Solar and Terrestrial Radiation

METHODS AND MEASUREMENTS

Kinsell L. Coulson

Department of Meteorology
University of California
Davis, California

ACADEMIC PRESS New York San Francisco London 1975

A Subsidiary of Harcourt Brace Jovanovich, Publishers

Contents

Preface ix

Chapter One

Principles of Radiation Instruments

1.1	Definitions, Terminology, and Units	1
1.2	Radiation Laws	7
1.3	Milestones in Radiation Research	11
	<i>References</i>	20

Chapter Two

Radiation Sensors and Sources

2.1	Radiation Sensors	22
2.2	Radiation Sources	30
	<i>References</i>	37

Chapter Three

Solar Radiation: Direct Component

3.1	Transmission by Atmosphere	40
3.2	Measurement of the Direct Component: Pyrheliometers	53

3.3	Collimator Tubes for Pyrheliometers	77
3.4	Calibration of Pyrheliometers	79
	<i>References</i>	81

Chapter Four

Solar Radiation: Diffuse Component

4.1	Skylight Intensity and Distribution	86
4.2	Measurement of Diffuse and Global Radiation	94
	<i>References</i>	137

Chapter Five

Ultraviolet Radiation from the Sun and Sky

5.1	The Solar Ultraviolet	142
5.2	The Measurement of Ultraviolet Radiation	150
	<i>References</i>	159

Chapter Six

Illumination

6.1	Definitions and Units	162
6.2	Measurement of Photometric Quantities	166
6.3	Measurements of Natural Illumination	174
	<i>References</i>	177

Chapter Seven

Polarization of Light in the Atmosphere

7.1	Introduction	178
7.2	Polarization of Radiation	180

7.3	Theoretical Determinations of Polarization	181
7.4	Measurements of Skylight Polarization	197
7.5	Instruments for Measuring Polarization	200
	<i>References</i>	210

Chapter Eight

Duration of Sunshine

8.1	Usefulness of Measurements of Sunshine Duration	215
8.2	Early Development of Sunshine Recorders	217
8.3	Modern Sunshine Recorders	222
8.4	Installation of Sunshine Recorders	227
8.5	Correlation between Sunshine Duration and Global Radiation	229
	<i>References</i>	233

Chapter Nine

The Solar Constant

9.1	Determinations of the Solar Constant	236
9.2	Variability of Solar Radiation	242
	<i>References</i>	246

Chapter Ten

Terrestrial Radiation: Field Characteristics

10.1	General	250
10.2	Equation of Radiative Transfer	253
10.3	Radiative Heating and Cooling	256
10.4	Models of Absorption Lines and Bands	257
10.5	The Curtis–Godson Approximation	262
10.6	Absorption Spectra of Atmospheric Gases	264
10.7	Computations of Fluxes and Heating Rates	269
	<i>References</i>	276

Chapter Eleven***Terrestrial Radiation: Methods of Measurement***

11.1	Measurement of Long-Wave Radiation	279
11.2	Early Types of Long-Wave Radiometers	282
11.3	Important Modern Radiometers	285
11.4	Calibration of Pyrradiometers and Net Pyrradiometers	302
	<i>References</i>	305
	<i>Appendix A List of Symbols</i>	308
	<i>Appendix B</i>	312
	<i>Appendix C</i>	313
	Index	319
