CONTENTS

1. THE FORMATION OF CLOUDS AND PRECIPITATION, 3

- 1.1 Introduction, 3
- 1.2 How air may become saturated, 3
 - 1.2.1 Diabatic cooling, 3
 - 1.2.2 Mixing, 4
 - 1.2.3 Adiabatic cooling, 4
- 1.3 The formation of cloud particles, 6
- 1.4 The formation of precipitation, 7
 - 1.4.1 The coalescence mechanism, 7
 - 1.4.2 The ice crystal mechanism, 8
- 1.5 Modification of precipitation processes, 9
- 1.6 Classification of microphysical processes, 10
 - Problems, 11
 - References, 12

2. THE STRUCTURE OF WATER AND ICE, 13

- 2.1 Introduction, 13
- 2.2 The water molecule, 13
- 2.3 The structure and form of ice, 14
 - 2.3.1 The crystal structure, 15
 - 2.3.2 The crystal shape, 17
- 2.4 The structure of liquid water, 19
- 2.5 The water, ice, and air interfaces, 19
 - Problems, 21
 - References, 22

3. NUCLEATION OF THE LIQUID PHASE, 23

- 3.1 Introduction, 23
- 3.2 Homogeneous condensation, 23
 - 3.2.1 Saturation vapor pressure over a droplet, 23
 - 3.2.2 Homogeneous nucleation rate, 31
- 3.3 Condensation on insoluble nuclei, 42
 - 3.3.1 Condensation on an insoluble plane surface, 42
 - 3.3.2 Condensation on insoluble nuclei, 46
- 3.4 Condensation on soluble nuclei, 48
 - 3.4.1 Expression of the thermodynamic potential, 49
 - 3.4.2 Raoult's law, 50
 - 3.4.3 The equilibrium vapor pressure for solution drops, 51
 - 3.4.4 Examination of Köhler curves, 53
 - 3.4.5 The nature and origin of CCN, 57
- Problems, 62
- References, 63

4. NUCLEATION OF THE ICE PHASE, 65

- 4.1 Introduction, 65
- 4.2 Deposition nucleation, 67
 - 4.2.1 The thermodynamic potential, 69
 - 4.2.2 The nucleation rate, 70
 - 4.2.3 Deposition nucleation behavior, 71
- 4.3 Homogeneous freezing nucleation, 71
 - 4.3.1 The nucleation rate, 73
 - 4.3.2 Comparison between theory and observation, 76
- 4.4 Immersion freezing nucleation, 78
 - 4.4.1 The nucleation rate, 78
 - 4.4.2 Immersion freezing nucleation behavior, 80
- 4.5 Contact freezing nucleation, 81
 - 4.5.1 The nucleation probability, 82
 - 4.5.2 Nucleus collection rates, 83
 - 4.5.3 Evidence for contact freezing nucleation in clouds, 89
- 4.6 Condensation freezing nucleation, 89
 - 4.6.1 Condensation followed by immersion freezing, 89

- 4.6.2 Condensation followed by contact freezing, 91
- 4.6.3 Condensation freezing nucleation behavior, 93
- 4.7 Relationships between modes of ice nucleation, 95
- 4.8 Secondary ice production, 97
 - 4.8.1 The Hallett–Mossop mechanism, 97
 - 4.8.2 Evidence for secondary ice production, 98
- 4.9 The behavior of ice nuclei in nature, 99
 - 4.9.1 Sources of natural ice nuclei, 99
 - 4.9.2 The active sites concept and pre-activation, 100
 - 4.9.3 Other sources of ice crystals in clouds, 102
 - 4.9.4 Laboratory characterization of ice nuclei, 103
- Problems, 106
- References, 107

5. DIFFUSION GROWTH OF WATER DROPS, 111

- 5.1 Introduction, 111
- 5.2 The equations governing drop growth by diffusion, 111
 - 5.2.1 The mass flux equation, 112
 - 5.2.2 The sensible heat flux equation, 113
 - 5.2.3 The particle wet-bulb, 114
 - 5.2.4 The combined growth equation, 115
- 5.3 Competition and the meaning of infinity, 117
 - 5.3.1 Competition between like particles, 117
 - 5.3.2 Competition between unlike particles, 118
 - 5.3.3 Drop spectra broadening in updrafts, 118
- 5.4 Factors modifying the basic flux equations, 119
 - 5.4.1 Solution and curvature effects, 119
 - 5.4.2 Kinetic effects, 120
 - 5.4.3 Ventilation effects, 123
 - 5.4.4 Non-steady state effects, 126
- Problems, 127
- References, 129

6. DIFFUSION GROWTH OF ICE CRYSTALS, 131

- 6.1 Introduction, 131
- 6.2 Ice crystal habits, 131

- 6.2.1 The growth of simple ice crystals, 132
- 6.2.2 The growth of complex ice crystals, 136
- 6.2.3 Classification of ice crystals, 139
- 6.3 The equations governing ice crystal growth, 139
 - 6.3.1 The electrostatic analogy, 139
 - 6.3.2 Shape factors for ice crystals, 144
 - 6.3.3 Integration of the growth equation, 145
 - 6.3.4 Comparison between theory and observations, 146
 - 6.3.5 Ventilation effects, 149
 - 6.3.6 Ice crystal growth in a water cloud, 150
 - 6.3.7 Kinetic effects, 152
 - 6.3.8 Subliming ice crystals, 152
- 6.4 Growth of the ice crystal lattice, 152
 - 6.4.1 Migration of molecules on the crystal surface, 153
 - 6.4.2 Propagation of steps on a crystal face, 154
 - 6.4.3 Propagation of the crystal face, 155
 - 6.4.4 The formation of blocking steps, 160
- 6.5 Ice crystal growth modes, 161
 - 6.5.1 Isometric growth, 161
 - 6.5.2 Constant aspect ratio growth, 161
 - 6.5.3 Limited and skeletal growth, 162
 - 6.5.4 Growth near the melting point, 163
- Problems, 164
- References, 165

7. GROWTH OF DROPS BY COLLECTION, 168

- 7.1 Introduction, 168
- 7.2 The collection equation, 168
 - 7.2.1 Terminal fall velocities for water drops, 170
 - 7.2.2 Collection efficiencies, 175
- 7.3 Solutions of the collection equation, 180
 - 7.3.1 Three models for collection processes, 180
 - 7.3.2 The pure-stochastic model, 181
 - 7.3.3 Quasi-stochastic versus pure-stochastic models, 184
- 7.4 Drop breakup, 185
 - 7.4.1 Modes of drop breakup, 186

- 7.4.2 Drop breakup probabilities, 187
- 7.4.3 Fragments resulting from drop breakup, 191
- Problems, 194
- References, 195

8. GROWTH OF ICE PARTICLES BY COLLECTION, 197

- 8.1 Introduction, 197
- 8.2 The growth of rimed crystals and graupeln, 197
 - 8.2.1 Nomenclature of rimed particles, 198
 - 8.2.2 The collection equation for accreting particles, 198
- 8.3 The growth of hail, 207
 - 8.3.1 Calculation of accreting ice particle temperatures, 208
 - 8.3.2 The Schumann–Ludlam limit, 209
 - 8.3.3 Spongy ice growth and shedding, 211
- 8.4 The growth of snowflakes, 212
 - 8.4.1 Collisions between ice crystals, 212
 - 8.4.2 The sticking probability, 213
 - 8.4.3 Snowflake densities and fall speeds, 216
- 8.5 The melting of ice particles, 219
 - Problems, 222
 - References, 223

9. FORMATION OF PRECIPITATION BY COALESCENCE, 226

- 9.1 Introduction, 226
- 9.2 The formation of a water cloud, 226
 - 9.2.1 Activation of CCN in an updraft, 227
 - 9.2.2 Comparison between observed and modeled drop spectra, 231
 - 9.2.3 Effects of entrainment and mixing, 233
- 9.3 Initiation of the coalescence process, 235
 - 9.3.1 A pure-stochastic model of coalescence, 236
 - 9.3.2 Effects of condensation on the collection kernel, 238
 - 9.3.3 Time required to produce precipitation, 240
- 9.4 Development of an exponential raindrop spectrum, 243
 - 9.4.1 Mass transfer rates between drops of different sizes, 244

- 9.4.2 Shaping the drop spectrum through births, deaths, and migration, 248
- 9.4.3 Relating computed spectra to observations, 249
- 9.5 The rise of water supersaturation in updrafts, 251
 - 9.5.1 Derivation of the steady state supersaturation, 252
 - 9.5.2 Estimates of water supersaturations in updrafts, 254
 - 9.5.3 Possible consequences of high water supersaturations, 256
- 9.6 The role of coalescence and breakup in rainshafts, 257
 - 9.6.1 Evaporative cooling in downdrafts, 258
 - 9.6.2 Formation of virga and scud clouds, 261
- Problems, 262
- References, 263

10. FORMATION OF PRECIPITATION BY THE ICE CRYSTAL MECHANISM, 266

- 10.1 Introduction, 266
- 10.2 The glaciation process, 266
 - 10.2.1 The thermodynamics of glaciation, 267
 - 10.2.2 Glaciation through diffusion and accretion, 269
 - 10.2.3 Interactions between the coalescence and ice crystal processes, 272
- 10.3 Formation of precipitation in stratiform clouds, 275
 - 10.3.1 Extra-tropical cyclones, 276
 - 10.3.2 Orographic clouds, 280
 - 10.3.3 The melting layer, 282
- 10.4 Formation of precipitation in convective clouds, 285
 - 10.4.1 Organization of precipitating convective systems, 287
 - 10.4.2 Characteristics of the precipitation particles, 288
 - 10.4.3 Moisture fluxes and precipitation efficiency, 290
- Problems, 291
- References, 292

11. THE MICROPHYSICAL BASES FOR MODIFICATION OF CLOUDS, 295

- 11.1 Introduction, 295
- 11.2 Physical approaches to precipitation modification, 295

- 11.2.1 Modification of the ice crystal process, 296
- 11.2.2 Modification of the coalescence process, 305
- 11.2.3 Modification of dynamical processes, 310
- 11.3 Statistical approaches to precipitation modification, 312
 - 11.3.1 Physical versus statistical approaches, 312
 - 11.3.2 Design of experiments, 313
 - 11.3.3 Evaluation of experiments, 314
- 11.4 Modification of fog, 318
 - 11.4.1 Supercooled fog, 319
 - 11.4.2 Warm fog, 319
- 11.5 Modification of orographic clouds, 324
 - 11.5.1 Numerical modeling approach, 325
 - 11.5.2 The Climax experiment, 328
 - 11.5.3 The Cascade project, 330
 - 11.5.4 Other orographic seeding projects, 332
- 11.6 Modification of convective clouds, 334
 - 11.6.1 Glaciogenic seeding for microphysical effects, 334
 - 11.6.2 Hygroscopic seeding, 337
 - 11.6.3 Glaciogenic seeding for dynamical effects, 340
- 11.7 Inadvertent modification of cloud processes, 343
 - Problems, 344
 - References, 346

12. THE FORMATION AND MODIFICATION OF HAIL, 352

- 12.1 Introduction, 352
- 12.2 Structure of hailstorms, 353
 - 12.2.1 Multi-cell thunderstorms, 353
 - 12.2.2 Supercell thunderstorms, 355
- 12.3 Requirements for the growth of hail, 355
 - 12.3.1 The embryo formation region, 356
 - 12.3.2 The hail growth zone, 359
- 12.4 Hailstone selection mechanisms, 360
 - 12.4.1 Deterministic versus stochastic selection, 361
 - 12.4.2 Size sorting, 363

- 12.4.3 The effects of updraft tilt and width on hail production, 365
- 12.4.4 Embryo source region, 368
- 12.5 Hail suppression concepts, 372
 - 12.5.1 Glaciation, 372
 - 12.5.2 Beneficial competition, 374
 - 12.5.3 Trajectory lowering, 376
 - 12.5.4 Hail suppression projects, 378
- Problems, 380
- References, 381

13. CIRRIFORM CLOUDS, 383

- 13.1 Introduction, 383
- 13.2 Structure of cirriform clouds, 384
 - 13.2.1 Cirrus uncinus, 384
 - 13.2.2 Cirrostratus, 386
 - 13.2.3 Thunderstorm anvils, 387
- 13.3 Nucleation of ice particles, 387
- 13.4 Radiative properties of cirriform clouds, 390
- 13.5 Growth and survival of cirrus particles, 391
 - 13.5.1 Effects of radiative transfer, 391
 - 13.5.2 Cirrus particle survival, 393
- Problems, 394
- References, 395

Appendix 1. Review of thermodynamics, 396

- A.1.1 Dry adiabatic processes, 396
 - A.1.1.1 Equation of state for moist air, 396
 - A.1.1.2 Poisson's equation and potential temperature, 397
 - A.1.1.3 The dry adiabatic lapse rate, 398
 - A.1.1.4 Water vapor correction to Poisson's equation, 399
- A.1.2 Phase change and latent heat, 400
 - A.1.2.1 $P\alpha T$ diagrams for the water system, 400
 - A.1.2.2 Latent heat and the Clausius-Clapeyron relation, 404
- A.1.3 Expressions of water vapor content, 406
 - A.1.3.1 Mixing ratio and specific humidity, 406
 - A.1.3.2 Dewpoint temperature and relative humidity, 406
 - A.1.3.3 Wet-bulb temperature, 407

- A.1.4 Pseudo-adiabatic processes, 409
 - A.1.4.1 Derivation of the pseudo-adiabatic equation, 409
 - A.1.4.2 Pseudo-adiabatic lapse rate, 411
 - A.1.4.3 Equivalent temperatures, 411
- Problems, 412
- References, 413

Appendix 2. A brief overview of numerical models for microphysical processes, 414

- A.2.1 Particle-tracing models, 414
- A.2.2 Bin models, 415
- A.2.3 Spectral models, 417
- A.2.4 Dimensionality of models, 417
- A.2.5 Kinematic versus dynamic models, 417
- References, 418

Appendix 3. Useful constants and definitions, 419

- Constants, 419
- Conversion factors, 419
- Dimensionless numbers, 420

Index, 423
