Amsterdam - Oxford - New York 1976

Contents

Preface	V
Acknowledgements	VI
Various conversions and constants	XIII
List of principal symbols.	XIV
CHAPTER 1. THE GLOBAL PICTURE.	1
1. Introduction	1
2. Basic models	5
3. Temperatures, cloud cover and solar constant	11
4. Time constants	14
5. Mean meridional cross-sections	14
6. Cloud and radiation loss	18
7. Radiative cooling rates and global dynamics	20
8. Satellite observations and longitudinal asymmetries	26
9. Global dynamics as a passive variable	32
CHAPTER 2. TERMINOLOGY, BASIC LAWS, AND STANDARDS.	35
1. Field quantities	35
1.1. Monochromatic terminology	38
2. Absorption, reflection and transmission	38
3. Scattering.	40
4. Thermal emission.	42
5. Meteorological radiation quantities.	47
6. Standards.	49
CHAPTER 3. THE SUN	53
1. Radiant output	53
2. Long-term variations.	57
3. Position terminology and formulae	60
4. Zenith angle and air mass.	64
5. 24-hour totals of radiation input.	66
CHAPTER 4. RADIATIVE TRANSFER.	69
1. Introduction	69
2. The transfer equation	69
2.1. The general case	71
2.2. Approximate solutions for operational models	73
3. Mie scatter	77

4. Numerical solutions	83
4.1. Monte Carlo method	83
4.2. The adding method	85
CHAPTER 5. SOLAR RADIATION WITHIN THE ATMOSPHERE	89
1. Introduction	89
2. Ozone absorption.	91
3. Water vapour absorption in clear skies	94
4. The effect of cloud.	98
4.1. Liquid water absorption	103
5. Rayleigh scatter.	105
CHAPTER 6. RADIATION AT THE GROUND	113
1. Introduction	113
2. Solar direct beam.	116
2.1. Rayleigh scatter	119
2.2. Ozone and water vapour absorption	121
2.3. The effect of atmospheric dust.	122
3. Diffuse radiation in clear skies	125
4. Radiation on a tilted surface	127
5. Radiative properties of the surface	128
5.1. Surface albedo	129
5.2. Surface emissivity	134
6. Parameterized components of net radiation at the ground	136
7. Radiation in the ocean	140
CHAPTER 7. LONG-WAVE RADIATION TRANSFER IN THE CLEAR ATMOSPHERE	143
1. Introduction	143
2. Distribution and nature of atmospheric absorption.	143
3. The equation of radiative transfer	147
4. The equation for vertical flux density	149
5. Transmittance modelling	152
5.1. Absorption by a single line	152
5.2. Absorption over a band	154
5.3. Empirical transmittance models and generalized absorption coefficients	158
5.4. Direct integration transmittance models.	160
5.5. Water vapour continuum.	161
6. Radiative cooling models for the troposphere and lower stratosphere.	164
6.1. Multispectral, two-parameter model	165
6.2. The emissivity approximation	173
6.3. Comparisons of model calculations.	179
6.4. Empirical relation between cooling and local temperature.	185
7. Radiative cooling in the middle atmosphere (30–100 km)	187
CHAPTER 8. CLOUDS AND LONG-WAVE TRANSFER.	191
1. Introduction	191
2. Water droplet and ice crystal infrared parameters.	194
3. The absorption approximation	197

CONTENTS

XI

4. "Standard" clouds	199
5. Emissivities of clouds	202
6. Effects of clouds on atmospheric cooling	207
7. Comparison of atmospheric cooling in clear skies and in a cloudy atmosphere	213
CHAPTER 9. ATMOSPHERIC AEROSOLS	215
1. Introduction	215
2. The extinction of short-wave solar radiation	216
3. Absorption of short-wave radiation	222
4. Atmospheric turbidity	225
5. Extinction of infrared long-wave radiation	226
5.1. Calculation of extinction coefficients	226
5.2. Examples of extinction coefficients for specific distributions.	230
5.3. Infrared cooling by atmospheric aerosols	233
6. The effect of an increase in atmospheric aerosols on climate.	234
CHAPTER 10. RADIATION AND GENERAL DYNAMICS	243
1. The mean temperature profile of the atmosphere	243
1.1. Introduction.	243
1.2. Radiative equilibrium and the stratosphere.	245
1.3. Radiative-convective equilibrium and the troposphere	248
2. Radiation in the troposphere	252
2.1. Radiative cooling and profile curvature	252
2.2. Calculation of flux divergence of thin layers	254
2.3. Radiation and atmospheric inversions	257
3. Radiation within the boundary layer	259
3.1. Nocturnal cooling and ground fog.	262
4. Radiation and the meteorology of cloud.	265
4.1. Introduction.	265
4.2. Static energy loss, latent heat and the rate of displacement	270
4.3. Stratocumulus	273
4.4. Cirrus	275
APPENDIX	279
1. Aerosol size distributions.	279
2. Particle growth with humidity	282
3. Aerosol refractive indices.	287
3.1. Short-wave (solar) region	287
3.2. Infrared region	289
4. Cloud droplet size distributions	296
References	301
Index	315
