## PART I

<b>SNOW AND THE ENVIRONMENT</b>	<b>1</b>
<b>1 SNOW AND LIVING THINGS</b>	<b>3</b>
<b>Section 1: SNOW AND MAN - G.A. McKAY;</b>	
<b>Section 2: SNOW: PLANTS AND ANIMALS - W.P. ADAMS</b>	
<b>Snow and Man</b>	<b>3</b>
Adapting to Snow	4
Vulnerability	6
Construction	10
Transportation	11
Resource use	13
<b>Snow: Plants and Animals</b>	<b>13</b>
Falling, Blowing and Intercepted Snow	14
Snowcover	16
Acknowledgements	26
References	27
<b>2 SNOW AND CLIMATE - M.O. BERRY</b>	<b>32</b>
Effects of Snowcover on the Atmosphere	32
Energy budget	32
Air mass formation and weather systems	36
Global climate	38
Effects of snowcover on other weather elements	40
Snowcover and the Layer Below	47
Thermal regime of the ground	48
Frost and permafrost	56
Literature Cited	58
<b>3 SNOW AND AGRICULTURE - H. STEPPUHN</b>	<b>60</b>
Snow and Irrigation	60
Snow, a source of irrigation water	60
Irrigation water supply forecasting	62

Snow and irrigation in various climatic regions	67
The value of irrigation	69
Snow and water quality	70
Snow and Floods	74
Snow and Dryland Crops	75
Water requirements	75
Summerfallow soil water from snow	79
Water from snow for dryland crops	81
Snow management in dryland areas	83
Snow management practices	87
Snow and the Crop Environment	99
Heat transfer	100
Soil temperature	101
Snow and crop survival	107
Snow and Livestock	111
Snowstorms and livestock on pasture and range	111
Livestock shelters and feedlots	112
Snow and Mechanical Damage	113
Literature Cited	116

## PART II

### SNOWFALL AND SNOWCOVER 127

<b>4 SNOWFALL FORMATION - R.S. SCHEMENAUER, M.O. BERRY and J.B. MAXWELL</b>	129
Introduction	129
General Principles of the Meteorology of Precipitation	130
Moisture sources	130
Atmospheric moisture distribution	130
Vertical motion	131
Synoptic weather systems	133
Topographic and orographic factors	134
Cloud and precipitation patterns	134
The Formation of Snow	136
Ice nucleation	137
Growth of crystals by vapor deposition	138
Riming of snow crystals	139
Aggregation of snow crystals	142
Artificial modification of snowfall	142
Physical Characteristics of Snow Crystals	143

Classification of snow crystals	143
Sizes, masses, densities, terminal velocities and concentration of snow crystals	144
Physical Characteristics of Snowflakes	146
Role of Snow in the Removal of Particulate Matter from the Atmosphere	146
Areal Distribution of Snowfall	147
Relationship between atmospheric processes and occurrence of snow	147
Effects of moisture and precipitation mechanisms on snowfall distribution	149
Literature Cited	151
<b>5 THE DISTRIBUTION OF SNOWCOVER - G.A. McKAY and D.M. GRAY</b>	<b>153</b>
Introduction	153
Factors Controlling Snowcover Distribution and Characteristics	154
Temperature	154
Wind	154
Energy and moisture transfer	159
Physiography	160
Vegetative cover	165
Snowcover Patterns	168
Global	168
Zonal	173
Simulation and Synthesis	182
Physical models	183
Mathematical, empirical and other approaches	183
Literature Cited	187
<b>6 MEASUREMENT AND DATA ANALYSIS - B.E. GOODISON, H.L. FERGUSON and G.A. McKAY</b>	<b>191</b>
Introduction	191
Point Snowfall Measurement	192
Snow ruler, snow boards	192
Limited capacity, non-recording snow gauges	192
Weighing-type precipitation gauges	195
Precipitation storage gauges	198
Visibility attenuation	199
Telemetry of point precipitation measurements	199

Comparison of Point Snowfall Measurement	
Techniques	200
Limitation of ruler measurements	200
Comparison of snow gauge measurements	203
Effect of wind on gauge catch	205
Areal Measurement of Snowfall	210
Precipitation network design	212
Point Measurements of Snowcover Depth	214
Measurement of Snow Water Equivalent	215
Gravimetric measurement	215
Snow pillows	215
Radioisotope snow gauges	217
Natural gamma radiation: terrestrial survey	219
Snow Surveying	220
Purpose of snow surveys	220
Snow course selection and network design	220
Snow survey measurement techniques	225
Comparison of Ground Based Snowcover Measurement	
Techniques	233
Remote Sensing of Snowcover	235
Aerial markers, snowline flights, aerial surveys	237
Natural gamma radiation: airborne survey	238
Microwave sensing of snowcover from aircraft	239
Satellite observations of snowcover	240
Data Analysis	243
Data sources	243
Data quality	245
Consistency	245
Errors	247
Representativeness of measurement area	248
Frequency distributions	248
Variability in time	252
Areal variability	254
Estimation	259
Design values	260
Presentation of data	261
Literature Cited	265
<b>7 PHYSICS AND PROPERTIES OF SNOWCOVER -</b>	
<b>E.J. LANGHAM</b>	275
Physics	275
Snow deposition	275

Evolution of the snowcover	277
The role of free energy in the metamorphism of snow	278
Classification of the Crystalline Nature of the Snowpack	285
Properties of Dry Snow	293
Metamorphism and bulk properties	293
Thermal properties	294
Mechanical properties	299
Frictional properties	307
Constitutive equations for snow and the prediction of failure	312
Electrical, electromagnetic and optical properties	314
Properties of Wet Snow	324
Effects of liquid water in the snowpack	324
Thermal, mechanical and electrical properties	326
Contamination of the Snowpack	327
Literature Cited	329
<b>8 SNOW DRIFTING - R.J. KIND</b>	<b>338</b>
Introduction	338
Characteristics of the Wind Near the Earth's Surface	339
Basic wind structure	339
Wind structure near surface features	341
Relationships Between Wind and Snow Movement	343
Threshold conditions	343
Modes of transport of blowing snow	345
Wind velocity profiles in blowing-snow conditions	347
Rate of transport of snow by wind	350
Snowdrift formation	353
Principles of drift-control devices	354
Model Simulation of Snow Drifting	355
Literature Cited	358
<b>9 SNOWCOVER ABLATION AND RUNOFF - D.H. MALE and D.M. GRAY</b>	<b>360</b>
Introduction	360
Physics of Snowmelt	361
General considerations	361
Short-wave (solar) radiation	364
Long-wave radiation	381
Convective and latent energy exchanges	385
Internal energy	393

Ground heat flux	395
Rain on snow	397
Water movement through snow	398
Soil Infiltration and Water Transmission	407
Operational Procedures for Estimating Snowcover	
Runoff – Some Common Practices	416
Introduction	416
Snowmelt and transmission through the snowcover	417
Time distribution of runoff	424
Literature Cited	430
<b>10 SNOW AND ICE ON LAKES - W.P. ADAMS</b>	<b>437</b>
Introduction	437
Components of the Winter Cover of Lakes	438
Columnar (black) ice	438
Lake snowcover	439
Granular types of lake ice	445
Roles of snow and white ice in sheet development	448
Effects of Snow and Ice Cover on Exchange Processes to a Lake and on its Biological Activity	451
Energy exchange	451
Gas and mass exchange	453
Variability of Ice Sheet Strength	455
Roles of Lake Snow and Ice in the Hydrological Cycle	459
Measurement of Snow and Ice on Lakes	461
Acknowledgements	465
Literature Cited	466
<b>11 AVALANCHES - P.A. SCHAEERER</b>	<b>475</b>
Introduction	475
The Start of Avalanches	478
Effect of metamorphism on snowpack properties	478
Snow strength	479
Snow creep	481
Failure of snow slopes	482
Starting zone	485
Summary of conditions and their effects on avalanche formation	485
Movement of Avalanches	486
Nature of motion	486
Powder, dry-flowing, wet-flowing and mixed avalanches	489

Speed	492
Impact pressures	494
Runout distance	495
Classification of Avalanches	495
Morphological	496
Genetic	497
Classification by magnitude	497
Avalanche Hazards	497
Survival chances	498
Identification of avalanche hazards	499
Evaluating the daily hazard	500
Methods of Protection and Control	503
Objectives	503
Location of structures	504
Modification of terrain	506
Supporting structures	506
Snow fences and wind baffles	508
Deflectors	508
Retarding works	512
Protection by forests	512
Use of explosives	513
Other types of snowcover modification	514
Safety measures	515
Literature Cited	516

### PART III

## SNOW AND ENGINEERING 519

<b>12 TRAVEL OVER SNOW - K.M. ADAM</b>	<b>521</b>
Introduction	521
Oversnow Vehicles	523
Development of oversnow vehicles	523
Environmental effects of oversnow vehicles	539
Winter Roads	541
Types	541
Required properties for trafficability	542
Construction techniques	545
Cost of winter road construction	556
Ice Bridges	556
Environmental Effects of Snow Roads	558
Literature Cited	559

<b>13 SNOW AND BUILDINGS - D.W. BOYD, W.R. SCHRIEVER and D.A. TAYLOR</b>	<b>562</b>
Introduction	562
Snow Load on the Ground	563
Development of loads for the National Building Code	563
Effect of elevation	565
Urban effect and climatic change	566
Snow on Roofs	566
Snow load surveys	568
The structure and density of snow on roofs	568
Effects of wind on snow accumulation	568
Solar radiation and heat loss	570
Roof slope and texture	570
Redistribution due to sliding and melting snow	571
Snow removal	572
Basic roof load	572
Drift loads	573
Literature Cited	578
<b>14 CHEMICALS AND ABRASIVES FOR SNOW AND ICE CONTROL - J. HODE KEYSER</b>	<b>580</b>
Introduction	580
Properties of De-icing Chemicals	581
Sodium chloride and calcium chloride	583
Sodium chloride and calcium chloride mixtures	587
Abrasives	589
Factors Influencing the Melting Rate of Snow and Ice	590
Physical characteristics of snow and ice	590
Type of chemical	592
State of the de-icing chemical	594
Concentration of salt	595
Time of solution	597
Temperature	599
Radiation, wind and humidity	599
Type of road surface	600
Topography	601
Traffic	601
Width and time of application	601
Combined effects	602
Efficient Snow and Ice Control Using Chemicals	603
Rate of application of de-icing chemicals	604
Side Effects of De-icing Chemicals	605

Environmental	605
Effects of salt on concrete, bridge decks and automobiles	607
Inhibitors	609
Literature Cited	609
<b>15 THERMAL METHODS OF CONTROL - G.P. WILLIAMS</b>	<b>613</b>
Introduction	613
Heated Pavements	613
Heat requirements	613
Design heat loads	617
Electrical systems	621
Pipe systems	622
Infrared systems	623
Mobile Snow Melters	624
General characteristics	624
Types	624
Operation	625
Stationary Snow Melters	625
General characteristics	625
Cost factors	626
Special Snow Melting Systems	627
Alternative sources of heat	627
Special applications	628
Literature Cited	628
<b>16 DRIFT CONTROL - R.W. VERGE and G.P. WILLIAMS</b>	<b>630</b>
Introduction	630
Basic Principles	630
Drift Control by Design and Layout of Structures	632
Snow Drift Control with Shelter Belts	635
Snow Fences	636
General considerations	636
Fence height	640
Design and location	642
Special types	644
Other considerations	644
Literature Cited	647
<b>17 SNOW REMOVAL EQUIPMENT - L.D. MINSK</b>	<b>648</b>
Introduction	648
Types of Equipment	648

Blade or displacement plows	650
Rotary plows ("snowblowers")	653
Power brooms	653
Hybrid machines	655
Operating Principles	656
Displacement (blade) plows	656
Rotary plows	661
Impellers	662
Cutters	663
Capacity	664
Plow Carriers	665
Applications	666
Equipment Evaluation	668
Literature Cited	669
<b>18 APPLICATIONS OF REMOVAL AND CONTROL METHODS</b>	<b>671</b>
<b>Section 1: RAILWAYS - L.D. MINSK;</b>	
<b>Section 2: HIGHWAYS - D.R. BROHM and S. COHEN;</b>	
<b>Section 3: AIRPORTS - L.M.E. HAWKINS</b>	
<b>Railways</b>	671
Historical Development	671
Requirements and Control Methods	672
Mainline	672
Yards and terminals	673
Switches	674
Grade crossings	676
Tunnels and snow sheds	676
Mechanized Equipment	677
On-track	677
Off-track	680
<b>Highways</b>	681
Historical Challenges	681
Traction Considerations	683
Snow tires and studded tires	684
Tire chains and other removable devices	685
Other methods	686
Radial ply tires	686
Summary	686
Management of Snow Removal and Ice Control	687
Performance return from highway service level	689
Snow removal and ice control guide	692

Pre-season preparation	693
Special Considerations	696
Snow removal and ice control on large bridges	696
Snow control at complex interchanges	696
White-out: highway hazard	697
Acknowledgements	698
<b>Airports</b>	698
Requirements, Priorities, Standards	698
Use and Description of Snow and Ice Control Measures	701
Abrasives	702
Application of Snow and Ice Control Equipment	703
Literature Cited	705

## PART IV

### SNOW AND RECREATION 707

<b>19 SKIING - R. PERLA and B. GLENNE</b>	709
Introduction	709
Snow Parameters	711
Skiing and Snow Metamorphism	714
Special Surface Conditions	718
Compaction	719
Low Friction of Ice and Snow	721
Resistance to Ski Movement	723
Ski Wax	727
Downhill wax	728
Glider wax	728
Cross-country wax	729
Klister	730
Base wax	730
Skiing Dynamics	732
Future Developments	735
Literature Cited	736
<b>20 MECHANICS OF SKIS - B. GLENNE</b>	741
Introduction	741
Ski History	741
Ski Performance and Ski Properties	744

Modes of Construction	748
Geometric Features	750
Elastic Properties	754
Dynamic Properties	762
Future Developments	763
Literature Cited	764

<b>INDEX</b>	767
