The radiation regime and architecture of plant stands

Dr W. Junk Publishers

The Hague-Boston-London 1981

Contents

PREFACE BY T:VS SERIES EDITOR	V
PREFACE BY I. A. SHULGIN	VII
AUTHOR'S PREFACE TO ENGLISH TRANSLATION	XI
LIST OF MAIN SYMBOLS	XIX
INTRODUCTION	1

Part one: Plant stand architecture

I.1 ROLE OF PHYTOMETRIC INVESTIGATIONS IN THE STUDIES OF PLANT STAND ARCHITECTURE AND RADIATION REGIME	9
I.2 PRINCIPAL PHYTOMETRIC CHARACTERISTICS OF STANDS	12
I.2.1 Phytometric characteristics of leaf and other plant organs	12
I.2.2 Phytometric characteristics of an individual plant	15
I.2.3 Phytometric characteristics of a pure stand	24
I.2.4 Plant stand as a horizontal layer	30

I.3	PHYTOMETRICAL METHODS	36
I.3.1	Determination of leaf area	36
I.3.2	The measurement of leaf orientation.	41
I.3.3	Inclined point quadrats method	42
I.3.4	Stratifying clip method	45
I.3.5	The methods of statistical measurements.	46
I.3.6	Numerical methods for determination of foliage area vertical distribution	47
I.3.7	A rational method for determining phytometric characteris- tics of stand architecture and productivity	53
I.4	STATISTICAL CHARACTERISTICS OF A STAND	55
I.4.1	Parameters of statistical characteristics	55
I.4.2	Correlation between statistical characteristics.	61
I.5	SPATIAL DISTRIBUTION OF PHYTOELEMENTS IN STANDS	66
I.5.1	General.	66
I.5.2	Space-time variability of transition functions	67
I.5.3	Vertical distribution of phytomass and phytoarea	69
I.5.4	Horizontal distribution of phytomass and phytoarea.	87
I.6	FOLIAGE AREA ORIENTATION IN STANDS	90
I.6.1	General.	90
I.6.2	Distribution functions of leaf inclination and azimuth orientation	92
I.6.3	G-function of leaf orientation	116
I.7	PLANT STAND ARCHITECTURE, PHOTOSYNTHESIS AND PRODUCTIVITY	122

Part two: Radiation regime in plant stand

II.1	RADIATION FIELD IN A PLANT STAND AND THE PROBLEM OF ITS MATHEMATICAL MODELLING.	127
II.1.1	General.	127
II.1.2	Basic characteristics of the radiation field	129
II.1.3	Optical characteristics of phytoelements	134
II.1.4	Optical characteristics of plate medium	138
II.1.5	The radiation transfer equation for an optically anisotropic plate medium	143

II.1.6	Plant stand as a plate medium	144
II.1.7	The radiation transfer equation for a plant stand	146
II.1.8	Leaf and plant stand absorption functions	154
II.1.9	Statistical character of the radiation field in plant stands	156
II.2	INCIDENT RADIATION	159
II.2.1	General.	159
II.2.2	Incoming direct solar radiation.	159
II.2.3	Incoming diffuse sky radiation	161
II.2.4	Incoming total solar radiation	165
II.2.5	Incoming long-wave radiation of the atmosphere	166
II.2.6	Photosynthetically active radiation	167
II.3	OPTICAL PROPERTIES OF PHYTOELEMENTS.	175
II.3.1	General.	175
II.3.2	Optical models of the leaf	176
II.3.3	Scattering phase function of the leaf.	178
II.3.4	Spectral optical properties of phytoelements	181
II.3.5	Integral coefficients of leaf reflection, transmission and absorption for short-wave radiation and PAR	184
II.3.6	Optical properties of phytoelements in the long-wave spectral region	186
II.4	PENETRATION OF DIRECT SOLAR RADIATION INTO A PLANT STAND	188
II.4.1	General.	188
II.4.2	Statistical character of penetration of direct radiation in a plant stand. Penumbras	188
II.4.3	Theoretical expressions for direct solar radiation penetration	192
II.4.4	Penetration theory for direct solar radiation in horizontally inhomogeneous plant stands	200
II.4.5	Calculated penetration of direct solar radiation and its dependence on various factors	215
II.4.6	Methods of experimental investigation.	221
II.4.7	Experimental data on penetration.	227
II.5	PENETRATION OF DIFFUSE SKY RADIATION INTO PLANT STAND	239
II.5.1	General.	239
II.5.2	Penetration formulae	239
II.5.3	Calculation of intensities and zonal radiation	241
II.5.4	Calculation of downward fluxes	244

II.5.5	Method of hemispherical photographs.	248
II.5.6	Statistical character of the penetration of diffuse sky radiation	251
II.6	SCATTERING OF RADIATION INSIDE PLANT STANDS.	253
II.6.1	General.	253
II.6.2	Scattering and absorption coefficients for an elementary volume in a plant stand. Scattering phase function.	254
II.6.3	Solution of radiation transfer equation for horizontal leaves.	258
II.6.4	The Schwarzschild approximation for modified radiative transfer equation.	261
II.6.5	Approximation for single scattering	267
II.6.6	Leaf scattering coefficient ω_L and the complementary radiation field	
II.6.7	Calculation of the complementary PAR field	273
II.6.8	Calculation of the complementary NIR field	278
II.7	TOTAL RADIATION FIELD IN PLANT STANDS	282
II.7.1	General.	282
II.7.2	Intensities of total radiation field	282
II.7.3	Total vertical fluxes.	284
II.7.4	Angular distribution of total radiation flux	291
II.7.5	Leaf absorption in total radiation field.	295
II.7.6	Radiation in a plant stand with horizontal leaves	296
II.7.7	Errors of the approximate methods of calculation	298
II.7.8	New theories	304
II.7.9	Monte Carlo simulation models	308
II.8	SEMIEMPIRICAL FORMULAE FOR TOTAL RADIATION FLUXES	312
II.8.1	General.	312
II.8.2	Exponential and binomial semiempirical formulae.	313
II.8.3	New semiempirical formulae	316
II.9	ALBEDO OF PLANT STAND.	323
II.9.1	General.	323
II.9.2	Formulae for the albedo and brightness coefficient.	323
II.9.3	Albedo and its dependence on various factors.	329
II.9.4	Comparison of calculated and experimental data	334
II.10	CALCULATION OF LONG-WAVE RADIATION IN A STAND	336

II.11 NET RADIATION IN PLANT STANDS	344
CONCLUSION	355
SUPPLEMENT. DESCRIPTION OF FIELD EXPERIMENTS.	358
