring apparatus on experimental results in scattering of visible and infrared radiation in the atmosphere . . . . .	269

### **Part Three**

#### **PROPAGATION OF TIGHT LIGHT BEAMS IN THE ATMOSPHERE**

<b>8. Radiation from various types of lasers</b> . . . . .	276
Introduction . . . . .	276
1. Solid crystalline lasers . . . . .	276
2. Glass lasers . . . . .	279
3. Gas lasers . . . . .	280
4. Semiconductor lasers . . . . .	282
5. Variation in laser radiation parameters due to various causes . . . . .	283
<b>9. Propagation of tight light beams in atmospheric aerosols</b> . . . . .	286
1. Brightness of forward-scattered radiation . . . . .	286
2. Extinction of direct radiation in scattering media. Limits of applicability of the Bouguer law . . . . .	301
3. Brightness of back-scattered radiation . . . . .	304
4. Polarization characteristics of scattered radiation . . . . .	307
5. Propagation of a pulse of directed radiation in a scattering and absorbing medium . . . . .	310
<b>10. Nonlinear effects in the propagation of high-power light radiation in the atmosphere</b> . . . . .	320
1. Probability of multiple-photon processes . . . . .	320
2. Computation of the transition probability by successive approximations . . . . .	323
3. Estimates for the probability of multiple-photon photoionization and photodissociation . . . . .	325
4. Spectroscopic saturation effect . . . . .	332
5. Absorption of light with allowance for saturation effects . . . . .	335
6. Self-focusing of a laser beam . . . . .	336
7. Action of a high-power radiation field on atmospheric aerosol particles . . . . .	338
<b>11. Propagation of tight light beams in a turbulent atmosphere</b> . . . . .	348
1. General remarks . . . . .	349
2. Theoretical studies of fluctuations in the parameters of tight beams propagating in the atmosphere . . . . .	351

3. Experimental studies of fluctuations in the parameters of tight beams propagating in a turbulent atmosphere . . . . .	356
Appendix 1 . . . . .	368
Appendix 2 . . . . .	371
Bibliography . . . . .	376
Index . . . . .	403
