

# Micrometeorology

A STUDY OF PHYSICAL  
PROCESSES IN THE LOWEST  
LAYERS OF THE EARTH'S ATMOSPHERE

O. G. Sutton C.B.E., F.R.S., D.Sc.

DIRECTOR OF THE METEOROLOGICAL OFFICE; LATELY DEAN OF THE  
ROYAL MILITARY COLLEGE OF SCIENCE, ENGLAND

NEW YORK · TORONTO · LONDON  
McGRAW-HILL BOOK COMPANY, INC.

1953

## CONTENTS

PREFACE	vii
INTRODUCTION	xi
1. The Atmosphere at Rest	1
Constitution and Physical Properties. Water Vapor. The Hydrostatic Equation and the Variation of Pressure with Height. The Variation of Density with Height. The Variation of Temperature with Height. The Significance of the Adiabatic Lapse Rate. Bibliography.	
2. The Atmosphere in Motion. (1) Laminar Flow	14
General Aspects of Motion near the Surface of the Earth. Kinematics of Inviscid Fluids. Air Flow over Undulating Country. Winds on a Rotating Earth. Viscosity and Its Effects. The Equations of Motion of a Viscous Fluid. Flow near a Plane Surface. The Theory of the Laminar Boundary Layer. Application of the Boundary-layer Theory to Flow over a Plane Surface. Bibliography.	
3. The Atmosphere in Motion. (2) Turbulent Flow	56
General Aspects of Turbulence. The Origin of Turbulence. The Basic Mathematical Theory of Turbulent Motion. The Analogy with Molecular Processes. Exchange Coefficients. The Approach to the Geostrophic Wind. Further Development of the Molecular Analogy; Mixing-length Theories. The Turbulent Boundary Layer. The Velocity Profile in the Turbulent Boundary Layer in Relation to the Mixing-length Hypothesis. Modifications of the Profile Equations for Fully-rough Surfaces. The Validity of the Exchange-coefficient and Mixing-length Hypotheses. The Vorticity-transfer Hypothesis. Statistical Theories of Turbulence. The Similarity Theory of Turbulence. Bibliography.	
4. Heat Transfer and Problems of Diffusion	105
Mathematical Theory of the Conduction of Heat. Simple Diffusion Processes. Boundary Conditions. The Laminar Thermal Boundary Layer. Free Convection. Problems of Fickian Diffusion. Heat	

	Transfer by Turbulence. Mixing-length Theory in Free Convection. The Effect of Density Gradient on Turbulence. Bibliography.	
5. Radiation		158
	Fundamental Relations. Short-wave Radiation. Long-wave Radiation. Prediction of Night Minimum Temperatures. Bibliography.	
6. The Temperature Field in the Lowest Layers of the Atmosphere		190
	General Features. Surface Conditions. Temperature Profiles. Analysis of Observations of Temperature near the Surface. Theoretical Treatment of Heat Transfer in the Lower Layers. Bibliography.	
7. Problems of Wind Structure near the Surface		229
	General Features of the Surface Velocity Field. Wind Profiles. The Approach to the Geostrophic Wind. Detailed Study of Wind near the Surface. Effects of Stabilizing Density Gradients. Winds of Local Origin. Bibliography.	
8. Diffusion and Evaporation		273
	Characteristics of Clouds from Artificial Sources. Theoretical Studies of Diffusion from Artificial Sources. Diffusion Formulas in Field Work. Diffusion from Elevated Sources. The Free-convection Jet in the Atmosphere. Theoretical Study of Evaporation. Observations of Evaporation. Comparison of the Exchange Coefficients for Momentum, Heat, and Matter. Diffusion in the Similarity Theory of Turbulence. Bibliography.
