Contents

Preface	xi
Introduction	xiii
List of Symbols	xv

Part I Fundamentals

Chapter 1 Identification of Clouds

1.1 Atmospheric Structure and Scales	4
1.2 Cloud Types Identified Visually	5
1.2.1 Genera, Species, and Étages	5
1.2.2 Low Clouds	7
1.2.3 Middle Clouds	13
1.2.4 High Clouds	15
1.2.5 Orographic Clouds	19
1.3 Cloud Systems Identified by Satellite	22
1.3.1 Mesoscale Convective Systems	22
1.3.2 Hurricanes	23
1.3.3 Extratropical Cyclones	24

Chapter 2 Atmospheric Dynamics

2.1 The Basic Equations	26
2.1.1 Equation of Motion	26
2.1.2 Equation of State	27
2.1.3 Thermodynamic Equation	27
2.1.4 Mass Continuity	29
2.1.5 Water Continuity	29
2.1.6 The Full Set of Equations	30
2.2 Balanced Flow	30
2.2.1 Quasi-Geostrophic Motion	30
2.2.2 Semigeostrophic Motions	31
2.2.3 Gradient-Wind Balance	33
2.2.4 Hydrostatic Balance	33
2.2.5 Thermal Wind	34
2.2.6 Cyclostrophic Balance	35
2.3 Anelastic and Boussinesq Approximations	35
2.4 Vorticity	38
2.5 Potential Vorticity	39

2.6	Perturbation Form of the Equations	40
2.6.1	Equation of State and Continuity Equation	41
2.6.2	Thermodynamic and Water-Continuity Equations	41
2.6.3	Equation of Motion	42
2.6.4	Eddy Kinetic Energy Equation	43
2.7	Oscillations and Waves	44
2.7.1	Buoyancy Oscillations	44
2.7.2	Gravity Waves	45
2.7.3	Inertial Oscillations	47
2.7.4	Inertio-Gravity Waves	48
2.8	Adjustment to Geostrophic and Gradient Balance	49
2.9	Instabilities	53
2.9.1	Buoyant, Inertial, and Symmetric Instabilities	53
2.9.2	Kelvin-Helmholtz Instability	56
2.9.3	Rayleigh-Bénard Instability	61
2.10	Representation of Eddy Fluxes	64
2.10.1	K-Theory	65
2.10.2	Higher-Order Closure	66
2.10.3	Large-Eddy Simulation	66
2.11	The Planetary Boundary Layer	66
2.11.1	The Ekman Layer	66
2.11.2	Boundary-Layer Stability	68
2.11.3	The Surface Layer	68

Chapter 3 Cloud Microphysics

3.1	Microphysics of Warm Clouds	69
3.1.1	Nucleation of Drops	69
3.1.2	Condensation and Evaporation	72
3.1.3	Fall Speeds of Drops	75
3.1.4	Coalescence	76
3.1.5	Breakup of Drops	80
3.2	Microphysics of Cold Clouds	81
3.2.1	Homogeneous Nucleation of Ice Particles	81
3.2.2	Heterogeneous Nucleation of Ice Particles	82
3.2.3	Deposition and Sublimation	84
3.2.4	Aggregation and Riming	85
3.2.5	Hail	87
3.2.6	Ice Enhancement	89
3.2.7	Fall Speeds of Ice Particles	90
3.2.8	Melting	93
3.3	Types of Microphysical Processes and Categories of Water Substance in Clouds	94
3.4	Water-Continuity Equations	95
3.5	Explicit Water-Continuity Models	97
3.5.1	General	97
3.5.2	Explicit Modeling of Warm Clouds	98
3.5.3	Explicit Modeling of Cold Clouds	101
3.6	Bulk Water-Continuity Models	101
3.6.1	Bulk Modeling of Warm Clouds	102
3.6.2	Bulk Modeling of Cold Clouds	105

Chapter 4 Radar Meteorology

4.1	General Characteristics of Meteorological Radars	107
4.2	Reflectivity Measurements	110
4.2.1	Obtaining Reflectivity from Returned Power	110
4.2.2	Relating Reflectivity to Precipitation	112
4.2.3	Estimating Areal Precipitation from Radar Data	115
4.3	Polarization Data	117
4.4	Doppler Velocity Measurements	120
4.4.1	Radial Velocity	120
4.4.2	Velocity and Range Folding	122
4.4.3	Vertical Incidence Observations	123
4.4.4	Range-Height Data	124
4.4.5	Velocity-Azimuth Display Method	124
4.4.6	Multiple-Doppler Synthesis	127
4.4.7	Retrieval of Thermodynamic and Microphysical Variables	129

Part II Phenomena

Chapter 5 Shallow-Layer Clouds

5.1	Fog and Stratus in a Boundary Layer Cooled from Below	139
5.1.1	General Considerations	139
5.1.2	Turbulent Mixing in Fog	140
5.1.3	Radiation Fog	143
5.1.4	Arctic Stratus	150
5.2	Stratus, Stratocumulus, and Small Cumulus in a Boundary Layer Heated from Below	152
5.2.1	General Considerations	152
5.2.2	Cloud-Topped Mixed Layer	155
5.2.3	Mesoscale Structure of Mixed-Layer Clouds	165
5.3	Cirriform Clouds	174
5.3.1	General Considerations	174
5.3.2	Cirrus Uncinus	177
5.3.3	Ice-Cloud Outflow from Cumulonimbus	179
5.3.4	Cirriform Cloud in a Thin Layer Apart from a Generating Source	185
5.4	Altostratus and Altocumulus	189
5.4.1	Altostratus and Altocumulus Produced as Remnants of Other Clouds	189
5.4.2	Altocumulus as High-Based Convective Clouds	189
5.4.3	Altostratus and Altocumulus as Shallow-Layer Clouds Aloft	191
5.4.4	Ice Particle Generation by Altocumulus Elements	193
5.4.5	Interaction of Altocumulus and Lower Cloud Layers	194

Chapter 6 Nimbostratus

6.1	Stratiform Precipitation	197
6.1.1	Definition and Distinction from Convective Precipitation	197
6.1.2	Radar-Echo Structure	200

6.1.3	Microphysical Observations	201
6.1.4	Role of Convection	204
6.2	Nimbostratus with Shallow Embedded Convection Aloft	205
6.3	Nimbostratus Associated with Deep Convection	211
6.4	Radiation and Turbulent Mixing in Nimbostratus	217

Chapter 7 Cumulus Dynamics

7.1	Buoyancy	222
7.2	Pressure Perturbation	223
7.3	Entrainment	226
7.3.1	General Considerations	226
7.3.2	Continuous, Homogeneous Entrainment	227
7.3.3	Discontinuous, Inhomogeneous Entrainment	239
7.4	Vorticity	247
7.4.1	General Considerations	247
7.4.2	Horizontal Vorticity	249
7.4.3	Vertical Vorticity	251
7.5	Modeling of Convective Clouds	253
7.5.1	General Considerations	253
7.5.2	One-Dimensional Time-Dependent Model	254
7.5.3	Two- and Three-Dimensional Models	262

Chapter 8 Thunderstorms

8.1	Small Cumulonimbus Clouds	268
8.2	Multicell Thunderstorms	273
8.3	Supercell Thunderstorms	278
8.4	Environmental Conditions Favoring Different Types of Thunderstorms	283
8.5	Supercell Dynamics	288
8.5.1	Storm Splitting and Propagation	288
8.5.2	Directional Shear	289
8.6	Transition of the Supercell to the Tornadoic Phase	291
8.7	Nonsupercell Tornadoes and Waterspouts	295
8.8	The Tornado	298
8.8.1	Observed Structure and Life Cycle	298
8.8.2	Tornado Vortex Dynamics	303
8.9	Gust Fronts	313
8.10	Downbursts	319
8.10.1	Definitions and Descriptive Models	319
8.10.2	Effects of Microbursts on Aircraft	321
8.10.3	Dynamics of Microbursts	323
8.11	Lines of Thunderstorms	329

Chapter 9 Mesoscale Convective Systems

9.1	General Characteristics of the Cloud and Precipitation Patterns	335
9.1.1	Satellite Observations	335
9.1.2	Precipitation Structure	338
9.1.3	Life Cycle of a Precipitation Area	346

9.2	The Squall Line with Trailing Stratiform Precipitation	348
9.2.1	General Features	348
9.2.2	The Convective Region	354
9.2.3	The Stratiform Region	369
9.3	General Kinematic Characteristics of Mesoscale Convective Systems	394
9.3.1	Divergence Associated with Mesoscale Convective Systems	394
9.3.2	Vorticity in Regions Containing Mesoscale Convective Systems	401

Chapter 10 Clouds in Hurricanes

10.1	General Features of Hurricanes	406
10.1.1	Definition and Regions of Formation	406
10.1.2	General Pattern of Clouds and Precipitation	406
10.1.3	Storm-Scale Kinematics and Thermodynamics	406
10.2	The Inner-Core Region	414
10.3	Basic Hurricane Dynamics	416
10.4	Clouds and Precipitation in the Eyewall	425
10.4.1	Slantwise Circulation in the Eyewall Cloud	425
10.4.2	Strength of the Radial-Vertical Circulation in the Eyewall Cloud	427
10.4.3	Vertical Convection in the Eyewall	430
10.4.4	Downdrafts	433
10.4.5	Eyewall Propagation	433
10.5	Rainbands	436

Chapter 11 Precipitating Clouds in Extratropical Cyclones

11.1	Structure and Dynamics of a Baroclinic Wave	440
11.1.1	Idealized Horizontal and Vertical Structure	440
11.1.2	Dynamics Governing Large-Scale Vertical Air Motion	442
11.1.3	Application of the Omega Equation to a Real Baroclinic Wave	445
11.1.4	Low-Level Cyclone Development	447
11.2	Circulation at a Front	449
11.2.1	Quasi-Geostrophic Frontogenesis	451
11.2.2	Semigeostrophic Frontogenesis	453
11.2.3	Moist Frontogenesis	460
11.2.4	Some Simple Theoretical Examples	461
11.3	Horizontal Patterns of Frontal Zones in Developing Cyclones	463
11.4	Clouds and Precipitation in a Frontal Cyclone	467
11.4.1	Satellite-Observed Cloud Patterns	467
11.4.2	Distribution of Precipitation within the Cloud Pattern	472
11.4.3	Narrow Cold-Frontal Rainbands	475
11.4.4	Wide Cold-Frontal Rainbands	481
11.4.5	Warm-Frontal Rainbands	484
11.4.6	Clouds and Precipitation Associated with the Occlusion	489
11.5	Clouds in Polar Lows	496
11.5.1	Comma-Cloud System	496
11.5.2	Small Hurricane-like Vortex	499

Chapter 12 Orographic Clouds

12.1	Shallow Clouds in Upslope Flow	502
12.2	Wave Clouds Produced by Long Ridges	502

12.2.1	Flow over Sinusoidal Terrain	504
12.2.2	Flow over a Ridge of Arbitrary Shape	506
12.2.3	Clouds Associated with Vertically Propagating Waves	508
12.2.4	Clouds Associated with Lee Waves	509
12.2.5	Nonlinear Effects: Large-Amplitude Waves, Blocking, the Hydraulic Jump, and Rotor Clouds	512
12.3	Clouds Associated with Flow over Isolated Peaks	520
12.4	Orographic Precipitation	530
12.4.1	Seeder-Feeder Mechanism over Small Hills	530
12.4.2	Upslope Condensation	531
12.4.3	Orographic Convection	534
	References	539
	Index	557
