1	Some Basic Relations	1
1.1	Natural Parameters and Observables	1
1.2	Propagation of Electromagnetic Waves	9
1.3	Waves at Boundaries Between Different Media	22
2	Spectral Lines of Atmospheric Gases	33
2.1	Resonant Frequencies of Molecules	33
2.2	Widths of Spectral Lines	47
2.3	Applications to the Earth's Atmosphere	52
3	Spectral Properties of Condensed Matter	64
3.1	Elementary Theory of Organic Dyes	64
3.2	Chlorophyll and Spectral Properties of Plants	78
3.3	Polarization of the Media and Dispersion of Radiation	83
4	Scattering of Radiation	98
4.1	Light Scattering by Molecules	98
4.2	Scattering of Radiation by Macroscopic Particles	106
4.3	Backscattering from Rough Surfaces	120
5	Transport of Radiation	136
5.1	The Equation of Radiative Transfer	136
5.2	Kirchhoff's Law and Radiometry	143
5.3	Radiometric Observation of Atmospheric Parameters and the Inversion of Remotely Sensed Data	157
	References	176
	Subject Index	181
