<i>Preface</i>	page vii
<i>Acknowledgements</i>	ix
<i>Abbreviations</i>	xi
<b>1 Introduction</b>	1
1.1 Background	1
1.2 The factors involved in climate change	5
1.3 Natural factors affecting climate change	11
1.4 Nuclear war and climate	24
1.5 The World Climate Programme	25
1.6 On the perspective concept of climate change studies	33
<b>2 The observed regularities of climate</b>	39
2.1 The CO <sub>2</sub> cycle and global-scale climate changes from observational data	39
2.2 Detecting the CO <sub>2</sub> signal	75
2.3 A global system of observations	95
<b>3 The World Climate Research Programme (WCRP)</b>	141
3.1 Fundamental principles of the WCRP	142
3.2 The Global Energy and Water Cycle Experiment (GEWEX)	148
<b>4 Principal climatically-important processes</b>	157
4.1 Cloudiness and radiation	157
4.2 Processes in the ocean	198
4.3 The Arctic, the Antarctic and climate	206
4.4 Land surface processes	232
4.5 Optically-active minor gaseous components	249
4.6 Aerosols and climate	270
4.7 Solar-terrestrial interrelations	291
4.8 Development, verification and application of climate models	312
4.9 The comparative climatology of planets	319

<b>5 The internal variability of the climatic system</b>	327
5.1 Climate diagnostics	327
5.2 The theory of short-term climate changes	343
5.3 The Sections programme	358
5.4 The world ocean and climate	365
5.5 Nested climate models	381
<b>6 External impacts on the climatic system</b>	387
6.1 Carbon dioxide and climate	387
6.2 The multifaceted nature of the atmospheric greenhouse effect	419
6.3 Volcanoes and climate	449
<b>7 Conclusion</b>	487
<i>References</i>	493
<i>Index</i>	553
