TABLE OF CONTENTS

PREFACE: <i>N.-A. Mörner & W. Karlén</i>	xi
ACKNOWLEDGEMENTS	xiii
LIST OF CONTRIBUTORS	xv
Climatic changes on a yearly to millennial basis: An introduction: <i>N.-A. Mörner</i>	1
I. THE DEGLACIATION PERIOD	
Late Weichselian deglaciation and chronostratigraphy of Southern Scandinavia: Problems and present "state of the art": <i>B.E. Berglund & N.-A. Mörner</i>	17
Biotic response to climatic changes during the time span 13,000-10,000 BP - A case study from SW Sweden: <i>B.E. Berglund, G. Lemdahl, B. Liedberg-Jönsson & T. Persson</i>	25
Climatic changes at Pleistocene/Holocene boundary in the Middle Swedish Endmoraine zone, mainly inferred from stratigraphic indications: <i>S. Björck & G. Digerfeldt</i>	37
Cyclic lamination in proximal varves reflecting the length of summers during Late Weichsel in southern- most Sweden: <i>B. Ringberg</i>	57
Late Weichselian sea-levels and fauna communities in northern Vendsyssel, Jutland, Denmark: <i>K.S. Petersen</i>	63
Flora, fauna and stable isotopes in Late-Würm deposits at Lobsigensee (Swiss Plateau): <i>B. Ammann, L. Chaux, U. Eicher, S.A. Elias, M.-J. Gaillard, W. Hofmann, U. Siegenthaler, K. Tobolski & B. Wilkinson</i>	69

Late Weichselian fluctuations in the French Alps and Massif Central from pollen analyses: <i>J.-L. de Beaulieu, J. Clerc & M. Reille</i>	75
Climatic and glacial fluctuations during the Late-Glacial and the Holocene in Oisans (Isere, France): <i>M. Coüteaux</i>	91
The classical Late Weichselian climatic fluctuations in Mexico: <i>K. Heine</i>	95
Climatic variations in the low continental latitudes during the last 30,000 years: <i>M. Servant</i>	117
II. THE HOLOCENE	
Late-Glacial - Holocene High-frequency climatic changes in deep-sea cores from the Denmark Strait: <i>T.B. Kellogg</i>	123
The reflection of abrupt climatic changes in the relief and sequence of continental deposits: <i>L. Starkel</i>	135
Water-level changes, climate and human impact: A palaeo-hydrological study of Krageholm Lake (Scania), southern Sweden: <i>M.-J. Gaillard</i>	147
Trees and shrubs in the Shetland Islands. Evidence for a Postglacial climatic optimum?: <i>J. Birnie</i>	155
Holocene palaeo-winds and climatic changes in West Greenland as indicated by long-distance transported and local pollen in lake sediments: <i>B. Fredskild</i>	163
Peat inception and climatic change in northern Quebec: <i>S. Payette</i>	173
The Nile floods as a global climatic/solar proxy: <i>R.W. Fairbridge</i>	181
Rainfall patterns and lake level variations at Lake Chad: <i>D. Jäkel</i>	191
Tropical peats: Hydrogeologic and climatic control: <i>H. Faure, J.Y. Gac, C. Hillaire-Marcel, A.M. Lezine, J. Monteillet, P.M. Ngom, G. Pezeril & J.L. Saos</i>	201
Causes of a Late-Atlantic swamp-forest submergence in the central Rhine/Meuse delta: <i>O. van de Plassche</i>	205

Late Postglacial beach ridges on the island of Gotland, Sweden, as indicators of a probable periodicity in the climate: <i>A. Philip</i>	215
Size variations in Atlantic, Subboreal and modern moose teeth: <i>E. Iregren</i>	219
III. THE LAST 1,500 YEARS	
Climate and history in northern Europe and elsewhere: <i>H.H. Lamb</i>	225
Settlement expansion - settlement contraction: A question of war, plague, ecology or climate?: <i>B. Ambrosiani</i>	241
Climatic reflection in varved lake sediments: <i>I. Renberg, U. Segerström & J.-E. Wallin</i>	249
Sunspot cycles and global oscillations: <i>D.J. Schove</i>	257
Dendrochronology in Sweden: <i>T.S. Bartholin</i>	261
Dendrochronology, mass balance and glacier front fluctuations in northern Sweden: <i>W. Karlén</i>	263
Dendroclimatological studies at the northern timberline: <i>R.W. Aniol & D. Eckstein</i>	273
Limitations of ^{14}C dates from buried soils in reconstructing glacier variations and Holocene climate: <i>J.A. Matthews</i>	281
Climate and glaciation in Kong Karls Land, eastern Svalbard: <i>B. Holmgren, I. Olsson, E. Skye & G. Alm</i>	291
Questions arising when using lichen for ^{14}C measurements in climatic studies: <i>I.U. Olsson, B. Holmgren & E. Skye</i>	303
Some studies of the Little Ice Age of recent centuries and its great storms: <i>H.H. Lamb</i>	309
The potential of documentary data for the reconstruction of past climates. Early 16th to 19th century. Switzerland as a case study: <i>C. Pfister</i>	331
A contribution to the reconstruction of weather in central Europe at the end of the 16th century (with regard to meteorological observations of Tycho de Brahe on Hven): <i>J. Munzar</i>	339

The impact of climate on grass growth and hay yield in Iceland: A.D. 1601 to 1780: <i>A.E.J. Ogilvie</i>	343
Climatic changes during recent centuries as indicated by dendrochronological studies, Mount Baker, Washington, U.S.A.: <i>O. Heikkinen</i>	353
The cold winter 1808-1809: A russian force crosses the ice-bound Gulf of Bothnia and takes (the first?) air-temperature measurements in history for purposes of a military operation: <i>S. Lindgrén & J. Neumann</i>	363
On the availability and homogeneity of instrumentally observed climatological records: <i>R. Heino</i>	365
Climate variation in northern Europe during the past century - evidence from a Danish record: <i>E.W. Peterson & S.E. Larsen</i>	371
Certain relationships between lake level variations and some climatic factors in Finland: <i>R. Keränen</i>	381
Long-term variations in some physical parameters of the Baltic Sea: <i>L. Makkonen, J. Launiainen, K. Kahma & P. Alenius</i>	391
Strategies for assessing impacts of climatic change in marginal areas: <i>T.R. Carter & M.L. Parry</i>	401
 IV. MODELS AND MECHANISMS	
Mechanism for linking solar activity to weather-scale effects, climatic changes and glaciations in the Northern Hemisphere: <i>V. Bucha</i>	415
Solar ultraviolet irradiance variations and the Earth's atmosphere: <i>J.L. Lean</i>	449
Cycles of solar flares and weather: <i>T. Landscheidt</i>	473
Planetary, solar, atmospheric, hydrospheric, and endo-gene processes as origin of climatic changes on the Earth: <i>N.-A. Mörner</i>	483
Planetary periodicities and terrestrial climate stress: <i>R.W. Fairbridge</i>	509
A possible mechanism of abrupt climatic changes: <i>H. Flohn</i>	521

TABLE OF CONTENTS

ix

Sea surface temperature, atmospheric CO ₂ and the global energy budget: some comparisons between the past and present: <i>R.E. Newell & J. Hsiung</i>	533
The effect of atmospheric and oceanic energy transports in climatic balance: <i>H. Savijärvi</i>	563
Possible CO ₂ -induced warming effects on the cryosphere: <i>R.G. Barry</i>	571
The nature and significance of cloud-cryosphere interactions in the marginal snow and ice zones: <i>R.G. Barry</i>	605
Climatic belts in the case of a unipolar glaciation: <i>H. Flohn</i>	609
Energy-flow budgets in aquatic ecosystems and the conflict between biology and geophysics about Earth-axis tilt: <i>G.H. Petersen</i>	621
EPILOGUE	
Climatic changes on a yearly to millennial basis. Concluding remarks: <i>N.-A. Mörner</i>	637
INDEX	653
