COMPUTATION OF SOLAR RADIATION CHARACTERISTICS

(Metody rascheta kharakteristik solnechnoi radiatsii)

Gidrometeorologicheskoe Izdatel'stvo
Leningrad 1968

Translated from Russian

Israel Program for Scientific Translations
Jerusalem 1971

Table of Contents

Introduction	1
§ 1. Application of computation methods in actinometry.....	1
§ 2. The basic characteristics of the radiation regime.....	3
§ 3. Statement of the problem	6

Part I

ATTENUATION OF SOLAR RADIATION IN THE ATMOSPHERE

Chapter 1. THE GENERAL LAW OF ATTENUATION OF SOLAR RADIATION IN THE ATMOSPHERE	11
§ 4. Physical process responsible for the attenuation of radiation in the atmosphere	11
§ 5. The Bouguer—Lambert law.....	14
Chapter 2. THE SOLAR CONSTANT	16
§ 6. Spectral distribution of the radiation intensity outside the atmosphere and the solar constant	16
Chapter 3. ABSORPTION AND SCATTERING OF RADIATION IN THE ATMOSPHERE	21
§ 7. The path of solar rays in the atmosphere	21
§ 8. Absorption of solar radiation in the atmosphere	30
§ 9. Scattering of solar radiation	40
§ 10. Complex characteristics of atmospheric transmission	44

Part II

CALCULATION OF RADIATION CHARACTERISTICS IN A CLOUDLESS ATMOSPHERE

Chapter 4. CALCULATION OF RADIATION INTENSITY IN AN IDEAL ATMOSPHERE	48
§ 11. The method of calculation and the choice of starting numerical values of the parameters	48
§ 12. Principal features of radiation extinction in an ideal atmosphere.....	53
§ 13. Scattered and total radiation in an ideal atmosphere	62

Chapter 5.	CALCULATION OF THE RADIATION INTENSITY IN A REAL ATMOSPHERE FROM OPTICAL DENSITY AND LIQUID WATER CONTENT	66
§ 14.	General principles for the calculation of the radiation characteristics of a real atmosphere	66
§ 15.	Extinction of direct radiation by solid and liquid particles of atmospheric aerosols	67
§ 16.	Absorption by water vapor	69
§ 17.	Some results of the calculation of the intensity of direct radiation in the real atmosphere	73
§ 18.	Calculations of scattered and total radiation	76
Chapter 6.	CALCULATION OF RADIATION INTENSITY FROM MEASUREMENT DATA	79
§ 19.	Generalization of observation results	79
§ 20.	Empirical and semiempirical formulas for the daily variation of the intensity of the direct solar radiation	85
§ 21.	The meteorological solar constant	89
§ 22.	Results of investigation of empirical and semiempirical equations	96
§ 23.	Daily variation of the intensity of scattered and total radiation	99
§ 24.	The normal daily variation of the intensity of direct, scattered, and total radiation	105
Chapter 7.	DAILY RADIATION TOTALS IN THE CLOUDLESS CASE	109
§ 25.	The possible radiation totals	109
§ 26.	Empirical methods of the determination of the possible radiation totals	110
§ 27.	General principles of the theoretical computation of the possible radiation totals	114
§ 28.	Computation of the possible totals of direct radiation from the transmission coefficient	116
§ 29.	The effective transmission coefficient of the atmosphere	117
§ 30.	An analytical method of computation of the possible totals of direct radiation using Kastrow's equation	122
§ 31.	Computation of the possible totals of scattered and total radiation	132
Chapter 8.	COMPUTATION OF THE TRANSPARENCY CHARACTERISTICS OF THE ATMOSPHERE	133
§ 32.	The choice of different transparency characteristics	133
§ 33.	The transmission coefficient and other transparency characteristics	133
§ 34.	Radiation intensity as a primary characteristic of atmospheric transparency	137
§ 35.	Linke's turbidity factor	141
§ 36.	Makhotkin's turbidity index	146
§ 37.	Myurk's transparency index	148

Part III
CALCULATION OF RADIATION CHARACTERISTICS IN A
CLOUDY ATMOSPHERE

Chapter 9. THE EFFECT OF CLOUDINESS ON SHORT-WAVE RADIATION FLUXES	150
§38. Solar radiation transfer in clouds	150
§39. Meteorological cloud characteristics	152
§40. General principles of allowing for the effect of cloudiness	154
Chapter 10. CALCULATION OF RADIATION CHARACTERISTICS FROM VISUAL CLOUDINESS ESTIMATES	156
§41. Calculation from total cloudiness	156
§42. Combined methods of computation using visual cloudiness estimates	159
Chapter 11. THE EFFECT OF CLOUDINESS ON THE DURATION OF SUNSHINE	163
§43. Computation of radiation characteristics from the relative duration of sunshine	163
§44. Computation of radiation characteristics from the absolute duration of sunshine	166
Appendix I	170
Appendix II	171
Bibliography	172
