## TABLE OF CONTENTS

PREFACE	IX
INTRODUCTION	1
CHAPTER 1. EQUATIONS OF HEAT AND MOISTURE TRANSFER IN A TURBULENT ATMOSPHERE	18
1.1. Water-vapor influx (balance)	18
1.2. Heat influx (balance)	23
1.3. Influxes of heat and water vapor in moist saturated air (in a cloud)	25
1.4. Equations for temperature and condensation rate of water vapor	29
1.5. Cloud-droplet distribution functions	31
1.5.1. <i>Droplet growth by condensation                 in a turbulent medium</i>	32
1.5.2. <i>Droplet growth by coalescence                 in a turbulent medium</i>	37
1.6. Equations of stochastic condensation	39
CHAPTER 2. MODELS OF STRATIFORM-CLOUD FORMATION	43
2.1. Solution of the system of equations for heat and moisture exchange in a turbulent atmosphere	43
2.1.1. <i>Taking into account the fall of                 cloud elements and the fallout                 of precipitation</i>	49
2.2. Formation and evolution of stratiform clouds	52
2.3. Precipitation modeling and the microphysical quantities of a stratus cloud	59
2.3.1. <i>Droplet clouds</i>	59
2.3.2. <i>Mixed clouds</i>	64
2.3.3. <i>Formation of a stratus                 cloud in the boundary                 layer of the atmosphere</i>	68
2.4. Modeling of frontal cloudiness	70
2.5. The lower cloud boundary	78
2.6. The role of turbulence and	

	radiation in the formation of stratus clouds in the Arctic	81
CHAPTER 3.	MODELS OF FOG FORMATION	85
3.1.	Radiation fogs	85
3.2.	Evaporation fogs	94
3.3.	Advection fogs	102
3.4.	On urban fogs	110
CHAPTER 4.	ATMOSPHERIC MOISTURE CONTENT AND CLOUD WATER RESERVES	116
4.1.	Modeling fields of atmospheric moisture content and cloud water reserves	116
4.2.	The water-vapor in an air column and cloud water reserves according to data of radio and aircraft sounding	124
4.3.	The atmospheric moisture content and cloud water reserves according to radiometric data	129
CHAPTER 5.	THE HYDRODYNAMIC PREDICTION OF CLOUDINESS AND PRECIPITATION	136
5.1.	The first models of precipitation prediction	136
5.2.	A hydrodynamic five-level model for predicting humidity and cloudiness	137
5.3.	A ten-level model for predicting frontal precipitation	146
5.4.	A numerical model for predicting the formation of stratus in the atmospheric boundary layer	151
5.5.	A numerical model for predicting cloudiness and precipitation	152
5.6.	A synoptic-hydrodynamic method for predicting precipitation	160
CHAPTER 6.	MESOSCALE ATMOSPHERIC MOTIONS AND CLOUDINESS	165
6.1.	Some experimental data on mesoscale clouds	165
6.2.	A numerical model of convection in an unstable layer	168

6.3.	Ensembles of cumulus clouds	175
6.4.	The albedo of a cumulus field	183
6.5.	Cloud formation in a mountainous region	185
CHAPTER 7.	THE VERTICAL STRUCTURE OF A CLOUD FIELD	198
7.1.	Correlations between cloudiness characteristics	198
7.1.1.	<i>The vertical structure of the temperature field</i>	200
7.1.2.	<i>The height of the cloud boundaries</i>	202
7.1.3.	<i>The humidity field</i>	204
7.1.4.	<i>Double-layer cloudiness</i>	206
7.2.	Statistical methods for determining cloud boundaries and temperatures	210
7.3.	The statistical correlation between temperature increments in time	212
7.4.	Conditions preceding and accompanying cloud formation	219
7.5.	Frontal clouds; precipitation and cloud water content	225
CHAPTER 8.	STATISTICAL DATA OF CLOUDS AND CLOUD BEHAVIOR	231
8.1.	Cloud boundaries and depth; amount of cloud cover	231
8.2.	Air humidity in clouds	243
8.3.	Cloud water content	245
8.4.	Phase states of clouds	249
8.5.	Horizontal dimensions and fluctuations of cloud fields	252
CHAPTER 9.	THE GLOBAL CLOUDINESS FIELD	257
9.1.	Seasonal average of the zonal cloudiness field	258
9.2.	Cloud-field averages over large areas	261
9.3.	Cloud-cover distribution density and distribution functions and their approximation	264
9.3.1.	<i>Effect of averaging area on the cloud-cover distribution density</i>	264
9.3.2.	<i>Approximating cloud-cover distributions</i>	268

9.3.3.	<i>Approximating cloud-cover distribution functions using squares of different sizes</i>	270
9.3.4.	<i>Cloud-cover distribution functions averaged over latitude circles and seasons, and their approximation</i>	271
9.4.	Cloud-cover correlation functions	274
9.5.	Parametrization of the global cloudiness field using complete systems of spectral functions	277
CHAPTER 10.	THE STATISTICAL STRUCTURE OF THE HUMIDITY FIELD IN THE ATMOSPHERE	281
10.1.	Expansion in natural orthogonal functions	281
10.2.	The effect of cloudiness on the vertical profiles of temperature and humidity	284
10.3.	Correlations between variations of specific humidity	288
