## TABLE OF CONTENTS

PREFACE	xiii
CHAPTER 1 HISTORICAL REVIEW	1
CHAPTER 2 MICROSTRUCTURE OF ATMOSPHERIC CLOUDS AND PRECIPITATION	9
2.1 Microstructure of Clouds and Precipitation Consisting of Water Drops	9
2.1.1 Clouds and Fogs	9
2.1.2 Rain	22
2.2 Microstructure of Cloud and Precipitation Consisting of Ice Parti- cles	27
2.2.1 Shape, Dimensions, Bulk Density, and Number Concen- tration of Ice Crystals	28
2.2.2 Shape, Dimensions, Bulk Density, and Number Concen- tration of Snowflakes, Graupel, and Hailstones	44
CHAPTER 3 THE STRUCTURE OF WATER SUBSTANCE	56
3.1 Structure of an Isolated Water Molecule	56
3.2 Structure of Water Vapor	59
3.3 Structure of Ice	60
3.4 Structure of Water and Aqueous Solutions	65
CHAPTER 4 EQUILIBRIUM BETWEEN WATER VAPOR, WATER, AQUEOUS SOLUTIONS, AND ICE IN BULK	71
4.1 Useful Thermodynamic Relations	71
4.2 General Conditions for Equilibrium	73
4.3 Phase Rule	75
4.4 Ideal Versus Real Behavior of Dry Air, Water Vapor, and Moist Air	75
4.5 Chemical Potential of Water Vapor in Humid Air, and of Water in Aqueous Solutions	78
4.6 Equilibrium Between an Aqueous Salt Solution and Water Vapor	80

4.7	Bulk Density of Ice, Water, and Aqueous Solutions	85
4.8	Latent Heat of Phase Change and its Temperature Variation	88
4.9	Clausius-Clapeyron Equation	90
4.10	Equilibrium Between an Aqueous Salt Solution and Ice	97

## CHAPTER 5 SURFACE PROPERTIES OF WATER SUBSTANCE

100

5.1	Surface Tension	100
5.2	Equilibrium Conditions	101
5.3	Phase Rule for Systems with Curved Interfaces	102
5.4	Water-Vapor Interface	103
5.4.1	Effect of Temperature on Surface Tension	104
5.4.2	Surface Tension of a Salt Solution	105
5.4.3	Radius Dependence of Surface Tension	107
5.5	Angle of Contact	109
5.6	Adsorption of Gases onto Solid Surfaces	111
5.7	Ice-Vapor Interface	120
5.7.1	Surface Energy of Ice	120
5.7.2	Wulff's Theorem	121
5.7.3	Real Ice Surfaces	124
5.8	Ice-Water and Ice-Aqueous Solution Interfaces	129
5.9	Condensation, Deposition, and Thermal Accommodation Coefficients	133

## CHAPTER 6 EQUILIBRIUM BEHAVIOR OF CLOUD DROPS AND ICE PARTICLES

136

6.1	General Equilibrium Relation for Two Phases Separated by a Curved Interface	136
6.2	Effect of Curvature on Latent Heat of Phase Change	137
6.3	Generalized Clausius-Clapeyron Equation	138
6.4	Equilibrium Between a Pure Water Drop and Pure Water Vapor or Humid Air	139
6.5	Equilibrium Between an Aqueous Solution Drop and Humid Air	141
6.6	Equilibrium Between Humid Air and an Aqueous Solution Drop Containing a Solid Insoluble Substance	146
6.7	Equilibrium Conditions for Ice Particles	149
6.8	Experimental Verification	153
6.9	Equilibrium Growth of Atmospheric Aerosol Particles	155

CHAPTER 7	HOMOGENEOUS NUCLEATION	162
7.1	Equilibrium Population of Embryos	162
7.1.1	Formal Statistical Mechanics Description	163
7.1.2	Classical Description	164
7.1.3	Modified Classical Description	168
7.1.4	Molecular Model Method	170
7.2	Nucleation Rate $J$	172
7.2.1	Equilibrium Approximation for $J$	172
7.2.2	Steady State Rate Approximation for $J$	172
7.3	Experimental Verification	180
CHAPTER 8	THE ATMOSPHERIC AEROSOL	183
8.1	Gaseous Constituents of the Atmosphere	183
8.2	Atmospheric Aerosol Particles (AP)	187
8.2.1	Formation of AP by Gas-to-Particle Conversion (GPC)	187
8.2.2	Formation of AP by Mechanical and Chemical Disintegration and Dispersal at the Solid Earth Surface	191
8.2.3	Formation of AP by Mechanical Disintegration and Dispersal at the Surface of Oceans	194
8.2.4	AP from Extraterrestrial Sources	197
8.2.5	Rate of Emission of Particulate Matter into the Atmosphere	198
8.2.6	Residence Time ( $\tau_{AP}$ ) of AP	199
8.2.7	Water-Soluble Fraction of AP	200
8.2.8	Total Concentration and Vertical Variation of AP over Land	202
8.2.9	Total Concentration and Vertical Variation of AP over Oceans	209
8.2.10	Size Distribution of AP	211
8.3	Aerosol Substances in Cloud and Precipitation Water	219
CHAPTER 9	HETEROGENEOUS NUCLEATION	225
9.1	Cloud Condensation Nuclei (CCN)	225
9.1.1	Number Concentration of CCN	225
9.1.2	Mode of Action of Water-Soluble and Mixed CCN	230
9.1.3	Nucleation on Water-Insoluble, Partially Wettable CCN	231
9.1.3.1	Nucleation on a Planar Substrate	232
9.1.3.2	Nucleation on a Curved Substrate	235
9.1.4	Experimental Verification of Heterogeneous Water Drop Nucleation	238
9.2	Ice Forming Nuclei (IN)	241
9.2.1	Number Concentration of IN	241
9.2.2	Sources of IN	248
9.2.3	Characteristic Features and Mode of Action of IN	255

9.2.3.1	Insolubility Requirement	255
9.2.3.2	Size Requirement	255
9.2.3.3	Chemical Bond Requirement	257
9.2.3.4	Crystallographic Requirement	257
9.2.3.5	Active-Site Requirement	259
9.2.4	Theory of Heterogeneous Ice Nucleation	268
9.2.4.1	Classical Model	268
9.2.4.2	Extensions of the Classical Model	271
9.2.5	Heterogeneous Freezing of Supercooled Water Drops	274
9.2.6	Heterogeneous Freezing of Supercooled Aqueous Solution Drops	280
 CHAPTER 10 HYDRODYNAMICS OF SINGLE CLOUD AND PRECIPITATION PARTICLES		 282
10.1	Basic Governing Equations	282
10.2	Flow Past a Rigid Sphere	284
10.2.1	Classification of Flows According to Reynolds Number	284
10.2.2	Stream Function	286
10.2.3	The Drag Problem	288
10.2.4	Analytical Solutions for the Sphere	290
10.2.5	Numerical Approach to the Navier-Stokes Equation	299
10.2.6	Comparison of Analytical and Numerical Solutions of the Navier-Stokes Equation with Experimental Results	300
10.3	Hydrodynamic Behavior of Water Drops in Air	305
10.3.1	Internal Circulation in Drops	305
10.3.2	Shape of Water Drops	311
10.3.3	Drop Oscillation	315
10.3.4	Drop Instability and Breakup	318
10.3.5	Terminal Velocity of Water Drops in Air	322
10.4	Hydrodynamic Behavior of Disks, Oblate Spheroids, and Cylinders	328
10.4.1	Circular Disks and Oblate Spheroids	328
10.4.2	Circular Cylinders	334
10.5	Motion of Ice Crystals, Snowflakes, Graupel, and Hailstones	337
 CHAPTER 11 COOLING OF MOIST AIR		 347
11.1	Water in the Atmosphere	347
11.2	Isobaric Cooling	349
11.3	Adiabatic Cooling of Unsaturated Air	350
11.4	Adiabatic Cooling of Saturated Air	352
11.5	Cooling with Entrainment	353
11.6	Governing Equations for a One-Dimensional Cloud	354

<b>CHAPTER 12 MECHANICS OF THE ATMOSPHERIC AEROSOL</b>		<b>358</b>
12.1	Brownian Motion of Aerosol Particles	358
12.2	Particle Diffusion	360
12.3	Mobility and Drift Velocity	361
12.4	Sedimentation and the Vertical Distribution of Aerosol Particles	362
12.5	Brownian Coagulation of Aerosol Particles	364
12.6	Laminar Shear, Turbulence, and Gravitational Coagulation	371
12.6.1	Coagulation in Laminar Shear Flow	371
12.6.2	Coagulation in Turbulent Flow	372
12.6.2.1	Turbulent Shear Coagulation	374
12.6.2.2	Turbulent Inertial Coagulation	375
12.6.3	Gravitational Coagulation	376
12.7	Scavenging of Aerosols	380
12.7.1	Scavenging by Convective Diffusion	380
12.7.2	Scavenging by Thermophoresis and Diffusiophoresis	384
12.7.3	Scavenging by Turbulence	389
12.7.4	Scavenging by Gravitational or Inertial Impaction	390
12.7.5	Overall Scavenging Effects	395
12.8	Explanations for the Observed Size Distribution of the Atmospheric Aerosol	399
12.8.1	Quasi-Stationary Distributions (QSD)	399
12.8.2	Self-Preserving Distributions (SPD)	401
12.8.3	Quasi-Stationary Self-Preserving Distributions	407
12.8.4	Statistical Distributions	407
12.8.5	Power Law Solutions for a Source-Enhanced Aerosol	409
<b>CHAPTER 13 DIFFUSION GROWTH AND EVAPORATION OF WATER DROPS AND ICE CRYSTALS</b>		<b>412</b>
13.1	Laws for Diffusion of Water Vapor and Heat	412
13.1.1	Diffusion of Water Vapor	412
13.1.2	Diffusion of Heat	417
13.2	Diffusional Growth of Aqueous Solution Drops	418
13.2.1	Growth of an Individual Stationary Drop	418
13.2.2	Diffusional Growth of a Population of Solution Drops of Negligible Fall Velocity	420
13.2.2.1	Condensation Growth in Cumuliform Clouds	421
13.2.2.2	Condensation Growth in Stratiform Clouds	437
13.2.3	Steady State Evaporation of Water Drops Falling in Saturated Air	440
13.3	Diffusional Growth of Ice Crystals	448
13.3.1	Growth of a Stationary Ice Crystal	448
13.3.2	Growth of a Ventilated Ice Crystal	450
13.3.3	Growth Rate of Ice Crystal Faces - Ice Crystal Habit Change	458

<b>CHAPTER 14 CLOUD PARTICLE INTERACTIONS- COLLISION, COALESCENCE, AND BREAKUP</b>		<b>464</b>
14.1	The Basic Model for Drop Collisions	464
14.2	Definition of Collision Efficiency	465
14.3	The Superposition Method	467
14.4	The Boundary Value Problem Approach	470
14.4.1	The Quasi-Stationary Assumption	470
14.4.2	Two Spheres in Steady Stokes Flow	471
14.4.3	The Slip-Flow Correction in Stokes Flow	473
14.4.4	Two Spheres in Modified Oseen Flow	475
14.5	Enhancement of Gravitational Collection by Turbulence	477
14.6	Theoretical Collision Efficiencies of Water Drops in Air	479
14.6.1	The Case of Calm Air	479
14.6.2	The Case of Turbulent Air	482
14.7	Experimental Verification	484
14.8	Coalescence of Water Drops in Air	487
14.8.1	The Rebound Problem	488
14.8.2	Disruption Following Coalescence	492
14.9	Collisions of Ice Crystals with Water Drops	495
14.10	Collisions of Ice Crystals with Ice Crystals	501
 <b>CHAPTER 15 GROWTH OF CLOUD DROPS BY COLLISION AND COALESCENCE</b>		 <b>504</b>
15.1	Continuous Model for Collection Growth	504
15.2	Stochastic Model for Collection Growth	508
15.2.1	Completeness of the SCE	509
15.2.1.1	Three Models for Collection Growth	510
15.2.1.2	Correlations in a Stochastic Coalescence Process	513
15.2.2	Exact Solutions to the SCE	515
15.2.3	Approximation Techniques for the SCE	521
15.2.3.1	Method of Moments	522
15.2.3.2	Polynomial Approximations to the Gravitational Collection Kernel	528
15.2.4	Numerical Methods for the Collection Process	531
15.2.4.1	Method for Berry (1967) and Reinhardt (1972)	531
15.2.4.2	Method of Kovetz and Olund (1969)	533
15.2.4.3	Monte Carlo Method	534
15.2.5	Parameterization of the Collection Process	535
15.3	Representative Numerical Results for the Collection Process	537
15.4	Collection Growth with Condensation and Breakup	541

<b>CHAPTER 16 MICROPHYSICS OF ICE PARTICLE-DROP INTERACTIONS</b>		<b>545</b>
16.1	Growth Mode and Structure of Rimed Ice Particles, Graupel, and Hailstones	545
16.2	Freezing Time of Water Drops	549
16.3	Structure and Growth Mode of Ice in Supercooled Water	554
16.4	Growth Rate of Ice in Supercooled Water	558
16.5	Growth Rate of Graupel and Hailstones	565
16.6	Ice Particle Multiplication Processes	572
16.7	Melting of Ice Particles	577
 <b>CHAPTER 17 THE ELECTRICAL STATE OF THE ATMOSPHERE AND ITS EFFECTS ON CLOUD MICROPHYSICS</b>		 <b>580</b>
17.1	Electrical State of the Cloudless Atmosphere	580
17.2	Electrical State of the Atmospheric Aerosol	582
17.3	Electrical Conductivity in Clouds	585
17.3.1	Diffusion and Conduction of Ions to Cloud Drops	585
17.3.2	Conductivity in Weakly Electrified Clouds	586
17.3.3	Conductivity in Strongly Electrified Clouds	589
17.4	Cloud Electrification	593
17.4.1	Weakly Electrified Clouds	593
17.4.2	Strongly Electrified Clouds	595
17.4.2.1	Observed Charges and Fields	595
17.4.2.2	Models for Cloud Electrification	599
17.5	Effect of Electric Fields and Charges on Microphysical Processes	606
17.5.1	Drop and Ice Crystal Nucleation	606
17.5.2	Diffusional Growth of Ice Crystals	607
17.5.3	Drop Disruption and Corona Production	608
17.5.4	Drop Terminal Velocities	611
17.5.5	Collisional Growth Rate of Cloud Particles	612
17.5.6	Scavenging of Aerosol Particles	620
 <b>APPENDICES</b>		 <b>625</b>
A-4.9	Convenient Formulations for Determining the Saturation Vapor Pressure Over Water and Ice (Lowe and Ficke, 1974)	625
A-7.1	Relations from Statistical Mechanics	625
A-10.1	Equations of Fluid Flow	628
A-10.2.2	Stream Function Formulation for Axisymmetric, Incompressible Flow	630
A-10.3.3	Drop Oscillations	631
A-10.3.4	Rayleigh-Taylor Instability of Two Superposed Fluids	632

A-12.4	Mutual Sedimentation and Diffusion of Aerosol Particles	633
A-14.1	Nearest Neighbor Distance Between Cloud Drops	634
A-14.3	Superposition Method for Stokes Flow	635
A-14.4.2	Special Problems 1, 2, 3 for Two Spheres in Steady State Stokes Flow	636
A-14.4.3	Details of the Slip-Flow Correction	640
A-14.4.4	Flow Field and Forces for Two Spheres in Modified Oseen Flow	640
A-14.5	Drop Interactions in Turbulent Air (de Almeida, 1975)	643
A-15.2.1.2	Correlations in a Stochastic Coalescence Process (Bayewitz <i>et al.</i> , 1974)	647
A-15.2.2	Particular Solutions to the SCE	650
A-15.2.4.3	A Monte Carlo Algorithm for Stochastic Coalescence	651
A-15.2.5	Parameterization of Accretion and Hydrometeor Self-Collection	653
A-17.5.5	Two Charged Conducting Spheres in a Background Electric Field	655
	REFERENCES	657
