

The book cover features a background image of a landscape under a dramatic sky. The sky transitions from a deep purple at the top to a dark blue and then a greyish-blue towards the horizon. A large, dark, textured cloud formation is visible in the upper right. In the foreground, a single, large, dark tree stands on a flat, grassy plain. The overall mood is atmospheric and somewhat somber.

## PART I—PRECIPITATION PROCESSES

CHAPTER ONE	Water in the Atmosphere	3
1.1	Introduction	3
1.2	The Global Picture	5
1.2.1	The vertical distribution of water and water vapour	5
1.2.2	Atmospheric water and water vapour in the broader context	6
1.2.3	Water, water vapour and the general circulation of the atmosphere	7
1.3	Atmospheric Water as a Part of the Hydrological Cycle	15
1.3.1	Changes of state	15
1.3.2	Latent heat	17
1.3.3	Temperature and water vapour content	19
1.3.4	Determination of water vapour content	21
1.4	Evaporation, Transpiration and Evapotranspiration	23
1.4.1	Evaporation from an open water surface	24
1.4.2	Evaporation from a soil surface	26
1.4.3	Evapotranspiration—water loss from vegetated surfaces	27
1.4.4	Some facts and misconceptions	28
1.4.5	Evapotranspiration—a summary	32
1.5	Measurement and Determination of Evaporation and Transpiration	32
1.5.1	Theoretical derivation of evaporation rates	33
1.5.2	Estimates of evaporation and potential evapotranspiration	35
1.5.3	Indirect measurement of evapotranspiration	36
1.5.4	Direct measurement of open water evaporation	37

1.5.5 The relationship between actual water loss, potential evapotranspiration and estimated evaporation	40
<i>References</i>	41
<i>Suggested Further Reading</i>	42
CHAPTER TWO     The Formation of Clouds	44
2.1 Setting the Stage	44
2.1.1 The backdrop—clouds and the atmosphere	44
2.1.2 The smallest player—cloud condensation nuclei	47
2.1.3 The formation of cloud droplets	50
2.1.4 Ice in clouds	52
2.2 Uplift in the Atmosphere	55
2.2.1 The physical basis	55
2.2.2 Atmospheric stability and instability	61
2.2.3 The tephigram	66
2.2.4 Turbulence	72
2.3 Cloud Types and Morphology	74
2.3.1 Scales of cloud development	74
2.3.2 Cumuliform clouds	86
2.3.3 Stratiform clouds	95
2.3.4 Orographic clouds	100
<i>References</i>	103
<i>Suggested Further Reading</i>	105
CHAPTER THREE     Precipitation Formation	107
3.1 'Not All Clouds Precipitate'	107
3.1.1 Theoretical prospects	107
3.1.2 Precipitation processes within warm clouds	110
3.1.3 Processes in cold clouds	116
3.1.4 The Bergeron–Findeisen Process	120
3.1.5 Artificial stimulation of precipitation	123
3.2 Precipitation Form	127
3.2.1 Rain and drizzle	128
3.2.2 Solid forms of precipitation	131
3.2.3 Dew and frost	134
3.2.4 Mist and fog	135
3.3 Precipitation Characteristics	137
3.4 Precipitation Type	140
3.4.1 Convective precipitation	140
3.4.2 Cyclonic precipitation	141
3.4.3 Orographic precipitation	142

6.3 Monsoon Circulations	262
6.4 Longer Term—Larger Scale Precipitation Variations in the Tropics	268
<i>References</i>	272
<i>Suggested Further Reading</i>	276

## PART II—PRECIPITATION AT THE GROUND

CHAPTER SEVEN Precipitation Measurement and Observation	281
7.1 Measurement by Gauges	282
7.1.1 Errors in measurement—instrumental errors	283
7.1.2 Errors in measurement—site and locational errors	284
7.1.3 Gauge design	289
7.1.4 Areal representativeness and network design	301
7.1.5 Snow measurement	305
7.1.6 Occult precipitation	310
7.2 Measurement by Ground-based Radar	311
7.2.1 Radar technology	312
7.2.2 The UK rainfall radar network	316
7.3 Measurement by Satellite	320
7.3.1 Types of satellite	320
7.3.2 Types of observation and methods of use	323
<i>References</i>	332
<i>Suggested Further Reading</i>	335
CHAPTER EIGHT Precipitation Analysis in Time	337
8.1 Precipitation Climatologies	339
8.1.1 Annual variation	339
8.1.2 Intra-annual variation	340
8.1.3 Daily variation	345
8.1.4 Diurnal variation	347
8.2 Trends and Oscillations	350
8.3 System Signatures	359
8.3.1 Short-term intensities	361
8.3.2 The mass curve	362
8.3.3 Intensity–duration relationships	366
8.4 Probability Studies	370
8.4.1 The statistics of extremes	372
8.4.2 Alternative methods	376
8.4.3 Binomial probabilities	377
8.4.4 Conditional probabilities	380
8.5 Probable Maximum Precipitation (PMP)	383

<i>References</i>	387
<i>Suggested Further Reading</i>	393
CHAPTER NINE      Precipitation Analysis in Space	396
9.1 Mapping Precipitation	398
9.1.1 Point and areal rainfalls	398
9.1.2 The use of isohyets	401
9.1.3 Estimating missing precipitation records	402
9.2 Areal Mean Precipitation	402
9.2.1 Isohyetal method	403
9.2.2 Geometric methods	407
9.3 The Spatial Organization of Precipitation	410
9.3.1 Characteristics of the basic single cell storm	411
9.3.2 Storm development, movement and decay	417
9.3.3 Spatial correlation	422
9.3.4 The establishment of precipitation areas	427
<i>References</i>	435
<i>Suggested Further Reading</i>	439
<i>Appendix 1</i>	442
<i>Appendix 2</i>	444
<i>Index</i>	445
