 Preface

CHAPTER 1: Introduction	1
CHAPTER 2: The Effect of Monomodal Drop Size Distributions, Cloud Top Heights, Cloud Thickness and Vertical Water Vapor Profiles upon Cloud Heating Rates and the Cloud Radiation Field	
—RONALD M. WELCH AND STEPHEN K. COX	3
2.1 <i>Attenuation data</i>	3
2.1.1 Gaseous absorption	3
2.1.2 Droplet attenuation parameters	3
2.2 <i>Method of calculation</i>	6
2.2.1 Delta function method	6
2.2.2 Comparison with adding method	6
2.2.3 Sensitivity of bulk radiative properties to variations in phase function expansion coefficients	7
2.3 <i>Applications to the GATE region</i>	8
2.3.1 Cloud heating rates	8
2.3.2 Variation in water vapor profile	10
2.3.3 Comparisons with observations	10
2.3.4 Integrated daily heating rates	11
2.3.5 Discussion of results	11
2.4 <i>The effect of drop size distributions upon the radiation field</i>	12
2.4.1 Cloud heating rates	12
2.4.2 Reflectance, transmittance and absorptance	14
2.4.3 Reflectance, transmittance and absorptance defined in terms of incident solar flux	15
2.4.4 Vertically inhomogeneous clouds	16
2.4.5 Variations in cloud radiative characteristics as a function of drop size distribution for clouds of constant optical thickness	18
2.5 <i>Summary</i>	20
CHAPTER 3: The Effect of Cloud Bimodal Drop Size Distributions upon the Radiative Characteristics of Clouds	
—RONALD M. WELCH AND STEPHEN K. COX	23
3.1 <i>Theoretical considerations</i>	23
3.1.1 The presence of large drop sizes in clouds	23
3.1.2 Calculation of bimodal attenuation parameters	24
3.1.3 Large-particle mode size distributions	25
3.1.4 Large-particle extinction and absorption coefficients	26
3.1.5 Phase functions	28
3.2 <i>Radiative transfer calculations</i>	28
3.2.1 Monomodal large drop size distributions in thin clouds	28
3.2.2 Monomodal large drop size distributions in thick clouds	30
3.2.3 Bimodal drop size distributions in thin clouds	33
3.2.4 Bimodal drop size distributions in thick clouds	35

3.2.5 Heating rates	37
3.2.6 Multimodal drop size distributions	38
3.2.7 Variations in cloud radiative characteristics as a function of bimodal drop size distributions for clouds of constant optical thickness	40
3.3 <i>Summary</i>	42
CHAPTER 4: The Solar Radiative Properties of Ice Clouds	
—RONALD M. WELCH AND STEPHEN K. COX	43
4.1 <i>Ice crystal characteristics</i>	43
4.2 <i>Theoretical considerations</i>	44
4.2.1 Radiative properties of ice crystals	45
4.2.2 Physical properties of ice clouds	47
4.2.3 Ice crystal size distributions	47
4.2.4 Complex indices of refraction for ice particles	48
4.2.5 Extinction, scattering and absorption properties of ice clouds	50
4.3 <i>Results</i>	53
4.3.1 Spherical and nonspherical monomodal small-particle distributions	53
4.3.2 Monomodal large-particle size distributions	55
4.3.3 Bimodal ice crystal size distributions	58
4.3.4 Ice crystals embedded in water clouds	64
4.4 <i>Summary</i>	65
CHAPTER 5: The Effect of Cloud Geometry upon the Radiative Characteristics of Finite Clouds	
—RONALD M. WELCH, STEPHEN K. COX AND JOHN M. DAVIS	67
5.1 <i>Cloud sizes</i>	67
5.2 <i>Cloud geometry</i>	67
5.3 <i>Monte Carlo calculational procedure</i>	68
5.4 <i>Calculations for finite clouds</i>	70
5.4.1 The effect of cloud geometry upon the radiation field	70
5.4.2 Monomodal drop size distributions	74
5.4.3 Bimodal drop size distributions	76
5.4.4 Simulation of cloud radiative characteristics deduced from aircraft flux observations	77
5.5 <i>Summary</i>	80
CHAPTER 6: The Effect of Vertical and Horizontal Cloud Microstructure Inhomogeneities upon the Radiative Characteristics of Cloud Layers	
—RONALD M. WELCH, STEPHEN K. COX AND JOHN M. DAVIS	81
6.1 <i>Vertical cloud structure</i>	81
6.2 <i>Holes in finite clouds</i>	82
6.3 <i>Holes in infinite clouds</i>	84
6.4 <i>Random horizontal and vertical inhomogeneities in finite clouds</i>	85
6.5 <i>Random horizontal inhomogeneities in plane-parallel clouds</i>	86
6.6 <i>Finite clouds with cores (rainshowers) of large drops</i>	87
6.7 <i>Plane-parallel clouds with regions of rainshowers</i>	88
6.8 <i>Summary</i>	89
