Contents

Chapter 1. INTRODUCTION

by S. ORVIG

Chapter 2. THE CLIMATE OF GREENLAND

by P. PUTNINS

Introduction	3
Weather dynamics in the Greenland area.	5
Greenland's role in the general atmospheric circulation.	5
Winter, 8 — Summer, 8	
Development of disturbances in the Greenland area and the problem of disturbances crossing the ice cap	21
Lows around and near Greenland	25
Cyclogenesis and stationary fronts.	30
The climate of the ice cap	32
Ice	32
Air pressure	32
Wind	33
Temperature	37
Inversions	57
Cloudiness	60
Precipitation	61
Humidity	64
Evaporation	65
Fog and visibility	65
White-out	66
Sunshine and radiation	67
General description of the ice cap climate	70
Upper air conditions	72
The tropopause over the ice cap	78
The climate of the coastal region	80
Introduction	80
Air pressure	81
Wind	82
Foehn, 85	
Temperature	86
Extreme temperatures, 92—Number of days with $t_{\min} \leq 0^{\circ}\text{C}$, $t_{\min} > 0^{\circ}\text{C}$, $t_{\max} \leq 0^{\circ}\text{C}$, 95	

Humidity	96
Cloudiness	96
Fog	97
Precipitation	98
Climatic trends	99
References	108
Other sources	112
Climatic tables	113

Chapter 3. THE CLIMATE OF THE NORTH POLAR BASIN

by E. VOWINCKEL and S. ORVIG

Introduction	129
Surface conditions	132
Surface reflectivity	132
Thermal diffusivity	134
Heat content of the ice	136
Clouds and radiation	141
Cloud amount and type	141
Norwegian-Sea type, 142—East-Siberian type, 143—Polar-Ocean type, 143	
Seasonal cloud conditions	144
Cloud effects on solar radiation	150
Insolation and absorbed solar radiation	153
Long wave radiation	159
The greenhouse effect	160
The radiation balance	162
At the surface, 162—The radiation balance of the troposphere, 167—Total radiation balance of surface and troposphere, 169	
Evaporation and sensible heat exchange	171
Evaporation	172
Sensible heat flux	175
Ocean circulation and heat transport	177
The Atlantic inflow, 178—Bering Strait, 178—Runoff and precipitation, 179—Denmark Strait export, 180—Davis Strait, 180	
The water balance and heat flux	180
Heat gain by ice transport, 181—The total heat gain, 183	
Heat flux through the pack ice	184
Atmospheric circulation and advection	185
The synoptic picture	186
The troposphere	190
The tropopause and lower stratosphere	194
Climatic features of the Polar Basin	198
Surface temperature	198
The temperature inversion	203
Fog, precipitation and snow cover	206
Surface pressure and wind	209

The heat budget and stability of the Polar Ocean climate	214
The heat budget	214
Climate change	218
References	222
Climatic tables	226

Chapter 4. THE CLIMATE OF THE ANTARCTIC

by W. SCHWERTFEGER

Introduction	253
Radiation and temperature regime	256
The radiation balance	256
Average temperature conditions and meridional temperature gradients	261
Aperiodic and periodic temperature variations	268
Extreme values and their possible errors	271
The surface inversion	273
The maintenance of the inversion and the coreless winter	276
The role of warm air advection	277
Pressure and wind.	280
Average conditions, circulation pattern, and meridional gradients	280
Surface winds over the Antarctic Plateau in relation to the temperature inversion	286
The climatic significance of the surface wind regime	291
Katabatic winds and blizzards	291
Hydrometeors	294
Moisture conditions	294
Cloudiness	298
Precipitation and accumulation	300
Drifting and blowing snow	303
Annual budgets and related problems	307
The ice mass budget	307
The heat budget of the Antarctic atmosphere	309
Periodic variations of atmospheric mass over the Antarctic continent	311
Climate change since the beginning of Southern Polar exploration	312
The subantarctic ocean	312
The continent	314
Brief comments and bibliographic references on various climatological topics	316
Variable atmospheric constituents	316
The spring warming of the stratosphere	318
Cooling power as a climatic index	320
The Antarctic Peninsula as a climatic divide	320
Other regional climatic peculiarities	322
Acknowledgements	323
References	324
Climatic tables	331
