Contents

1	Introduction	1
2	The Occurrence of Frost: Types, Distribution and Prediction ..	5
2.1	Frost Types	5
2.2	Distribution of Frost	6
2.3	Climatic Change and Frost	6
2.4	Frost Prediction	11
3	Micro-Scale Processes	13
3.1	Introduction	13
3.2	General Principles	14
3.3	Examples of Micro-Scale Processes	15
3.3.1	Cooling of the Ground Surface	15
3.3.2	Cooling of the Lower Atmosphere	20
3.3.3	One-Dimensional (Micro-Scale) Prediction Models	24
3.3.4	Plant Temperatures	26
3.3.5	Energy Balance Model for Leaf Temperature Prediction	27
4	Meso-Scale Processes	32
4.1	General Characteristics of Nocturnal Cooling: A Case Study ..	32
4.2	Katabatic Drainage	35
4.3	Ventilation and Stagnation	38
4.4	Drainage, Ventilation and Stagnation Effects in Relation to Observational Data	39
4.5	Development of Nocturnal Inversion Layer	41
4.6	A Boundary Layer Model for Frost Prediction	42
5	Regional Scale Frost Risk Mapping	44
5.1	Introduction	44
5.2	A Three-Dimensional Numerical Model for Frost Risk Mapping	48

5.3	Frost Risk Mapping for Landscape Planning: A Case Study	49
5.3.1	Development of a Simple Elevation Model	49
5.3.2	Evaluation of a Simple Elevation Model	51
5.3.3	The Role of Local Terrain	53
5.3.4	Application of the Mapping Technique	57
6	Remote Sensing for Frost Risk Mapping and Frost Prediction	61
6.1	Introduction	61
6.2	Aircraft Thermal Imagery	62
6.3	Satellite Thermal Imagery	63
6.4	Satellite Data for Frost Forecasting	65
7	Biological and Phenological Aspects of the Relationship Between Low Temperature, Plant Growth and Crop Development	66
7.1	Plant Hardiness	66
7.2	Low Temperature as Plant Stress	67
7.3	Mechanisms of Frost Resistance	68
7.4	Chilling Damage to Extra-Tropical and Tropical Crops	70
7.5	Seasonal Variation in Cold Resistance	70
7.6	Rest Breaking Mechanisms and Chilling Requirements	71
8	Weather and Winterkill of Wheat: A Case Study	73
8.1	Introduction	73
8.2	Procedures and Results	74
8.2.1	Winterkill Index: Definition, Distribution and Variability	74
8.2.2	Weather Data	75
8.2.3	Method of Statistical Analysis	76
8.2.4	Associations of Wheat Winterkill and Weather Conditions	78
9	Direct, Active Methods of Frost Protection	83
9.1	Introduction	83
9.2	Heaters	84
9.3	Wind Machines	87
9.4	Fog	89
9.5	Sprinkler Irrigation	91
10	A Model to Predict Required Rates of Water Application in Overhead Sprinkler Irrigation	99
10.1	Model Development	99
10.2	Model Validation	102
10.3	Application to "Pulsed" Frost Protection	105

11	Indirect, Passive Methods of Frost Protection	109
11.1	Cultivar Selection	109
11.2	Agronomic Management Techniques	109
11.2.1	Introduction	109
11.2.2	Soil Moisture and Frost Control	111
11.2.3	Chemicals for Frost Control	111
11.2.4	Control of Ice Nucleating Bacteria	112
11.2.5	Some Other Management Practices	113
11.3	Manipulating Plant Phenology	114
11.3.1	Introduction	114
11.3.2	Sprinkling to Reduce Bud Temperatures	115
11.3.3	Changing Phenology by the Use of Chemicals	116
11.3.4	Changing Phenology by Cultural Practices and Siting	116
11.3.5	Phenology and Models of Crop Development	117
12	Concluding Remarks	120
	Acknowledgements	122
	References	123
	Subject Index	139
